This document was prepared by the NASA Scientific and Technical Information Facility operated for the National Aeronautics and Space Administration by RMS Associates. It is available from the NASA Scientific and Technical Information Facility, P.O. Box 8757, Baltimore, Maryland 21240, at \$10.00 per copy. Make checks payable to "RMS Associates."

INTRODUCTION

Tech Briefs are short announcements of new technology derived from the research and development activities of the National Aeronautics and Space Administration. These briefs emphasize information considered likely to be transferrable across industrial, regional, or disciplinary lines and are issued to encourage commercial application.

This *Index to NASA Tech Briefs* contains abstracts and four indexes — subject, personal author, originating Center, and Tech Brief Number — for 1984 Tech Briefs.

Availability of NASA Tech Briefs

Distribution of *NASA Briefs*, a bi-monthly free publication, is limited to engineers in U.S. Industry and to other domestic technology transfer agents.

Requests for individual Tech Briefs or for copies of the bi-monthly publication should be addressed to the Manager, Technology Transfer Office, P.O. Box 8757, Baltimore/Washington International Airport, Maryland 21240.

If you are seeking any information on NASA's Technology Utilization Program, its documents and services, please call (301) 859-5300, Ext. 241 or 243.

The January 1982 edition of the *NASA Thesaurus* (NASA SP-7051) is used as the authority for the indexing vocabulary that appears in the subject index. The *NASA Thesaurus* should be consulted in examining the current indexing vocabulary, including associated cross-reference structure. Only the subject terms that have been selected to describe the documents abstracted in this issue appear in the subject index. Copies of the *NASA Thesaurus* may be obtained from the National Technical Information Service at \$35.00 for Volume 1 and \$20.00 for Volume 2.

TYPICAL ABSTRACT ENTRY

Index to 1984 NASA Tech Briefs

FEBRUARY 1987

Abstract Section

01 ELECTRONIC COMPONENTS AND CIRCUITS

B84-10001

BATTERY-OPERATED HIGH-VOLTAGE POWER SUPPLY

A. P. RUITBERG and M. KENNETH

Jan. 1985

GSC-12818

Vol. 8, No. 3, P. 313

Circuitry allows large multiplication of voltage. Filament voltage is -80kV. Potential difference between terminals P3 and P4 adjusted to make grid 80 to 150 volts more negative than filament enabling grid to focus electrons from filament into stream impinging on anode, which then emits x-rays. Circuitry provides independently adjustable voltages in kilovolt range for x-ray tubes and other instruments.

B84-10002

X-BAND STRIP-LINE POWER DIVIDER/COMBINER

B. L. CONROY (CALTECH)

Jan. 1985

NPO-16086

Vol. 8, No. 3, P. 314

Strip-line circuit for X-band signals both divides and combines microwave power for distributed amplifier. Strip-line pattern (foil pattern over insulating layer over ground plane) laid out so all eight distributed ports lie at electrical distances of odd integral multiples of half wavelength from main input/output port. Strip line used as power divider and as power combiner.

B84-10003

OPTICAL LOGIC GATES

E. R. DU FRESNE (CALTECH) and W. L. DOWLER (CALTECH)

Jan. 1985

NPO-15134

Vol. 8, No. 3, P. 314

Logic gates for light signals constructed from combinations of prisms, polarizing plates, and quarterwave plates. Optical logic gate performs elementary logic operation on light signals received along two optical fibers. Whether gate performs OR function or exclusive-OR function depends on orientation of analyzer. Nonbinary truth tables also obtained by rotating polarizer or analyzer to other positions or inserting other quarter-wave plates.

B84-10004

TUNING CONCEPT FOR RESONANT CAVITIES

R. L. SYDNOR (CALTECH)

Jan. 1985

NPO-15890

Vol. 8, No. 3, P. 315

Deviations from resonance detected by sampling phases. Automatic tuner feedback control system derives error signal from E and H plane probe signals. Control objective

to maintain phase difference between E and H at 90 degrees. Technique estimated to sensitive to fractional frequency deviation of about 5×10^{-16} and applicable not only to masers but also other microwave elements, including klystrons, general purpose oscillators, and frequency standards.

B84-10005

ISOLATION MOUNTING FOR CHARGE-COUPLED DEVICES

W. C. GOSS (CALTECH) and P. M. SALOMON (CALTECH)

Jan. 1985

NPO-15551

Vol. 8, No. 3, P. 316

CCD's suspended by wires under tension. Remote thermoelectric cooling of charge coupled device allows vibration isolating mounting of CCD assembly alone, without having to suspend entire mass and bulk of thermoelectric module. Mounting hardware simple and light. Developed for charge-coupled devices (CCD's) in infrared telescope support adaptable to sensors in variety of environments, e.g., sensors in nuclear reactors, engine exhausts and plasma chambers.

B84-10006

SEMICONDUCTOR LASER PHASED ARRAY

J. KATZ (CALTECH)

Jan. 1985

NPO-15963

Vol. 8, No. 3, P. 317

Oscillations synchronized and modulated individually for beam steering. Phased array of GaAs infrared lasers put out powerful electronically-steerable coherent beam. Fabricated as integrated circuit on GaAs chip, new device particularly suited to optical communications, optical data processing and optical detection and ranging systems.

B84-10007

DIRECT-CURRENT UNBALANCE DETECTOR

A. P. WAGNER (CALTECH)

Jan. 1985

NPO-15978

Vol. 8, No. 3, P. 318

Short circuits to ground indicated by voltage changes. Current transducer connected in bridge circuit with floating 30-Vdc power supply measures voltage unbalance between positive and negative powerlines and ground. Detection circuit output swings higher or lower than normal balanced condition voltage to signify unbalance toward positive or negative side respectively. Circuit configuration adaptable to monitor 4- to 20-mA current loops often found in industrial controls.

B84-10008

CIRCUIT FOR MONITORING CELL VOLTAGES

J. W. LEPISTO (TRW, Inc.)

Jan. 1985

MFS-25924

Vol. 8, No. 3, P. 319

Circuit monitors voltage of each cell in electrical battery

01 ELECTRONIC COMPONENTS AND CIRCUITS

within few millivolts. Circuit includes two bipolar analog multiplexers: repeatedly sample outputs of 12 1.5 volt cells. Terminals of multiplexer 1 connected to positive sides of cells and terminals of multiplexer 2 connected to negative sides. Outputs of multiplexers connected to differential operational amplifier: provides signals for recording and display.

B84-10009

CIRCULARLY-POLARIZED MICROSTRIP ANTENNA

P. H. STANTON (CALTECH)

Jan. 1985

NPO-15875

Vol. 8, No. 3, P. 320

Microstrip construction compact for mobile applications. Circularly polarized microstrip antenna made of concentric cylindrical layers of conductive and dielectric materials. Coaxial cable feedlines connected to horizontal and vertical subelements from inside. Vertical subelement acts as ground for horizontal subelement.

B84-10010

POWERLINE COUPLER FOR WINDMILL MOTOR/GENERATORS

F. NOLA

Jan. 1985

MFS-25944

Vol. 8, No. 3, P. 321

Efficiency at low windspeed increased by firing-angle control. Power coupled from wind-driven induction motor/generator to ac powerline with help from circuit. Circuit reduces power consumed by field windings thereby improving efficiency at low windspeeds. Circuit includes zerocrossing detector, ramp generator and comparator similar to those used to set firing angles for thyristors in power factor motor controllers.

B84-10011

IMPROVED RF ISOLATION AMPLIFIER

G. L. STEVENS (CALTECH) and J. MACCONNELL (CALTECH)

Jan. 1985

NPO-16026

Vol. 8, No. 3, P. 322

Circuit has high reverse isolation and wide bandwidth. Wideband isolation amplifier has low intermodulation distortion and high reverse isolation. Circuit does not require selected or matched components or directional coupling device. Circuit used in applications requiring high reverse isolation such as receiver intermediate-frequency (IF) strips and frequency distribution systems. Also applicable in RF and video signaling.

B84-10012

DIGITAL SEQUENCE CONTROLLER

J. O. LONBORG (CALTECH)

Jan. 1985

NPO-15725

Vol. 8, No. 3, P. 323

Length and timing of pulse sequences user controlled. Digital circuit generates several pulse streams to control loads that must be synchronized allowing duration and phasing of each stream to be varied independently. Application of circuit to control pump for biomedical applications.

B84-10013

SOFTWARE FOR PROM PROGRAMING

C. W. GOOLSBY (Rockwell International Corp.)

Jan. 1985

MSC-20641

Vol. 8, No. 3, P. 323

Driver program allows for programing, reading, and verification of various PROM's. Manual entry of data to DATA/I/O PROM Programmer timeconsuming and error-prone. Driver program combines file management capability of EXORCISOR with flexibility of DATA I/O system. Provides user with way of reading, programing and verifying PROM's storing data on disk, modifying files and printing data.

B84-10014

COMPUTERIZED INTERACTIVE HARNESS ENGINEER-

ING

J. W. BILLITTI (CALTECH)

Jan. 1985

NPO-16272

Vol. 8, No. 3, P. 324

Computerized interactive harness engineering program inexpensive, interactive system for learning and using engineering approach to interconnection systems. Basically data-base system that stores information as files of individual connectors and handles wiring information in circuit groups stored as records.

B84-10015

ANTENNA RADIATION-PATTERN PROGRAM

R. D. HUGHES (CALTECH), C. N. GUIAR (CALTECH), and C. L. LAWSON (CALTECH)

Jan. 1985

NPO-16217

Vol. 8, No. 3, P. 324

Effects of reflector deformations and feed characteristics computed. JPL Antenna Radiation Pattern computer program ANRAD, evaluates performance of radio-frequency antenna with paraboloidal main reflector by solving scalar far-field radiation pattern integral.

B84-10016

TEMPERATURE-STABILIZED PHASE DETECTOR

L. YEEMAN

Jan. 1985

NPO-15766

Vol. 8, No. 3, P. 324

Precise temperature stabilized phase detector for clock signal distribution maintains 100-MHz signal with stability of 5 parts in 10 to the 16th power even for step changes of 20 degrees C in ambient temperature. Stabilization achieved by heating unit to 45 degrees C and maintaining temperature through bridge circuit.

B84-10017

NEGATIVELY COUPLED INDUCTORS FOR ODD-PHASE CHOPPERS

R. L. JAMIESON (CALTECH)

Jan. 1985

NPO-15380

Vol. 8, No. 3, P. 325

Splitting windings of output inductors of negatively-coupled 'boost' chopper extends applicability to odd number of phases including three phases. New version concatenates output inductors of each phase with those of neighboring phases achieving negative coupling effect that suppresses unwanted harmonics.

B84-10018

MATHEMATICAL STORAGE-BATTERY MODELS

C. P. CHAPMAN (CALTECH) and M. ASTON (CALTECH)

Jan. 1985

NPO-15615

Vol. 8, No. 3, P. 325

Empirical formula represents performance of electrical storage batteries. Formula covers many battery types and includes numerous coefficients adjusted to fit peculiarities of each type. Battery and load parameters taken into account include power density in battery, discharge time, and electrolyte temperature. Applications include electric-vehicle 'fuel' gages and powerline load leveling.

B84-10019

IMPROVED SPARK-IGNITOR CIRCUITRY

D. G. OLSCHANSKY (Rockwell International Corp.)

Jan. 1985

MFS-19751

Vol. 8, No. 3, P. 325

Transformer reduces flyback voltage 350 V. Several modifications made to inductive discharge spark-ignitor system for rocket engine, which substantially reduce complexity of circuits and eliminate difficulties associated with component matching.

B84-10020

STOWABLE SOLAR-CELL ARRAY

P. M. STELLA (CALTECH)

Jan. 1985

NPO-15893**Vol. 8, No. 3, P. 325**

Solar electric power source easily storable and transportable. Source employs blanket of photovoltaic cells rolled up when not in use. The hollow core of canister reel used as storage space for radio equipment or first aid supplies, etc.

B84-10021**BURNWIRE SIMULATOR**

G. L. BUMMER (CALTECH)

Jan. 1985

NPO-15883**Vol. 8, No. 3, P. 325**

Fuse-containing device simulates pyrotechnic firing circuitry. Simulator includes housing receptacle connector at one end, and fuse at opposite end. Fuse circuit useful in any system having complex built-in wiring for current pulse applications.

B84-10022**A SENSITIVE INFRARED PHOTODETECTOR**

S. K. SRIVASTAVA (CALTECH) and L. MALEKI (CALTECH)

Jan. 1985

NPO-15926**Vol. 8, No. 3, P. 325**

Technique utilizing photodetachment of negative ions incorporated into sensitive photodetector which allows detection of low-energy infrared photons, without resorting to cryogenic cooling.

B84-10023**PRECISE CONTROL OF A TUNABLE IR DIODE LASER**

R. T. MENZIES (CALTECH) and C. W. RUTLEDGE (CALTECH)

Jan. 1985

NPO-16000**Vol. 8, No. 3, P. 326**

Tuning system applicable to lead-salt semiconductor tunable diode laser (TDL) and other solid-state lasers with temperature and current dependent emission wavelength developed for balloon borne, high-resolution spectrometer that measures trace atmospheric constituents in stratosphere. Instrument measures absorption at approximately 20 points in 100 MHz wide spectral line.

B84-10024**TUBE-WALL THICKNESS DETECTOR**

R. E. KLEINT (Rockwell International Corp.) and R. D. BAILY (Rockwell International Corp.)

Jan. 1985

MFS-19741**Vol. 8, No. 3, P. 326**

Eddy-current measurements detect wear of thin walls (0.01 in) (0.25 mm) in small diameter (0.19 in) (5 mm) heat exchanger tubing. Flexible durable thin rod inserts eddy-current coil into the heat exchanger tube.

B84-10025**TWIST-FREE WIRE STRANDING**

R. W. HINES (Honeywell, Inc.)

Jan. 1985

MFS-25914**Vol. 8, No. 3, P. 326**

Device for wire-stranding operations provides uniform tension and twist-free conditions for 30 gage or smaller high strand density flexible cable assemblies.

B84-10225**HIGH-FREQUENCY, HIGH-POWER CAPACITOR**

C. W. WHITE (Maxwell Laboratories, Inc.) and P. S. HOFFMAN (Maxwell Laboratories, Inc.)

Apr. 1985 See Also NASA CR-168035(N83-27127/NSP)

LEW-14034**Vol. 8, No. 4, P. 445**

Capacitor increases efficiency of high-frequency circuits. High-power-capacitor design uses split foil and floating foil plus multiple coils to reduce voltage drop across film and increases lifetime (10 years). Capacitor reliably operates at high frequency in environments normally not hospitable to electronic components.

B84-10226**STABLE OPTOCOUPLER**

D. J. GRIFFIN (Perkin-Elmer Corporation)

Apr. 1985

MFS-25927**Vol. 8, No. 4, P. 446**

Circuit stabilizes current-transfer ratio (CTR) of optically coupled isolator used as linear transducer. New circuit employs feedback circuit containing second optocoupler. Circuit is inexpensive, requires little additional hardware.

B84-10227**REVERSING OPTICAL DAMAGE IN LINBO3 SWITCHES**

C. M. GEE (Hughes Aircraft Co.) and G. D. THURMOND (Hughes Aircraft Co.)

Apr. 1985

NPO-16239**Vol. 8, No. 4, P. 447**

One symptom of optical damage in Ti-diffused LiNbO3 directional-coupler switch reversed by temporarily raising input illumination to higher-than-normal power level. Healing phenomenon used to restore normal operation, increase operating-power rating, and stabilize operating characteristics at lower powers. Higher operating power is tolerated after treatment.

B84-10228**REAL-TIME REED-SOLOMON DECODER**

C. R. LAHMEYER (CALTECH)

Apr. 1985

NPO-15982**Vol. 8, No. 4, P. 448**

RS decoder uses dedicated hardware and data pipelining for high-speed operation. Parallel processing techniques provide equivalent of over one billion operations per second at one step in decoding. Decoder finds commercial application in data encoding/decoding, telemetry, and radio communications.

B84-10229**ADVANCED DC-TRACTION-MOTOR CONTROL SYSTEM**

O. VITTONI (Centro Ricerche Fiat S.p.A.)

Apr. 1985

NPO-16118**Vol. 8, No. 4, P. 449**

Motor-control concept for battery-powered vehicles includes state-of-the-art power-transistor switching and separate excitation of motor windings in traction and regenerative braking. Switching transistors and other components of power-conditioning subsystem operate under control of computer that coordinates traction, braking, and protective functions.

B84-10230**INTEGRATED LASER AND LIGHT DETECTOR**

J. KATZ (CALTECH), J. R. LESH (CALTECH), and R. M. DICKINSON (CALTECH)

Apr. 1985

NPO-15943**Vol. 8, No. 4, P. 450**

Proposed infrared optical transmitter tracks distant beacon and automatically point transmitted beam toward beacon. Essential transmitter is integrated gallium arsenide device containing electronically-steerable semiconductor injection laser and position detector that senses direction to beacon. With satisfactory optics and sufficient power, system used for long-distance transmission.

B84-10231**DIFFERENTIAL-COIL EDDY-CURRENT MATERIAL SORTER**

J. NUMMELIN (Rockwell International Corp.) and D. BUCKLEY (Rockwell International Corp.)

Apr. 1985

MFS-19872**Vol. 8, No. 4, P. 451**

Small metal or other electrically conductive parts of same shape but different composition quickly sorted with differential-coil eddy-current sorter. Developed to distinguish between turbine blades of different alloys, hardnesses, and residual stress, sorter generally applicable to parts of simple and complex shape.

01 ELECTRONIC COMPONENTS AND CIRCUITS

B84-10232

HIGH-CYCLE-LIFE LITHIUM CELL

S. P. S. YEN (CALTECH), B. CARTER (CALTECH), D. SHEN (CALTECH), and R. SOMOANO (CALTECH)

Apr. 1985

NPO-15921

Vol. 8, No. 4, P. 451

Lithium-anode electrochemical cell offers increased number of charge/discharge cycles. Cell uses components selected for compatibility with electrolyte solvent. These materials are wettable and chemically stable. Low vapor pressure and high electrochemical stability of solvent improve cell packaging, handling, and safety. Cell operates at modest temperatures less than 100 degrees C - and is well suited to automotive, communications, and other applications.

B84-10233

DISCRIMINATOR AIDS PHASE-LOCK ACQUISITION

L. M. CARSON (Motorola, Inc.) and F. E. KRASIN (Motorola, Inc.)

Apr. 1985

NPO-14311

Vol. 8, No. 4, P. 453

Voltage-controlled oscillator in suppressed-carrier detector acquire carrier frequency and phase quickly with help of frequency-discriminator arrangement. To obtain discriminator function, filter bandwidth in quadrature (Q) leg of detector is widened with respect to bandwidth of filter in inphase (I) leg.

B84-10234

LIGHT-ACTIVATED MICROWAVE DEVICE

J. MASERJIAN (CALTECH)

Apr. 1985

NPO-16112

Vol. 8, No. 4, P. 453

Laser-activated microwave semiconductor device switches at microwave speeds, generates pulses, or detects optical pulses with fast response. Device consists essentially of back-to-back metal/thin oxide/silicon (MTOS) capacitors on silicon chip.

B84-10235

MAGIC-T-COUPLED MAGNETRONS

R. M. DICKINSON (CALTECH)

Apr. 1985

NPO-15061

Vol. 8, No. 4, P. 454

Outputs of two magnetrons added coherently in scheme based on resonant waveguide coupling and injection phase locking. In addition, filaments are turned off after starting. Overall effect is relatively-inexpensive, lowpower, noisy magnetrons generate clean carrier signals of higher power that ordinarily require more expensive klystrons.

B84-10236

LIGHTWEIGHT REGULATED POWER SUPPLY

C. W. MCLYMAN (CALTECH)

Apr. 1985

NPO-15977

Vol. 8, No. 4, P. 455

Power-supply circuit regulates output voltage by adjusting frequency of chopper circuit according to variations. Currently installed in battery charger for electric wheelchair, circuit is well suited to other uses in which light weight is important - for example, in portable computers, radios, and test instruments.

B84-10237

ANTENNA SUBREFLECTOR FED BY A LINE SOURCE

A. C. BROWN JR. (Goodyear Aerospace Corp.) and G. D. BRUNNER (Goodyear Aerospace Corp.)

Apr. 1985

MSC-20626

Vol. 8, No. 4, P. 456

Additional antenna design options made available by subreflector concept for converting cylindrical waves into spherical waves. Waves used to feed main reflector that shapes radiation pattern into pencil beam for point-to-point communication or into fan beam for aircraft tracking, space surveillance, or directional beacon transmission.

B84-10238

ELLIPSOIDAL BALLOON ANTENNA

P. W. CRAMER (CALTECH)

Apr. 1985

NPO-15931

Vol. 8, No. 4, P. 457

Direct-broadcast ellipsoidal antenna 40 percent smaller than spherical reflector. Balloon antenna has feedpoint on surface of ellipsoid outside balloon, simplifying balloon deployment and feed support. Dielectric shrouds used locally to adjust shape of balloon and maintain feed distance at its optimum value.

B84-10239

EFFICIENT REFLECTOR ANTENNA

D. A. BATHKER (CALTECH), A. G. CHA (CALTECH), V. GALINDO (CALTECH), and H. F. REILLY (CALTECH)

Apr. 1985

NPO-16262

Vol. 8, No. 4, P. 458

Efficient antenna applicable to systems where main reflector diameter is at least 500 wavelengths. Design provides 2-to-3-dB improvement in gain divided by noise temperature (G/T) over centerline symmetric designs. Performance improvement largely due to clear-aperture, off-axis dual-reflector design.

B84-10240

MEASURING THE CONTACT RESISTANCES OF PHOTO-VOLTAIC CELLS

D. R. BURGER (CALTECH)

Apr. 1985

NPO-16168

Vol. 8, No. 4, P. 459

Simple method devised to measure contact resistances of photovoltaic solar cells. Method uses readily available equipment and applicable at any time during life of cell. Enables evaluation of cell contact resistance, contact-end resistance, contact resistivity, sheet resistivity, and sheet resistivity under contact.

B84-10241

ESTIMATION OF GROUNDING-STRAP RESISTANCES

R. Q. JACKSON (Rockwell International Corp.)

Apr. 1985

MSC-20694

Vol. 8, No. 4, P. 460

Two formulas and set of tabulated values used for calculations of resistances of electrical grounding straps. Tabulated values take into account resistances of terminal crimps as well as resistance of straps alone. Equations apply to thin metal strips, woven braids, and stranded jumpers.

B84-10242

MEASURING AIR-IONIZER OUTPUT

J. O. LONBORG (CALTECH)

Apr. 1985

NPO-16058

Vol. 8, No. 4, P. 461

Test apparatus checks ion content of airstream from commercial air ionizer. Apparatus ensures ion output is sufficient to neutralize static charges in electronic assembly areas and concentrations of positive and negative ions are balanced.

B84-10243

GUARD FOR FUSE CAPS

D. C. ATWELL (McDonnell Douglas Corp.)

Apr. 1985

KSC-11283

Vol. 8, No. 4, P. 461

L-shaped guard attached to fuse holder. Guard prevents casual tampering with fuses in electrical junction box or fuse block. Protects fuses from being damaged by handling or by rope or string used to secure them. With fuse-cap guard, only responsible people have access to fuses.

B84-10244

BATTERIES FOR ELECTRIC VEHICLES

R. A. CONOVER (CALTECH)

Apr. 1985

NPO-15142 Vol. 8, No. 4, P. 462

Report summarizes results of test on 'near-term' electrochemical batteries - (batteries approaching commercial production). Nickel/iron, nickel/zinc, and advanced lead/acid batteries included in tests and compared with conventional lead/acid batteries. Batteries operated in electric vehicles at constant speed and repetitive schedule of accelerating, coasting, and braking.

B84-10245 THEORETICAL INVESTIGATION OF DIELECTRIC HORN ANTENNAS

J. K. RAINES (Raines Engineering)
Apr. 1985

GSC-12876 Vol. 8, No. 4, P. 462

Mathematical model applicable to both solid and hollow dielectric horn antennas implemented in computer program. Conventional hollow metal horns have several disadvantages: difficult to fabricate at short wavelengths and conducting properties of metal tend to deteriorate with increasing frequency. Dielectric horns offer advantages over conventional metal horns. Computer program permits user to investigate potential of various dielectric antenna designs.

B84-10246 REDUCING STEPPING-MOTOR POWER CONSUMPTION

C. J. WILLIAMS (The Perkin Elmer Corporation)

Apr. 1985

MFS-25119 Vol. 8, No. 4, P. 463

Direct-current stepping motors used in computer peripherals, process control, and precision remote-positioning equipment constantly dissipate power and create heat even when not moving. Circuit design energizes stepper motor only when pulses are present on control input.

B84-10247 DETECTING THE POLARITY OF LIGHTNING STRIKES

R. L. GRUMM (CALTECH)

Apr. 1985

NPO-16063 Vol. 8, No. 4, P. 463

Recording technique using audio tape recorder determines polarity of lightning discharges. Information important in design of lightning-protection equipment for powerlines and other exposed systems.

B84-10248 CALCULATING STRAIN RELIEF IN ELECTRONIC-COMPONENT LEADS

H. SNYTSHEUVEL (TRW, Inc.)

Apr. 1985

MSC-20416 Vol. 8, No. 4, P. 463

Stress/strain formulas applicable to design of electronic-component leads compiled in report. Such things as factors of safety and whether or not lead is likely to fail in service determined in advance. Set of formulas is simple enough to be solved on programable hand-held calculator.

B84-10249 TEMPERATURE COMPENSATION FOR A FREQUENCY-MODULATED OSCILLATOR

R. H. HESSE (TRW, Inc.)

Apr. 1985

MSC-20556 Vol. 8, No. 4, P. 463

Carrier frequency and deviation ratio of frequency-modulated oscillator maintained nearly constant by temperature-compensating circuit.

B84-10250 SOLID-STATE LATCHING RELAY

C. W. MCCLYMAN (CALTECH)

Apr. 1985

NPO-15028 Vol. 8, No. 4, P. 464

Latching relay requiring only single coil activated by trigger pulse and remains latched for timed interval during which it is immune to additional trigger pulses and noise.

B84-10251 PULSED-CURRENT TRANSDUCERS

S. S. NAGANO (CALTECH)

Apr. 1985

NPO-14048 Vol. 8, No. 4, P. 464

Diode circuit linearizes output of pulsating dc transducers. Circuit consists of diode in series with sensing resistor placed across secondary winding of transducer transformer.

B84-10252 PLATINUM-RESISTOR DIFFERENTIAL TEMPERATURE SENSOR

R. B. KOLBLY (CALTECH) and M. J. BRITCLIFFE (CALTECH)

Apr. 1985

NPO-15666 Vol. 8, No. 4, P. 464

Platinum resistance elements used in bridge circuit for measuring temperature difference between two flowing liquids. Temperature errors with circuit are less than 0.01 degrees C over range of 100 degrees C.

B84-10253 DETERMINING THE LIFE EXPECTANCY OF PHOTOVOLTAIC SYSTEMS

A. R. HOFFMAN (CALTECH), J. S. GRIFFITH (CALTECH), and P. JAFFE (CALTECH)

Apr. 1985

NPO-15683 Vol. 8, No. 4, P. 464

Several tests used to determine adequacy of photovoltaic systems, their modules, and materials to survive in real environments. Tests include outdoor testing of systems, real-time and accelerated outdoor testing of modules and materials, and laboratory testing of modules and materials.

B84-10254 IMPROVED OPTICAL KEYBOARD

R. S. JAMIESON (CALTECH)

Apr. 1985

NPO-15132 Vol. 8, No. 4, P. 464

Optical keyboard surfaces used in typewriters, computer terminals, and telephone inexpensively fabricated using stack of printed-circuit cards set in laminate. Internal laminations carry all illuminating and sensing light conductors to keys.

B84-10255 HALL-EFFECT GROUND-FAULT INTERRUPTOR

L. OKIN (Underwriters Laboratories, Inc.)

Apr. 1985

NPO-15915 Vol. 8, No. 4, P. 464

Tested ground-fault interruption circuit utilizing Hall-effect device to sense differential current in magnetic core tips and opens circuit.

02 ELECTRONIC SYSTEMS

B84-10026 FAST DUAL ANALOG-TO-DIGITAL CONVERTER

D. E. WALLIS (CALTECH) and R. R. GREEN (CALTECH)

Jan. 1985

NPO-15006 Vol. 8, No. 3, P. 329

Unit delivers blocks of quadrature data to computer memory. Contains 105 integrated circuit packages in 19 by 3 1/2 inch (48.26 by 8.39 cm) rack mounted drawer with internal force air blower. Intended for synchronous sampling of quadrature pairs of data, samples with minimal skew (about 10 nanoseconds) using video-type high-speed sampling technology. Unit equipped for computer controlled

02 ELECTRONIC SYSTEMS

self-testing. Originally developed for planetary radar data-acquisition system.

B84-10027 WIRE-IDENTIFICATION INSTRUMENT

J. O. LONBORG (CALTECH)

Jan. 1985

NPO-15633

Vol. 8, No. 3, P. 330

Instrument automatically tests each wire in multiwire cable and identifies specified wire to be segregated or labeled and locates wire connected to specified connector pin. Instrument made with readily available CMOS integrated circuits. More efficient and reliable than conventional continuity testers and less expensive than computer controlled units.

B84-10028 AUTOMATIC MONITORING OF SWITCHING POWER SUPPLIES

R. L. MOSER (Martin Marietta Corp.)

Jan. 1985

MFS-25968

Vol. 8, No. 3, P. 351

Fast analysis of switching waveforms allows detection of impending failures. Switching power conditioner converts dc power from source such as battery or solar cell array to well regulated dc at convenient voltages and currents. Concept originally developed for space stations and spacecraft also suitable for power conditioning equipment in aircraft and in terrestrial photovoltaic power systems.

B84-10029 INTERCOMPUTER COMMUNICATION LINK

W. A. LUSHBAUGH (CALTECH) and J. W. LAYLAND (CALTECH)

Jan. 1985

NPO-13446

Vol. 8, No. 3, P. 331

Interface units transmit, receive, and perform 'handshaking' functions. Two computers communicate over distance up to 6700 meters at average transmission speeds around 200 kilobaud with help of pair of programable interface units. Interfaces use form of pulse modulation and are programed for full 'handshaking' capabilities.

B84-10030 OPTICAL QUANTUM RECEIVER FOR BINARY SIGNALS

V. A. VILNROTTER (CALTECH)

Jan. 1985

NPO-15122

Vol. 8, No. 3, P. 332

In quantum optical receiver, both amplitude and phase of received optical signal measured to extract as much information as possible, thereby reducing error probability. Phase-modulated received signal mixed with equal amplitude replica of optical carrier generated in phase locked loop. Two signals interfere with each other at photomultiplier cathode. Probability of error with this scheme close to theoretical minimum and implemented with current technology.

B84-10031 MONITORING PERFORMANCE OF COMPLEX SYSTEMS

W. F. THOMAS

Jan. 1985

KSC-11273

Vol. 8, No. 3, P. 333

33-page report describes use of computers in automatic on-line monitoring of Centaur rocket prior to launch. Computers analyze measurements and verify events and commands. System uses adaptive software so only real problems are detected and brought to attention of engineers. Software techniques transferable to such industrial uses as batch process control and production line automation.

B84-10032 REPORT ON SATELLITE RADAR FOR DETECTING OCEAN CURRENTS

A. JAIN (CALTECH)

Jan. 1985

NPO-15704

Vol. 8, No. 3, P. 333

Good resolution and high signal/noise ratio anticipated. Report describes orbiting sidelooking radar that measures ocean currents in direction toward or away from it. Radar relies on relationship between Doppler shifts and lengths and frequencies of ocean waves.

B84-10033

COST AND PERFORMANCE OF DISTRIBUTED PHOTOVOLTAIC SYSTEMS

C. S. BORDEN (CALTECH) and M. C. DAVISSON (CALTECH)

Jan. 1985

NPO-16001

Vol. 8, No. 3, P. 334

Lifetime Cost and Performance (LCP) model assists in design of Photovoltaic (PV) systems. LCP simulation of performance, cost and revenue streams associated with distributed PV power systems. Provides user with substantial flexibility in specifying technical and economic environment of PV application.

B84-10034

ELECTRIC/HYBRID VEHICLE SIMULATION

R. A. SLUSSER (CALTECH), C. P. CHAPMAN (CALTECH), and J. P. BRENNAND (General Research Corp.)

Jan. 1985

NPO-15229

Vol. 8, No. 3, P. 334

ELVEC computer program provides vehicle designer with simulation tool for detailed studies of electric and hybrid vehicle performance and cost. ELVEC simulates performance of user-specified electric or hybrid vehicle under user specified driving schedule profile or operating schedule. ELVEC performs vehicle design and life cycle cost analysis.

B84-10035

LRU VOLTAGE ANALYSIS

T. OEPOMO (Rockwell International Corp.) and T. PROUTY (Rockwell International Corp.)

Jan. 1985

MSC-20699

Vol. 8, No. 3, P. 335

Program for analyzing line replacement unit (LRU) voltages in shuttle orbiter predicts minimum voltage level of main power distribution bus needed to meet predetermined LRU voltage. Loads constant-power or resistive. In some cases fed from two or three sources through diodes.

B84-10036

FRONT-END PROGRAM FOR SYSGEN

C. R. CARLSON (CALTECH) and M. DAVISSON (CALTECH)

Jan. 1985

NPO-15782

Vol. 8, No. 3, P. 335

SYSGEN, Power Generation System Production costing and Reliability Analysis program, simulates production costs and reliability of electric utility with and without time-dependent generating units. FEPS transforms inputs into proper formats, builds data files and adds Job Control Language necessary to running SYSGEN program.

B84-10037

MULTIPLE-USER ADAPTIVE-ARRAY COMMUNICATION SYSTEM

S. ZOHAR (CALTECH)

Jan. 1985

NPO-15765

Vol. 8, No. 3, P. 335

Weights for K-beam system computed K/6 times faster. In single-frequency adaptive-array communication system in which K mobile users communicate with central station equipped with n-antenna array. Each K signal recoverable by taking specific weighted sum of n complex antenna voltages.

B84-10038

CAPACITOR-TEST SYSTEM

F. M. OTT (CALTECH) and R. A. SUMMERS (CALTECH)

Jan. 1985

NPO-16485

Vol. 8, No. 3, P. 336

Polycarbonate film capacitors tested for leakage paths with microprocessor controlled multiplexer test sequence. Microprocessor based capacitor test system simultaneously monitors 80 capacitors.

**B84-10039
IMPROVED ULTRASONIC RESOLUTION VIA ANALOG TECHNIQUE**

P. M. GAMMELL (CALTECH)

Jan. 1985

NPO-15707

Vol. 8, No. 3, P. 336

High spatial resolution obtained from reflected or transmitted ultrasonic pulses by analog technique that produces signal proportional to magnitude of complex plane analytic representation of signal.

**B84-10040
REMOVING DRIFT FROM FREQUENCY-STABILITY MEASUREMENTS**

C. A. GREENHALL

Jan. 1985

NPO-15833

Vol. 8, No. 3, P. 336

Method for eliminating frequency drifts from frequency stability measurements produces more accurate indication of stability of such frequency standard as hydrogen maser.

**B84-10041
REMOTE-IMAGING PARAMETERS**

R. F. RICE (CALTECH)

Jan. 1985

NPO-14869

Vol. 8, No. 3, P. 336

Image resolution, image quality and data transmission rate of remote imaging systems continuously controlled by operator intervention. Set of levers allows operator to control independently frame rate, frame size and image quality in bits per pixel. System used for imaging systems in aircraft or remotely piloted vehicles.

**B84-10042
PROGRAMMABLE MULTICRATE CONTROLLER**

G. L. MOOK (McDonnell Douglas Corp.) and M. R. PHILLIPS (McDonnell Douglas Corp.)

Jan. 1985

MFS-25533

Vol. 8, No. 3, P. 336

High-speed, environmentally hardened controller developed for use with commercially available system crates for both experiment control and data handling. Programmable crate controller consists of three functional areas: control section utilizes high-speed bit-slice circuitry, memory, and data way interface.

**B84-10043
EYE-MOVEMENT TRACKER WOULD REDUCE VIDEO BANDWIDTH**

C. F. RUOFF (CALTECH)

Jan. 1985

NPO-15432

Vol. 8, No. 3, P. 337

Bandwidth required to transmit closed circuit television image reduced by transmitting small portion at high resolution and remainder at low resolution. High-resolution portion centered in viewer's gaze so entire image seems to be of high resolution.

**B84-10044
ELIMINATING FALSE SIGNALS FROM ELECTROMECHANICAL KEYBOARDS**

C. F. SCHOTT (Rockwell International Corp.)

Jan. 1985

MSC-20429

Vol. 8, No. 3, P. 337

Contact switches in electromechanical keyboards prone to 'bounce' creation of unwanted pulses that interfere with digital systems. New adapter unit eliminates bounce without separate power supply.

**B84-10045
LOW-FREQUENCY NAVIGATIONAL SYSTEM**

D. E. WALLIS (CALTECH)

Jan. 1985

NPO-15264

Vol. 8, No. 3, P. 337

Accurate vehicle position determination over 50 by 50-km service area accomplished by low-frequency-radio navigational system comprised of four frequency/phase comparison transmitters and receivers. Use of grid-calibration table permits accurate position determination in vehicle receiver system.

**B84-10046
TRANSFER-FUNCTION SIMULATOR**

M. J. KAVAYA (CALTECH)

Jan. 1985

NPO-15696

Vol. 8, No. 3, P. 337

Transfer function simulator constructed from analog or both analog and digital components substitute for device that has faults that confound analysis of feedback control loop. Simulator is substitute for laser and spectrophone.

**B84-10047
OPTICAL MASS MEMORY SYSTEM SPECIFICATION**

Innovator Not Given (Harris Corp.)

Jan. 1985

MFS-25592

Vol. 8, No. 3, P. 337

Specifications given for computer controlled optical mass memory system that stores and retrieves data from silver halide films 148-mm square and 7 mils (0.18mm) thick at user bit density of 30 Mbit/in. 2 (4.7 Mbit/cm²) with uncorrectable bit-error rate of 10 to negative 9th power or less. Allows for expansion to 10 the 15th power bit capacity.

**B84-10048
REED-SOLOMON ENCODER**

T. K. TROUNG (CALTECH), I. S. REED (CALTECH), L. J. DEUTSCH (CALTECH), I. S. HSU (CALTECH), K. WANG (CALTECH), and C. S. YEH (CALTECH)

Jan. 1985

NPO-16074

Vol. 8, No. 3, P. 337

Report presents mathematical principles of Berlekamp bit serial multiplier algorithm and its application to design of very-large-scale integrated (VLSI) encoders for Reed-Solomon error-correcting codes. Structure made readily on single chip of negatively doped channel metal oxide semiconductor.

**B84-10049
NORMALIZING VFO FREQUENCY BY NON-POWER-OF-2 DIVISION**

C. R. ANDERSON (Odetics, Inc.)

Jan. 1985

NPO-15330

Vol. 8, No. 3, P. 338

PLL oscillator with VFO operating at one frequency yields any one of four frequencies by dividing by 4, 7, 21, or 52.5. Radiation resistant phase-locked loop oscillator generates output frequency 32 times any 1 or 4 specific input reference frequencies constructed without increasing component count over that of conventional circuit.

**B84-10256
DIRECT-PHOTON-DETECTION COMMUNICATIONS**

J. R. LESH (CALTECH) and J. KATZ (CALTECH)

Apr. 1985

NPO-15905

Vol. 8, No. 4, P. 467

Optical communications system based on direct detection of photons rather than heterodyning of carrier with local oscillator. Direct-detection system uses single laser source, pulse-position modulation, and Reed-Solomon coding to protect against burst errors. Conventional photomultiplier tube is receiver. Technology applicable to terrestrial communications.

**B84-10257
ESTIMATES OF SMALL SIGNAL/NOISE RATIOS**

L. D. HOWARD (CALTECH)

Apr. 1985

NPO-15653

Vol. 8, No. 4, P. 468

02 ELECTRONIC SYSTEMS

Signal/Noise Ratio Meter measures ratio of signal power to noise power in input that contains both signal and noise. Signal and noise first filtered and normalized in analog circuitry, then digitized and sampled. Performance of SNR meter determined by statistical algorithm chosen for analysis of samples.

B84-10258

PROXIMITY INDICATOR FOR REMOTE MANIPULATOR
A. K. BEJCZY (CALTECH)

Apr. 1985

NPO-15064

Vol. 8, No. 4, P. 468

Display indicates pitch, yaw, and distance of remote manipulator with respect to object to be grasped. Displays numerical values and bargraph simulation of position and orientation of hand. When errors in position and orientation are small enough to ensure successful grasp, unit alerts operator with audible and visible signals.

B84-10259

CONTROLLING SOLAR-POWER SYSTEMS WITH DISTRIBUTED PROCESSORS

M. S. IMAMURA (Martin Marietta Corp.) and R. L. MOSER (Martin Marietta Corp.)

Apr. 1985

NPO-15101

Vol. 8, No. 4, P. 469

System undergoing development uses distributed microprocessors to monitor and control photovoltaic power system. Equipment increases life expectancy and reliability of power system and decreases costs. Adapted to vehicular, residential, and commercial solar and nonsolar power systems. Equipment especially desirable in systems with overall power levels above few kilowatts.

B84-10260

MEASURING TRACKING ACCURACY OF CCD IMAGERS
R. H. STANTON (CALTECH) and E. W. DENNISON (CALTECH)

Apr. 1985

NPO-15665

Vol. 8, No. 4, P. 470

Tracking accuracy and resolution of charge-coupled device (CCD) imaging arrays measured by instrument originally developed for measuring performance of star-tracking telescope. Operates by projecting one or more artificial star images on surface of CCD array, moving stars in controlled patterns, and comparing star locations computed from CCD outputs with those calculated from step coordinates of micropositioner.

B84-10261

PRIORITY QUEUING ON A PARALLEL DATA BUS
D. E. WALLIS (CALTECH)

Apr. 1985

NPO-15005

Vol. 8, No. 4, P. 471

Queuing strategy for communications along shared data bus minimizes number of data lines while always assuring user of highest priority given access to bus. New system handles up to 32 user demands on 17 data lines that previously serviced only 17 demands.

B84-10262

TARGET SIMULATOR FOR SYNTHETIC-APERTURE RADARS

H. A. ZEBKER (CALTECH), D. N. HELD (CALTECH), R. M. GOLDSTEIN (CALTECH), and T. C. BICKLER (CALTECH)

Apr. 1985

NPO-15024

Vol. 8, No. 4, P. 471

In proposed Target Simulator for Testing Synthetic-Aperture Radars, radar transmitter output received, mixed down to video frequencies, and passed through variable digital delay. Delayed signal mixed up to original carrier frequency and transmitted back to radar. Synthetic-aperture radar (SAR) generates return signal that contains range-curvature information in addition to Doppler-frequency information.

B84-10263

SYNCHRONIZED RADAR-TARGET SIMULATOR

B. C. CHIN (Hughes Aircraft Co.)

Apr. 1985

MSC-20240

Vol. 8, No. 4, P. 472

Apparatus for testing radar system generates signals that simulate amplitude and phase characteristics of target returns and their variation with antenna-pointing direction. Antenna movement causes equipment to alter test signal in imitation of behavior of real signal received during tracking.

B84-10264

ESTIMATING DOPPLER SHIFTS FOR SYNTHETIC-APERTURE RADAR

J. C. CURLANDER (CALTECH)

Apr. 1985

NPO-15990

Vol. 8, No. 4, P. 473

Quality of synthetic-aperture-radar (SAR) imagery enhanced by pair of signal-processing techniques that compensate for relative motion between target and vehicle. Combining vehicle trajectory data with radar-parameter and raw image data, techniques generate Doppler estimates for use in constructing fully processed images.

B84-10265

CONTOUR-MAPPING SYNTHETIC-APERTURE RADAR

R. M. GOLDSTEIN (CALTECH), E. R. CARO (CALTECH), and C. WU (CALTECH)

Apr. 1985

NPO-15939

Vol. 8, No. 4, P. 474

Airborne two-antenna synthetic-aperture-radar (SAR) interferometric system provides data processed to yield terrain elevation as well as reflected intensity information. Relative altitudes of terrain points measured to within error of approximately 25 m.

B84-10266

FIBER-OPTIC EQUIPMENT FOR POWER-SYSTEM CONTROL

A. O. BRIDGEFORTH (CALTECH) and L. C. YANG (CALTECH)

Apr. 1985

NPO-15968

Vol. 8, No. 4, P. 476

Report surveys state of art in fiber optics and explores use of microprocessors communicating over optical fibers to control complicated power system with many producing and consuming units. Power system of study is of planetary spacecraft, and fiber-optic technology extension of that now under development or used in military aircraft and ships.

B84-10267

CONVOLUTIONALLY-CODED UNBALANCED QPSK SYSTEMS

D. DIVSALAR (CALTECH) and J. H. YUEN (CALTECH)

Apr. 1985

NPO-15566

Vol. 8, No. 4, P. 476

Report discusses error-rate performance for three convolutionally coded unbalanced quadrature-phase-shift-keying (UQPSK) communication systems with noisy carriers that introduce crosstalk. Systems analyzed unbalanced in sense that each transmits two data streams with different bit rates and (in some cases) different powers.

B84-10268

INTERACTIVE DIGITAL SIGNAL PROCESSOR

W. H. MISH

Apr. 1985

GSC-12862

Vol. 8, No. 4, P. 477

Interactive Digital Signal Processor, IDSP, consists of set of time series analysis 'operators' based on various algorithms commonly used for digital signal analysis. Processing of digital signal time series to extract information usually achieved by applications of number of fairly standard operations. IDSP excellent teaching tool for demonstrating application for time series operators to artificially generated signals.

B84-10269
SHORT-RANGE DIGITAL OPTICAL LINKS
 R. M. DICKINSON (CALTECH)

Apr. 1985
NPO-15999

Vol. 8, No. 4, P. 477

Concept based on multiple optoelectronic chips. Proposed network of semiconductor lasers used for communication and radar. Network includes small integrated transmitters, receivers, and data processors placed at strategic points on station and vehicles.

B84-10270
COMMUNICATION PROGRAM EMULATES SWITCH-BOARD

D. RON (Rockwell International Corp.)
 Apr. 1985

MFS-19917

Vol. 8, No. 4, P. 477

Software allows microprocessor systems to communicate with external devices. Flexible program completely menu-driven, and all local operator commands require only single keystroke.

B84-10271
DIGITAL RATIOMETER
 R. BEER

Apr. 1985

NPO-15396

Vol. 8, No. 4, P. 477

Small, low-cost comparator with 24-bit-precision yields ratio signal from pair of analog or digital input signals. Arithmetic logic chips (bit-slice) sample two 24-bit analog-to-digital converters approximately once every millisecond and accumulate them in two 24-bit registers. Approach readily modified to arbitrary precision.

B84-10272
BISTATIC SYNTHETIC-APERTURE RADAR

C. ELACHI (CALTECH), R. GOLDSTEIN (CALTECH), and D. HELD (CALTECH)

Apr. 1985

NPO-15619

Vol. 8, No. 4, P. 478

Report describes synthetic-aperture radar that uses spaceborne transmitter and ground (or airborne) receiver to obtain imaging data in real time. System has applications in vessel navigation in open seas and polar ice regions, monitoring of wave and ice patterns near shores and oil platforms, and continuous monitoring of region with repeat time of few hours or less.

B84-10273
IMAGING SYSTEM FOR HIGH-TEMPERATURE PROCESSES

T. A. GLAVICH (CALTECH)

Apr. 1985

NPO-15945

Vol. 8, No. 4, P. 478

Borescope/camera arrangement used for viewing silhouette image of specimen levitated inside furnace. System adapted for monitoring other processes in enclosures.

B84-10274
QUICKER SELECTION OF CCD IMAGES

P. M. SALOMON (CALTECH) and K. SMILOWITZ (CALTECH)

Apr. 1985

NPO-15345

Vol. 8, No. 4, P. 478

Microprocessor limits analog-to-digital conversion to image areas of interest. Image region of interest selected in order of brightness by use of threshold detectors and their coordinates stored by microprocessor for tracking.

B84-10275
HIGH-RESOLUTION CHARGE-COUPLED-DEVICE CAMERA

M. C. CLARY (CALTECH), K. P. KLAASEN (CALTECH), L. M. SNYDER (CALTECH), and P. K. WANG (CALTECH)

Apr. 1985

NPO-15086

Vol. 8, No. 4, P. 478

800-by-800-element sensor and lens of 1.5-m focal length used in camera with 0.01-mrad resolution.

B84-10276

PACKET TELEMETRY AND PACKET TELECOMMAND
 A. J. HOOKE (CALTECH) and E. GREENBERG (CALTECH)

Apr. 1985

NPO-16301

Vol. 8, No. 4, P. 478

Two communication protocols for telemetry and telecommand reduce amount of required hardware and software and facilitate bidirectional information exchange.

03 PHYSICAL SCIENCES

B84-10050
INTERFEROMETER MEASURES BROADBAND SURFACE ACOUSTIC WAVES

R. O. CLAUS (Virginia Polytechnic Institute and State University) and T. TURNER (Virginia Polytechnic Institute and State University)

Jan. 1985

LAR-12966

Vol. 8, No. 3, P. 341

Dual differential interferometer uses two pairs of orthogonally polarized optical beams to measure amplitude and orientation of broadband ultrasonic surface acoustic waves. Instrument modular, and sensitivity limited only by optical detector used.

B84-10051
ACOUSTIC GAUSSIAN FAR-FIELD PATTERN

R. O. CLAUS (Virginia Polytechnic Institute and State University) and P. S. ZERWEKH (Virginia Polytechnic Institute and State University)

Jan. 1985

LAR-12967

Vol. 8, No. 3, P. 342

Gaussian profile achieved by using annular electrodes. Transducer constructed by depositing circularly symmetric metallic multielectrode array on 12.7 mm diameter X-cut quartz disk. Each electrode independently connected to impedance network optimized to produce Gaussian distribution with less than 2 percent error. Ultrasonic transducer produces far field beam with Gaussian spatial profile for materials evaluation applications.

B84-10052

RECEIVER FOR SOLAR AIR TURBINE

A. KOFAL (The Boeing Co.), R. SHANNON (The Boeing Co.), and D. K. ZIMMERMAN (The Boeing Co.)

Jan. 1985

NPO-15124

Vol. 8, No. 3, P. 343

Solar receiver heats air to temperature high enough to drive gas turbine. Receiver has thermal output of about 70 kilowatts. Pointing downward at focal position of solar reflector, proposed receiver accepts intense concentrated sunlight. Although temperatures in receiver may rise to 1,500 degrees F (816 degrees C) or more, calculations show receiver loses less than 10 percent of insolation by convection through aperture. Receiver designed for 30-year life without scheduled maintenance or replacement.

B84-10053
ANGLE-MEASUREMENT AND RANGING SYSTEM

J. C. TIETZ (Martin Marietta Corp.)

Jan. 1985

MFS-25912

Vol. 8, No. 3, P. 344

Optical system automatically supplies information on

03 PHYSICAL SCIENCES

angular position and range of object. Stereo rangefinder video signals from cameras processed to determine center of brightness for images of beacon on target vehicle. Range updated by onboard computer. Originally developed for spacecraft rendezvous and guidance, features of system adapted to angle-measurement and ranging problems on Earth. Technique also used for tool alignment inspections and color recognition.

B84-10054 ZERO-NET-CHARGE AIR IONIZER

W. R. WOODS JR. (CALTECH)

Jan. 1985

NPO-15937

Vol. 8, No. 3, P. 345

Instrument monitors air supplied by air ionizer and regulates ionizer to ensure net charge neutral. High-impedance electrometer and nulling control amplifier regulate output of air ionizer. Primarily intended to furnish ionized air having no net charge, instrument adaptable to generating air with positive or negative net charge is so desired. Useful where integrated circuit chips are manufactured, inspected, tested or assembled.

B84-10055 CONVECTIVE OSCILLATIONS AT CRYSTAL/MELT INTERFACE

M. GLICKSMAN (Rensselaer Polytechnic Institute), S. CORIELL (National Bureau of Standards), and R. BOISVERT (National Bureau of Standards)

Jan. 1985

MFS-25892

Vol. 8, No. 3, P. 345

Oscillatory instability in shape of solid/liquid interface geometry observed in heat-transfer experiments in long, thin vertical cylinder filled with succinonitrile. Novel fluid flow configuration with cylindrical symmetry developed to permit detailed heat flow experiments in geometry also mathematically tractable.

B84-10056 ASSESSING ENERGY-GENERATING SYSTEMS

R. G. CHAMBERLAIN (CALTECH), K. M. MCMASTER (CALTECH), and M. C. DAVISSON (CALTECH)

Jan. 1985

NPO-16159

Vol. 8, No. 3, P. 346

Economics of user specified thermal and electrical systems analyzed. OMEGA finds normative prices and break-even values of system parameters. Applies to electrical and thermal energy generation systems owned by utility, business or consumer.

B84-10057 A GENERAL OPTICAL SYSTEMS EVALUATION PROGRAM

M. WILSON and B. HOWELL

Jan. 1985

GSC-12823

Vol. 8, No. 3, P. 346

General Optical Systems Evaluation Program, GENOPTICS, aids analysis and evaluation of optical systems that employ lenses, mirrors, diffraction gratings and other geometrical surfaces. GENOPTICS uses geometrical ray tracing based on Snell's law.

B84-10058 SOLAR/THERMAL POWERPLANT SIMULATION

J. M. BOWYER (CALTECH), N. EL GABALAWI (CALTECH), G. M. HILL (CALTECH), and M. L. SLONSKI (CALTECH)

Jan. 1985

NPO-15440

Vol. 8, No. 3, P. 347

Simulation program evaluates performances and energy costs of diverse solar/thermal powerplant configurations. Approach based on optimizing sizes of collector and storage subsystems to give minimum energy cost for specified plant rating and load factor. Methodology provides for consistent comparative evaluation of solar/thermal powerplants.

B84-10059 THERMOELECTRIC GENERATOR

T. COLE (CALTECH)

Jan. 1985

NPO-16164

Vol. 8, No. 3, P. 347

Small modular alkali metal thermoelectric generator with no moving parts directly converts heat to electrical energy with efficiency of 20 to 40 percent. Unit uses closed regenerative electrochemical concentration cell based on sodium-ion conductor beta alumina.

B84-10060 SOFT-X-RAY PREFILTER FOR HOT, BRIGHT OBJECTS

J. M. DAVIS (American Science & Engineering, Inc.) and J. A. ORTENDAHL (American Science & Engineering, Inc.)

Jan. 1985

NPO-15972

Vol. 8, No. 3, P. 347

Prefilters consisting of beryllium foil supported on conductive silver mesh transmit soft x-rays but are nearly opaque to visible and infrared light. New Be/AG filters protect imaging X-ray detectors from damage by visible and longer wavelength radiation when viewing such hot, bright emitters as Sun or possibly certain industrial processes.

B84-10061 FREQUENCY-MODULATION CORRELATION SPECTROMETER

J. S. MARGOLIS (CALTECH) and J. V. MARTONCHIK (CALTECH)

Jan. 1985

NPO-15558

Vol. 8, No. 3, P. 347

New type of correlation spectrometer eliminates need to shift between two cells, one empty and one containing reference gas. Electrooptical phase modulator sinusoidally shift frequencies of sample transmission spectrum.

B84-10062 PUMP-FED VERSUS PRESSURE-FED PROPULSION

P. N. ESTEY (CALTECH)

Jan. 1985

NPO-15190

Vol. 8, No. 3, P. 348

Pumping system has lower mass. Equations worked out to compare masses of pump and pressure-fed bipropellant propulsion systems. Equations developed specifically for interplanetary spacecraft but technique adaptable to advanced automotive energy-storage techniques.

B84-10063 MONITORING OF REACTIVE ATMOSPHERIC SPECIES

C. R. WEBSTER (CALTECH)

Jan. 1985

NPO-15981

Vol. 8, No. 3, P. 348

Reactive atmospheric species produced and detected to provide reference spectra. Compact device insensitive to scattered light and has low power consumption.

B84-10064 THERMAL-EXPANSION MEASUREMENT

J. H. DAVIS (University of Alabama) and C. RIVES (University of Alabama)

Jan. 1985

MFS-27000

Vol. 8, No. 3, P. 348

Precise stable laser system determines coefficients of thermal expansion. Dual-beam interferometer arrangement monitors changes in sample length as function of temperature by following changes in optical path lengths.

B84-10065 INTEGRATED SYSTEM FOR ENVIRONMENTAL SIMULATION

R. UDA (Planning Research Corp.), S. DANDAGE (Planning Research Corp.), and D. MACDONALD (Planning Research Corp.)

Jan. 1985

KSC-11274

Vol. 8, No. 3, P. 348

Integrated testing system subjects ground-support

equipment for Space Shuttle to conditions that prevail during launch. Concept also applies to testing other equipment that must function faultlessly in difficult environment.

**B84-10066
FLEXIBLE MIRROR MOUNT FOR MICHELSON INTERFEROMETER**

G. S. PERKINS (CALTECH)

Jan. 1985

NPO-15746

Vol. 8, No. 3, P. 348

Interferometer mirrors mounted on flexible spring strips. Mounts used in folded-beam Michelson interferometer designed to monitor pollutants at altitude of 40,000 meters.

**B84-10067
ADJUSTABLE-FREQUENCY SPECTROPHONE LASER STABILIZATION**

M. J. KAVAYA (CALTECH) and R. T. MENZIES (CALTECH)

Jan. 1985

NPO-15516

Vol. 8, No. 3, P. 348

Gas laser frequency stabilizing system includes sensitive spectrophone that senses dither modulation of frequency of laser beam, producing Lorentzian, Voigt, or Doppler spectral tuning response.

**B84-10068
EVALUATING SOLAR COLLECTORS**

L. C. WEN (CALTECH), P. T. POON (CALTECH), W. J. CARLEY (CALTECH), and L. HUANG (U.S. Navy)

Jan. 1985

NPO-15733

Vol. 8, No. 3, P. 349

Survey discusses several methods for assessing performance of solar-concentrator designs to determine whether given design suitable for given high-temperature solar powered generator system.

**B84-10069
SOLAR-POWERED WATER DISTILLATION**

F. J. MENNINGER (CALTECH) and R. J. ELDER (CALTECH)

Jan. 1985

NPO-15894

Vol. 8, No. 3, P. 349

Solar-powered still produces pure water at rate of 6,000 gallons per year. Still fully automatic and gravity-fed. Only outside electric power is timer clock and solenoid-operated valve. Still saves \$5,000 yearly in energy costs and pays for itself in 3 1/2 years.

**B84-10070
ASSESSING THE PERFORMANCE OF SOLAR ARRAYS**

R. G. ROSS JR. (CALTECH) and C. C. GONZALEZ (CALTECH)

Jan. 1985

NPO-15277

Vol. 8, No. 3, P. 349

Selected environmental conditions more effective than traditional parameters. Report analyzes selection of reference criteria for comparing performances of photovoltaic arrays.

**B84-10071
SOLAR-THERMAL-DESALINATION STUDY**

L. D. LEIBOWITZ (CALTECH), T. M. LIU (CALTECH), and H. Q. PHAM (CALTECH)

Jan. 1985

NPO-15795

Vol. 8, No. 3, P. 349

Survey assessing economic feasibility of advanced solar-thermal technologies for desalination described in report.

**B84-10072
SUPPORT SYSTEM FOR SOLAR RECEIVERS**

T. KICENIUK (CALTECH)

Jan. 1985

NPO-15749

Vol. 8, No. 3, P. 349

Hinged split-ring mounts insure safe support of heavy receivers. In addition to safer operation and damage-free

mounting system provides more accurate focusing, and small incremental adjustments of ring more easily made.

**B84-10073
TESTING FOR SOLAR-ARRAY HOTSPOTS**

C. C. GONZALEZ (CALTECH) and J. C. ARNETT (CALTECH)

Jan. 1985

NPO-15596

Vol. 8, No. 3, P. 350

Laboratory procedure developed for evaluating hot-spot endurance of photovoltaic modules under field-service conditions. Procedures used for qualification testing of modules.

**B84-10077
REFLECTING SCHMIDT/LITTROW PRISM IMAGING SPECTROMETER**

J. B. BRECKINRIDGE (CALTECH), N. A. PAGE (CALTECH), R. V. SHACK (CALTECH), and R. R. SHANNON (CALTECH)

Apr. 1985

NPO-15801

Vol. 8, No. 4, P. 481

High resolution achieved with wide field of view. Imaging Spectrometer features off-axis reflecting optics, including reflecting 'slit' that also serves as field flattener. Only refracting element is prism. By scanning slit across object or scene and timing out signal, both spectral and spatial information in scene are obtained.

**B84-10278
LASER RANGEFINDER AND REMOTE PROFILOMETER**

J. M. MCLAUCHLAN (CALTECH), J. AUYEUNG (CALTECH), E. F. TUBBS (CALTECH), W. G. GOSS (CALTECH), and D. PSALTIS (CALTECH)

Apr. 1985

NPO-15865

Vol. 8, No. 4, P. 482

Proposed laser rangefinder and profilometer operates with precision of about 1mm at ranges of up to 100m. With scanning optics, device could track objects or accurately measure shapes of objects in field of view. New microprocessor-controlled design uses variable-length fiber-optic delay line as distance reference. New ranging method used in vision systems for industrial robots.

**B84-10279
RAPID FREEZING-POINT MEASUREMENT**

B. MATHIPRAKASAM (Midwest Research Institute)

Apr. 1985 See Also CR-167981 (N83-10207)

LEW-14019

Vol. 8, No. 4, P. 483

Technique developed for rapid determination of freezing-point temperature of fuels. Technique determines freezing point in under 10 minutes and is suitable for use in design of portable device.

**B84-10280
DETERMINING THE SLOPE ERROR OF A PARABOLIC REFLECTOR**

G. R. CHRIST (AAI Corporation)

Apr. 1985

NPO-15713

Vol. 8, No. 4, P. 484

Approximate slope error determined with minimal test equipment. Test Setup for Determining Slope Error for Point-Focusing Dish includes pinhole camera at center of curvature and color-coded target mounted around pinhole. Floodlights illuminate target to minimize exposure time. New procedure provides good approximation of reflector slope error and is excellent tool for comparative analysis of reflectors used as solar collectors for microwave receivers.

**B84-10281
INTERFEROMETER FOR MEASURING ACOUSTIC SIGNALS**

R. O. CLAUS (Virginia Polytechnic Institute and State University) and A. O. GARG (Virginia Polytechnic Institute and State University)

Apr. 1985

03 PHYSICAL SCIENCES

LAR-13030

Vol. 8, No. 4, P. 484

Optical-fiber interferometer measures wave amplitude without contacting specimen surface. System contains remote detector head. Head includes beam splitter that divides input beam and recombines output beams, while spatial filter filters interference pattern at beam-splitter output; and lens focuses this on detector. Beams focused on specimen surface to record acoustic signals.

B84-10282

ROOF OVERHANGS FOR SOLAR HOUSES

W. GRACEY

Apr. 1985

LAR-13140

Vol. 8, No. 4, P. 485

Convenient graphical method determines both width and vertical position of overhangs for standard wall section having 'typical' window arrangement. Overhangs for this wall section determined for two extremes of latitude in United States.

B84-10283

TELESCOPING SHIELD FOR POINT-FOCUSING SOLAR CONCENTRATORS

M. ARGOUD (CALTECH), W. WALKER (CALTECH), and L. V. BUTLER (CALTECH)

Apr. 1985

NPO-16236

Vol. 8, No. 4, P. 486

Telescoping shield normally stowed around solar receiver protects heat engine and supporting structure from overheating when concentrator aimed few degrees away from line to Sun. When extended, shield intercepts off center concentrated solar radiation. Heat spread out over thermally conductive shield and reradiated diffusely not to cause structural damage.

B84-10284

MAXIMUM OUTPUTS OF SOLAR PHOTOVOLTAIC ARRAYS

R. G. ROSS JR. (CALTECH), G. M. HILL (CALTECH), and C. C. GONZALEZ (CALTECH)

1985

NPO-15966

Vol. 8, No. 4, P. 487

Report presents electrical data for solar photovoltaic arrays operating at different locations in United States. Data useful in designing power-conditioners for matching output of array to load.

B84-10285

LASER POLLUTANT-MEASURING SYSTEMS

W. B. GRANT (CALTECH) and R. T. MENZIES (CALTECH)

Apr. 1985

NPO-16101

Vol. 8, No. 4, P. 487

Laser optical system for remote gas pollutant measurements surveyed. Laser systems discussed in published report, and choices of appropriate gas measuring instruments and their sensitivities evaluated.

B84-10286

RETRIEVAL OF GEOPHYSICAL PARAMETERS FROM RADIOMETRIC DATA

P. C. PANDEY (CALTECH) and R. K. KAKAR (CALTECH)

Apr. 1985

NPO-16266

Vol. 8, No. 4, P. 487

Rapid linear algorithm retrieves meteorological parameters from microwave radiometric data. Versatile 2-step, multiple-linear-regression algorithm examines all possible subsets of available channels and selects optimum subset for retrieving given geophysical or meteorological parameter.

B84-10287

INSTRUMENTATION FOR SOLAR-OSCILLATION MEASUREMENTS

E. J. RHODES JR. (CALTECH), T. W. ANDREWS (CALTECH), E. J. SMITH (CALTECH), R. F. HOWARD (Mount Wilson Observatory), and R. K. ULRICH (UCLA)

Apr. 1985

NPO-15687

Vol. 8, No. 4, P. 488

System works with any telescope with spectrograph without interfering with existing use of spectrograph. Telescope aiming accuracy is 1 arc-second.

B84-10288

SOLAR-POWER SYSTEM PRODUCES HIGH-PRESSURE STEAM

F. L. LANSING (CALTECH)

Apr. 1985

NPO-15434

Vol. 8, No. 4, P. 488

Combination of three multistaged solar collectors produces highpressure steam for large-scale continuously operating turbines for generating mechanical or electrical energy. Superheated water vapor drives turbines, attaining an overall system efficiency about 22 percent.

B84-10289

FRESNEL-LENS/HEAT-STORAGE SYSTEM

R. H. TURNER (CALTECH)

Apr. 1985

NPO-16242

Vol. 8, No. 4, P. 488

Self-contained solar-thermal power-plant uses Fresnel lenses to deliver up to 100 kilowatts. Proposed 200-volt system uses about 800 Fresnel lenses.

B84-10290

TEN THOUSAND SOLAR CONSTANTS RADIOMETER

J. M. KENDALL SR. (CALTECH)

Apr. 1985

NPO-15922

Vol. 8, No. 4, P. 488

'Radiometer for Accurate (+ or - 1%) Measurement of Solar Irradiances Equal to 10,000 Solar Constants,' gives additional information on radiometer described elsewhere. Self-calibrating, water-cooled, thermopile radiometer measures irradiance produced in solar image formed by parabolic reflector or by multiple-mirror solar installation.

B84-10291

HEAT STORAGE AND TRANSPORT

P. A. BAHRAMI

Apr. 1985

NPO-15468

Vol. 8, No. 4, P. 488

System for storing large amounts of heat per unit volume comprises encapsulated sealed pellets of phase-change materials dispersed and suspended in inert fluid-transport medium.

B84-10292

SOLAR SHUTTER

R. R. HALE (CALTECH)

Apr. 1985

NPO-15428

Vol. 8, No. 4, P. 489

Solar receiver turned off by movable reflective shutter. When reflective surface interposed across optical axis, incoming solar heat reflected back to concentrator for rejection into space.

B84-10293

SOLAR-HEATED GASIFIER

S. A. QADER (CALTECH)

Apr. 1985

NPO-15071

Vol. 8, No. 4, P. 488

Catalytic coal and biomass gasifier system heated by solar energy. Sunlight from solar concentrator focused through quartz window onto ceramic-honeycomb absorber surface, which raises temperature of reactant steam, fluidizing gas, and reactor walls.

B84-10294

POINT-FOCUSING SOLAR-POWER DISTRIBUTED RECEIVERS

J. W. LUCAS (CALTECH)

Apr. 1985

NPO-15578

Vol. 8, No. 4, P. 489

Two-volume annual report describes development work

aimed at achieving large-scale production of modular, point-focusing distributed receivers (PFDR's) for solar-powered generation of electricity or thermal power for industrial use.

**B84-10295
PURIFICATION OF SOLAR PONDS**
S. CARPENTER

Apr. 1985

NPO-15397 Vol. 8, No. 4, P. 489
Flocculatory agents added to solar saltponds remove turbidity to increase solar-energy collection efficiency. Flocculating agent or bactericide used to remove microorganisms sprayed onto pond from airplane and allowed to settle to bottom of pond.

**B84-10296
A CERAMIC HEAT EXCHANGER FOR SOLAR RECEIVERS**
C. ROBERTSON JR. (General Electric Co.) and L. STACY (General Electric Co.)

Apr. 1985

NPO-15771 Vol. 8, No. 4, P. 489
Design intended for high-temperature service. Proposed ceramic-tube and header heat exchangers used for solar-concentrating collector operating in 25- to 150-KW power range at temperatures between 2,000 degrees and 3,000 degrees F (1,095 degrees and 1,650 degrees C).

**B84-10297
CALIBRATING FOR IONOSPHERIC PHASE DELAYS**
P. F. MACDORAN (CALTECH)

Apr. 1985

NPO-15430 Vol. 8, No. 4, P. 489
Technique determines ionospheric phase delay on real-time universally applicable basis in terms of electrons per meter squared by coherently modulating two L-band carrier frequencies received from two Global Positioning System satellites. Two pseudorandom number sequences cross-correlated to derive delay time.

**B84-10298
GENERAL DESIGN CONSIDERATIONS FOR REMOTE SENSORS**
F. C. BILLINGSLEY (CALTECH)

Apr. 1985

NPO-15930 Vol. 8, No. 4, P. 490
Report discusses design of orbiting remote sensors. Needs of users considered in light of satellite capabilities. Multiple-resolution sensor satisfies several disciplines otherwise competing for spatial and spectral resolution.

**B84-10299
ELECTRON-ATTACHMENT PROFILES**
A. CHUTJIAN and J. M. AJELLO

Apr. 1985

NPO-14865 Vol. 8, No. 4, P. 490
Report available that describes technique of photoelectron spectroscopy to measure shapes of threshold electron-attachment cross sections of various gases.

**B84-10300
COMPOSITE SPECTROMETER PRISMS**
J. B. BRECKINRIDGE (CALTECH), N. A. PAGE (CALTECH), and J. M. RODGERS (University of Arizona)

Apr. 1985

NPO-16060 Vol. 8, No. 4, P. 490
Efficient linear dispersive element for spectrometer instruments achieved using several different glasses in multiple-element prism. Good results obtained in both two-and three-element prisms using variety of different glass materials.

**B84-10301
THERMAL COMPENSATOR FOR PARABOLOIDAL REFLECTOR**

C. G. STANICH (Daedalus Enterprises, Inc.) and F. G. OSTERWISCH (Daedalus Enterprises, Inc.)

Apr. 1985

NPO-16145 Vol. 8, No. 4, P. 490
Mounting structure holds off-axis paraboloidal collimating mirror so that optical axis constantly focused and remains stationary with respect to fixed point over wide temperature range.

**B84-10302
PARABOLOIDAL-DISH POWER MODULES**
W. R. REVERE (CALTECH), J. M. BOWYER (CALTECH), T. FUJITA (CALTECH), and H. I. AWAYA (CALTECH)

Apr. 1985

NPO-16100 Vol. 8, No. 4, P. 490
Study determines configurational tradeoffs for particular paraboloidal-dish power system for isolated-load applications. Continuous level of power supplied with high reliability by using power system with modular paraboloidal-dish power units.

04 MATERIALS

**B84-10074
UPGRADING METALLURGICAL-GRADE SILICON**
L. M. WOERNER (J.C. Schumacher Co.) and E. B. MOORE (J.C. Schumacher Co.)

Jan. 1985

NPO-15076 Vol. 8, No. 3, P. 353
Closed-loop process produces semiconductor-grade silicon. Metallurgical-grade silicon converted to ultrapure silicon by reacting with hydrogen and silicon tetrahalide to form trihalosilane, purifying this intermediate and again decomposing to high purity silicon in third stage. Heterogeneously and homogeneously nucleated polycrystalline silicon used in semiconductor device applications and in silicon photovoltaic solar cell fabrication.

**B84-10075
CONTAINERLESS MANUFACTURE OF GLASS OPTICAL FIBERS**
R. J. NAUMANN and E. C. ETHRIDGE

Jan. 1985

MFS-25905 Vol. 8, No. 3, P. 354
Contamination and crystallization reduced in proposed process. Solid optical fiber drawn from an acoustically levitated lump of molten glass. New material added in solid form, melted and then moved into main body of molten glass. Single axis acoustic levitation furnances levitate glass melts at temperature up to about 700 degrees C. Processing in unit limited to low-melting temperature glasses.

**B84-10076
EQUATION FOR ELECTROLYTE VISCOSITY**
R. F. FEDORS (CALTECH)

Jan. 1985

NPO-15096 Vol. 8, No. 3, P. 355
Equation agrees with measurements over wide concentration range. Plot of calculated values from equation and measured values show close match except at extremely low concentrations of electrolyte. Other equations do not match data as well and limited to dilute solutions.

**B84-10077
PRESSURE-LETDOWN PLATES FOR COAL GASIFIERS**
E. R. COLLINS JR. (CALTECH)

Jan. 1985

NPO-15965 Vol. 8, No. 3, P. 355

04 MATERIALS

Variation of pseudoporous plates used with coal gasifiers in pressure letdown stage of processing minimize clogging. Rotating plates containing variable gap annuli continually change flow path to enable erosionless reduction of gas pressure. Particles that otherwise clog porous plugs pass through gaps.

B84-10078

TESTING CERAMICS FOR DIESEL ENGINES

H. W. SCHNEIDER (CALTECH)

Jan. 1985

NPO-15824

Vol. 8, No. 3, P. 356

Adaptation of diesel engine allows prestressed ceramic materials evaluated under realistic pressure, temperature, and stress without introducing extraneous stress. Ceramic specimen part of prechamber of research engine. Specimen held in place by clamp, introduces required axial compressive stress. Specimen -- cylindrical shell -- surrounded by chamber vented or pressurized to introduce requisite radial stress in ceramic. Pressure chamber also serves as safety shield in case specimen disintegrates. Materials under consideration as cylinder liners for diesel engines.

B84-10079

PURE GLASSES FROM MULTICOMPONENT GELS

S. P. MUKHERJEE (Battelle Columbus Laboratories)

Jan. 1985

NPO-16160

Vol. 8, No. 3, P. 357

Report describes experiments with multicomponent gels for preparation of pure glass. Experiments aimed at developing zero-gravitation process for fabrication of low-loss optical fibers.

B84-10080

VACUUM BAKING TO REMOVE VOLATILE MATERIALS

J. A. MUSCARI (Martin Marietta Corp.)

Jan. 1985

NPO-15648

Vol. 8, No. 3, P. 357

Outgassing reduced in some but not all nonmetallic materials. Eleven polymeric materials tested by determining outgassing species as temperature of conditioned and unconditioned materials raised to 300 degrees C. Conditioning process consisted of vacuum bake for 24 hours at 80 degrees C in addition to usual cure. Baking did not change residual gas percentage of water molecules.

B84-10081

SOLUTION POTENTIALS INDICATE ALUMINUM-ALLOY TEMPER

M. D. DANFORD

Jan. 1985 See Also NASA TM-82459 (N82-22345)

MFS-25846

Vol. 8, No. 3, P. 357

Report discusses use of solution potential as measure of temper of aluminum alloys. Technique based on fact that different tempers or heat treatments exhibit different solution potentials as function of aging time.

B84-10082

PROPERTIES OF LOW-EXPANSION LAMINATES

M. KURAL (Lockheed Missiles & Space Company, Inc.)

Jan. 1985

MFS-25859

Vol. 8, No. 3, P. 358

Laminate elastic constants and coefficients of thermal expansion calculated for near-zero-expansion graphite/aluminum and graphite/magnesium composites. Report presents results in graphic form for these properties as function of laminate angle and fiber volume fraction for four high-modulus continuous-pitch fiber.

B84-10083

ELASTOMER ENCAPSULANT FOR SOLAR-CELL ARRAYS

B. BAUM (Springborn Laboratories, Inc.) and P. B. WILLIS (Springborn Laboratories, Inc.)

Jan. 1985

NPO-15663

Vol. 8, No. 3, P. 358

Butyl acrylate syrups useful potting compounds for encapsulating photovoltaic cells in modular arrays. Material pourable liquid pumped into module, then cured to rubbery consistency. Cured material is thermoset elastomer highly transparent, low cost, flexible and with good low-temperature properties.

B84-10084

EUTECTIC-ALLOY MORPHOLOGY

R. G. PIRICH (Grumman Aerospace Corp.) and W. J. POIT (Grumman Aerospace Corp.)

Jan. 1985

MFS-25937

Vol. 8, No. 3, P. 358

Deviation in controlled-rod eutectic morphology anticipated for diffusion only crystal growth characterized at low solidification velocities. Naturally induced, gravity-related convective instabilities result in nonaligned irregularly dispersed fibers or platelets. Lower solidification limit for controlled growth Bi/Mn alloys is 1 centimeter/hour.

B84-10085

RELIABILITY STUDIES FOR FATIGUE-CRACK DETECTION

B. K. CHRISTNER (Martin Marietta Corp.), W. D. RUMMEL (Martin Marietta Corp.), and J. KNADLER (Martin Marietta Corp.)

Jan. 1985

MFS-27031

Vol. 8, No. 3, P. 358

Reusable test panels available to assess reliability of techniques that use fluorescent penetrant to detect fatigue cracks. Ultrasonic cleaning method developed for removing penetrant from panels prior to reuse.

B84-10086

MAKING PURE FINE-GRAINED INORGANIC POWDER

C. WOOD (CALTECH)

Jan. 1985

NPO-16398

Vol. 8, No. 3, P. 358

Sustained arc plasma chemical reactor fabricates very-fine-grained inorganic solids having low thermal conductivity. Powder fabrication method, based on plasma tube technique produces pure solids without contamination commonly produced by grinding.

B84-10087

FLUIDIZED-BED REACTOR SYSTEM

A. D. MORRISON (CALTECH)

Jan. 1985

NPO-15975

Vol. 8, No. 3, P. 359

Gas pyrolysis in hot fluidized beds minimized by use of selectively filtered radiation and parabolic cavity. Reactor is parabolic cavity of two or more axes in which light emanating from one axis bounces off walls of cavity and passes through object axis to heat sample.

B84-10088

SAMARIUM/COBALT MAGNETS

D. DAS (Charles Stark Draper Laboratories, Inc.), K. KUMAR (Charles Stark Draper Laboratories, Inc.), R. FROST (Charles Stark Draper Laboratories, Inc.), and C. CHANG (Charles Stark Draper Laboratories, Inc.)

Jan. 1985

MFS-27006

Vol. 8, No. 3, P. 359

Intrinsic magnetic coercivities of samarium cobalt magnets made to approach theoretical limit of 350 kA/m by carefully eliminating oxygen from finished magnet by hot isostatic pressing (HIP). HIP process viable alternative to currently used sintering process.

B84-10089

REDUCING LIQUID PERMEATION THROUGH POLYMER SHEETS

R. F. FEDORS (CALTECH)

Jan. 1985

NPO-15802

Vol. 8, No. 3, P. 359

Permeation of liquid through polymer sheets retarded by including in polymer solute for excluded liquid. Long-term or steady state permeability not reduced by solute inclusions.

B84-10090
COAL-FACE FRACTURE WITH A TWO-PHASE LIQUID
E. R. COLLINS JR. (CALTECH)
Jan. 1985
NPO-15849 Vol. 8, No. 3, P. 359

In new method for mining coal without explosive, two-phase liquid such as CO₂ and water, injected at high pressure into deeper ends of holes drilled in coal face. Liquid permeates coal seam through existing microfractures; as liquid seeps back toward face, pressure eventually drops below critical value at which dissolved gas flashvaporizes, breaking up coal.

B84-10091
POLYURETHANE-FOAM MASKANT
R. BODEMEIJER (Rockwell International Corp.)
Jan. 1985
MFS-19786 Vol. 8, No. 3, P. 359

Brown wax previously used to mask hardware replaced with polyurethane foam in electroplating and electroforming operations. Foam easier to apply and remove than wax and does not contaminate electrolytes.

B84-10092
STREAMING-POTENTIAL STUDIES
D. GREGONIS (University of Utah), R. VAN WAGENEN (University of Utah), S. MA (University of Utah), and J. ANDRADE (University of Utah)
Jan. 1985
MFS-25657 Vol. 8, No. 3, P. 359

Apparatus and experimental technique based on measurements of streaming potentials evaluates effects of surface coatings for reducing or eliminating electro-osmotic flow.

B84-10093
MATHEMATICAL MODEL FOR GAS DISSOLUTION IN GLASS
M. C. WEINBERG (GTE), P. I. ORONATO (GTE), and D. R. UHLMANN (MIT)
Jan. 1985
NPO-15104 Vol. 8, No. 3, P. 360

Mathematical model calculates rate of small oxygen-bubble contraction in soda/lime/silicate melts in presence of foreign nondiffusing gas. Process of interest in optical glass fabrication.

B84-10303
DESULFURIZATION OF COAL IN FLUIDIZED BEDS
R. MADDURY (CALTECH) and J. KALVINSKAS (CALTECH)
Apr. 1985
NPO-15924 Vol. 8, No. 4, P. 493

Experimental dry chemical process for removing sulfur from coal-and thereby reducing harmful sulfur emissions from coal-fired electric powerplants-promises more economical and effective than older wet chemical processes. New process faster, requires smaller amounts of chemical reagents, and produces no liquid effluents, which poses disposal problem.

B84-10304
INCREASING THE DUCTILITY OF ELECTROPLATED METALS
N. PATON (Rockwell International Corp.) and C. RHODES (Rockwell International Corp.)
Apr. 1985
MFS-19873 Vol. 8, No. 4, P. 494

Hot isostatic pressing effective in improving ductility of metal plating. Previously hot isostatic pressing used on powder-metallurgy parts and castings but not on electroplated parts. To test idea, copperplated heated to 800 degrees C at pressure of 23,000 psi (160 MN/m²) for 4 hours.

When part examined metallographically, completely free from porosity.

B84-10305
EUTECTIC CONTACT INKS FOR SOLAR CELLS
B. ROSS (Bernd Ross Associates)
Apr. 1985
NPO-15171 Vol. 8, No. 4, P. 494

Low-resistance electrical contacts formed on solar cells by melting powders of eutectic composition of semiconductor and dopant. Process improves cell performance without subjecting cell to processing temperatures high enough to degrade other characteristics.

B84-10306
LIGHTWEIGHT HIGH-TEMPERATURE THERMAL INSULATION
W. R. WAGNER (Rockwell International Corp.) and J. I. FASHEH (Rockwell International Corp.)
Apr. 1985
MFS-19754 Vol. 8, No. 4, P. 495

Fine Ni/Cr fibers sintered into corrosion-resistant, fireproof batt. Possible applications include stoves, furnaces, safes, fire clothing, draperies in public buildings, wall firebreaks, airplane walls, and jet engine components. New insulation takes advantage of some of same properties of nickel/chromium alloy useful in heating elements in toasters, namely, corrosion and oxidation resistance even at high temperatures.

B84-10307
INHIBITING WET OXIDATION OF AMMONIA
D. B. L. ONISKO (National Research Council)
Apr. 1985
ARC-11407 Vol. 8, No. 4, P. 496

Simple modification of wet-oxidation process for treating organic waste reduces loss of fixed nitrogen, potentially valuable byproduct of process. Addition of sufficient sulfuric acid to maintain reaction pH below 3 greatly reduces oxidation of ammonia to free nitrogen. No equipment modification required.

B84-10308
APPLYING UNIFORM POLYMER COATINGS TO MICROSOPHERES
M. C. LEE (CALTECH)
Apr. 1985
NPO-16075 Vol. 8, No. 4, P. 496

Acoustic levitation yields even coating on glass microspheres. Automatic Coating Apparatus injects polymer into acoustic levitator, moves glass sphere into polymer, dries polymer, and removes coated sphere. Apparatus injects more polymer for coating another sphere, and cycle repeats.

B84-10309
DEFECT CHEMISTRY OF HG1-XCDXTE
H. VYDYANATH (Honeywell, Inc.), D. NELSON (Honeywell, Inc.), J. DONOVAN (Honeywell, Inc.), P. CRICKARD (Honeywell, Inc.), A. BARNES (Honeywell, Inc.), R. ABBOTT (Honeywell, Inc.), and R. LANCASTER (Honeywell, Inc.)
Apr. 1985
MFS-25851 Vol. 8, No. 4, P. 497

Intermediate goal of this investigation to correlate nature and concentration of lattice defects with physicochemical conditions of preparation; namely, temperature, partial pressures of constituent elements and/or dopant concentration. Result of this investigation: possible to predict and control nature and concentration of defects as function of preparation conditions.

B84-10310
LOW-TEMPERATURE EXTRACTION OF OIL FROM SHALE
L. E. COMPTON (CALTECH)
Apr. 1985
NPO-15656 Vol. 8, No. 4, P. 498

04 MATERIALS

Technique increases recovery and energy efficiency. Advantages of method greater product yield and, because of the relatively low temperatures, minimal gas formation, smaller amounts of char byproduct, and less carbonate-rock decomposition. Up to 94 percent by weight of organic material in shale extracted.

B84-10311
HIGH-TEMPERATURE COATING FOR TITANIUM
R. J. MELL (IIT Research Institute) and Y. HARADA (IIT Research Institute)
Apr. 1985

NPO-16222 Vol. 8, No. 4, P. 498
Wet coating mixture composed of graphite pigment potassium silicate binder solution and distilled water. Resulting coating has electrical resistivity of less than 10 to the 6th power ohm-cm.

B84-10312
PREDICTING POLYMER/LIQUIDE INTERACTIONS
R. F. FEDORS (CALTECH)

Apr. 1985
NPO-14874 Vol. 8, No. 4, P. 498
Calculations of liquid absorption by rubber vulcanizates agree with experimental results. Equation allows calculation of swelling of rubber vulcanizates by liquids, based on knowledge of chemical structure of polymer and solvent. Calculated values agree favorably with experimental data.

B84-10313
SILICON FORMATION FOR SOLAR CELLS
K. SANCIER (SRI International)

Apr. 1985
NPO-14973 Vol. 8, No. 4, P. 498
Highly pure silicon obtained for solar cells by proposed technique that sprays liquid-sodium droplets into SiF₄ gas. Resulting freely flowing powder of silicon and sodium fluoride will not adhere to reactor walls and easily transferred to melt separator to recover silicon.

B84-10314
INTEGRATED FUEL CELL/COAL GASIFIER
J. F. FERRALL (CALTECH)

Apr. 1985
NPO-16062 Vol. 8, No. 4, P. 498
Powerplant design with low-temperature coal gasifier coupled to highly-exothermic fuel cell for efficient production of dc power eliminates need for oxygen in gasifier and achieves high fuel efficiency with recycling of waste heat from fuel cell.

B84-10315
ELASTOMERIC CATHODE BINDER
S. P. S. YEN (CALTECH), D. S. SHEN (CALTECH), and R. B. SOMOANO (CALTECH)

Apr. 1985
NPO-15424 Vol. 8, No. 4, P. 499
Soluble copolymer binder mixed with cathode material and solvent forms flexible porous cathode used in lithium and Ni/Cd batteries. Cathodes prepared by this process have lower density due to expanding rubbery binder and greater flexibility than conventional cathodes. Fabrication procedure readily adaptable to scaled-up processes.

B84-10316
ACTIVATED INTERNAL GETTERING
J. K. LIU (CALTECH), G. H. SCHWUTKE, and K. M. KOLIWAD

Apr. 1985
NPO-15530 Vol. 8, No. 4, P. 499
Lifetimes of minority carriers in silicon webs improved by annealing. Heat treatment of silicon web ribbons considerably improves efficiency of solar cells.

B84-10317
PREPARING INSB SUBSTRATES

R. P. VASQUEZ (CALTECH), B. F. LEWIS (CALTECH), and F. J. GRUNTHANER (CALTECH)

Apr. 1985
NPO-16127 Vol. 8, No. 4, P. 499
Molecular-beam epitaxial substrates passivated by chloride film growth. Chloride layer produced by direct chlorination, by chloride radicals in solutions, or by formation of preliminary oxide layer followed by chloride substitution.

B84-10318
CLEANING THE WALLS OF A SILANE REACTOR
K. A. YAMAKAWA (CALTECH)

Apr. 1985
NPO-15851 Vol. 8, No. 4, P. 499
Scraper removes silicon deposits from inner walls of reactor vessel. Scraper supported by gas bearing. Scraper made of non-contaminating material such as quartz or silicon.

B84-10319
STABILIZED ALUMINUM TITANATE
J. E. SCHROEDER (CALTECH)

Apr. 1985
NPO-16227 Vol. 8, No. 4, P. 499
Stable, potentially-inexpensive, cubic crystalline alpha aluminum titanate that shows no phase change to 1,700 K used in heat exchangers. Particular stabilizing species must be selected with careful attention to crystal dimensions and bond angles of alpha and beta phases of aluminum titanate.

B84-10320
MOLTEN-SALT ELECTROLYSIS
D. CUBICCIOTTI (SRI International)

Apr. 1985
NPO-15535 Vol. 8, No. 4, P. 499
Concept of electrolytic decomposition of gaseous hydrogen sulfide to yield gaseous sulfur at anode and hydrogen gas at cathode considered.

05 LIFE SCIENCES

B84-10094
TRANSDUCERS FOR HEAT RESEARCH
C. FELDSTEIN (CALTECH), S. MEERBAUM (CALTECH), G. W. LEWIS (CALTECH), and V. H. CULLER (CALTECH)

Jan. 1985
NPO-15095 Vol. 8, No. 3, P. 363
Series of transducers with seven different configurations enable measurement of forces and displacements in heart wall. New transducers small, cause minimal perturbation of heart function and attached and detached without causing excessive tissue damage. All units implanted or removed during single heartbeat, permitting rapid relocation for detail mapping.

B84-10095
AQUATIC PLANTS AID SEWAGE FILTER
B. C. WOLVERTON

Jan. 1985
MFS-25808 Vol. 8, No. 3, P. 364
Method of wastewater treatment combines micro-organisms and aquatic plant roots in filter bed. Treatment occurs as liquid flows up through system. Micro-organisms, attached themselves to rocky base material of filter, act in several steps to decompose organic matter in wastewater. Vascular aquatic plants (typically, reeds, rushes, cattails, or water hyacinths) absorb nitrogen, phosphorus, other nu-

trients, and heavy metals from water through finely divided roots

B84-10096
MONITORING MARINE MICROBIAL FOULING
R. COLWELL (University of Maryland)

Jan. 1985

MFS-25928

Vol. 8, No. 3, P. 364

Two techniques developed for studying marine fouling. Methods originally developed to study fouling of materials used in Space Shuttle solid fuel booster rockets. Methods used to determine both relative fouling rates and efficacy of cleaning methods to remove fouling on various surfaces including paints, metals, and sealants intended for marine use.

B84-10097
EXPERIMENTAL ECOSYSTEMS SEALED IN GLASS
J. A. HANSON (CALTECH)

Jan. 1985

NPO-15712

Vol. 8, No. 3, P. 365

Report describes investigation of dynamics of microbial ecosystems sealed in 1-liter flasks and exposed to Sunlight or artificial light for extended periods. Many organisms survived more than 15 years. Such systems have primary productivity and quantum efficiencies comparable to estimates for Earth's ecosystems.

B84-10098
ESTIMATING HEALTH SERVICES REQUIREMENTS
H. M. ALEXANDER (CALTECH)

Jan. 1985

NPO-14151

Vol. 8, No. 3, P. 366

In computer program NOROCA populations statistics from National Center for Health Statistics used with computational procedure to estimate health service utilization rates, physician demands (by specialty) and hospital bed demands (by type of service). Computational procedure applicable to health service area of any size and even used to estimate statewide demands for health services.

B84-10099
PARAMETERS AFFECTING ELECTROPHORESIS
J. VANDERHOFF (Lehigh University) and F. MICALÉ (Lehigh University)

Jan. 1985

MFS-25593

Vol. 8, No. 3, P. 366

Experimental approaches and problems facing successful continuous particle separation by electrophoresis outlined in short report. Influence of particle size, concentration, and charge discussed.

B84-10100
DIALYSIS EXTRACTION FOR CHROMATOGRAPHY
V. J. JAHNSEN (CALTECH)

Jan. 1985

NPO-15691

Vol. 8, No. 3, P. 366

Chromatographic-sample pretreatment by dialysis detects traces of organic contaminants in water samples analyzed in field with minimal analysis equipment and minimal quantities of solvent. Technique also of value wherever aqueous sample and solvent must not make direct contact.

B84-10321
PROBE FOLLOWER FOR MOVING BLOOD VESSELS
R. E. FRAZER (CALTECH) and T. W. ANDREWS (CALTECH)

Apr. 1985

NPO-15898

Vol. 8, No. 4, P. 503

Probes track vessel expansion and contraction with minimal perturbation. Nozzle back-pressure changes at cuff on blood vessel basis for monitoring position of probe in blood vessel. Fluidic amplifiers use signals to control three-axis servo that centers measuring probe between sensing-nozzle pairs at cuff.

B84-10322
PHOTOGRAPHIC SCREENING FOR EYE DEFECTS
J. RICHARDSON

Apr. 1985 See Also NASA TM-82359 (N83-34565/NSP)

MFS-27045

Vol. 8, No. 4, P. 504

Images of retinas examined for characteristic patterns. Color photographs of retinas taken. Proper alignment of eye obtained by asking subject to gaze at light-emitting diode. 'Red-eye' patterns in resulting color photographs examined by trained observers for signs of ocular defects. System used to check power of contact lenses and eyeglasses by taking photographs with these items in place.

06 MECHANICS

B84-10101
TEMPERATURE-GRADIENT FURNACE FOR SOLIDIFICATION EXPERIMENTS
B. R. ALDRICH and W. D. WHITT

Jan. 1985

MFS-25963

Vol. 8, No. 3, P. 369

Gradients are controllable from zero to 500 degrees C/cm. Typical temperature profile superimposed on partial cross section of furnace. Steepness of gradient varied by adjusting flow of energy to and from different zones of furnace. Specimen placed in ampoule moved inside ceramic tube according to needs of experiment. Furnace provides axial temperature profiles for material processing experiments.

B84-10102
IMPROVED ELLIPSOIDAL RADIATION FURNACE
E. C. ETHRIDGE

Jan. 1985

MFS-25933

Vol. 8, No. 3, P. 370

Spherical reflector around heat source increases efficiency and minimizes power requirements. Furnace consists of ellipsoid with point heat source, at one focus and sample heated at other focus. Spherical reflector with circular slit surrounds heat source. All radiation not passing through circular slit in spherical reflector reflected back to lamp. Radiation passing through spherical slit focused by ellipsoid surface onto sample. Arrangement uses heat efficiently, reduces waste heat generation and permits full view of specimen.

B84-10103
DOUBLE LINEAR DAMAGE RULE FOR FATIGUE ANALYSIS
G. HALFORD and S. MANSON (Case Western Reserve University)

Feb. 1985 See Also NASA TM-81517 (N80-23684/NSP)

LEW-14058

Vol. 8, No. 3, P. 371

Double Linear Damage Rule (DLDR) method for use by structural designers to determine fatigue-crack-initiation life when structure subjected to unsteady, variable-amplitude cyclic loadings. Method calculates in advance of service how many loading cycles imposed on structural component before macroscopic crack initiates. Approach eventually used in design of high performance systems and incorporated into design handbooks and codes.

B84-10104
EDDY-CURRENT INSPECTION OF BALL BEARINGS
B. BANKSTON

Jan. 1985

MFS-25833

Vol. 8, No. 3, P. 371

Custom eddy-current probe locates surface anomalies.

06 MECHANICS

Low friction air cushion within cone allows ball to roll easily. Eddy current probe reliably detects surface and near-surface cracks, voids, and material anomalies in bearing balls or other spherical objects. Defects in ball surface detected by probe displayed on CRT and recorded on strip-chart recorder.

B84-10105

SURFACE-STREAMLINE FLOW VISUALIZATION

L. LANGSTON (University of Connecticut) and M. BOYLE (University of Connecticut)
Jan. 1985

LEW-13875

Vol. 8, No. 3, P. 372

Matrix of ink dots covers matte surface of polyester drafting film. Film placed against wind-tunnel wall. Layer of methyl salicylate (oil of wintergreen) sprayed over dotted area. Ink dot streaklines show several characteristics of flow, including primary saddle point of separations, primary horseshoe vortex and smaller vortex at cylinder/endwall junction. Surface streamline flow visualization technique suitable for use in low-speed windtunnels or other low-speed gas flows.

B84-10106

STRUCTURAL TURNBUCKLE BEARS COMPRESSIVE OR TENSILE LOADS

W. A. BATEMAN (Rockwell International Corp.) and C. H. LANG (Rockwell International Corp.)
Jan. 1985

MFS-25939

Vol. 8, No. 3, P. 373

Column length adjuster based on turnbuckle principle. Device consists of internally and externally threaded bushing, threaded housing and threaded rod. Housing attached to one part and threaded rod attached to other part of structure. Turning double threaded bushing contracts or extends rod in relation to housing. Once adjusted, bushing secured with jamnuts. Device used for axially loaded members requiring length adjustment during installation.

B84-10107

BEAM WINDOW FOR PRESSURE CHAMBERS

J. W. BRANSFORD (National Bureau of Standards) and J. G. AUSTIN JR. (National Bureau of Standards)
Jan. 1985

MFS-25961

Vol. 8, No. 3, P. 374

Window resists products of combustion experiments. Sodium chloride window seals over chamber pressures from 0.1 to 13.8 MPa while absorbing minimal energy from CO₂ laser beam that passes through it into chamber. Window inexpensive and easily replaceable.

B84-10108

FABRICATING THIN-SHELL HEAT-TRANSFER MODELS

D. E. AVERY, G. K. BALLARD, M. L. WILSON, and J. H. ALLEN SR. (Johnson Space Center)
Jan. 1985

LAR-13087

Vol. 8, No. 3, P. 375

Freestanding shells produced for experimental aerodynamic-heating tests. Heat transfer shells require several steps and several precise molds. First, interlocking aluminum male and female molds fabricated. Holes for thermocouples drilled through male mold at desired locations. Wires having same diameter as thermocouple wire placed through holes in male mold flush to female mold. Epoxy exposed to vacuum to remove air bubbles poured between male and female molds to form thin female mold. Once mold cured, wires removed and aluminum molds separated.

B84-10109

FLEXIBLE HEAT PIPE

W. B. BIENERT (Dynatherm Corp.) and D. A. WOLF (Dynatherm Corp.)
Jan. 1985

GSC-12864

Vol. 8, No. 3, P. 376

Narrow Tube carries 10 watts or more to moving parts. Heat pipe 12 inches long and diameter of 0.312 inch

(7.92mm). Bent to minimum radius of 2.5 blocks. Flexible section made of 321 stainless steel tubing (Cajon Flexible Tubing or equivalent). Evaporator and condenser made of oxygen free copper. Working fluid methanol.

B84-10110

UNIFORM-TEMPERATURE WALLS FOR CLOUD CHAMBERS

G. FLEISCHMAN (Hughes Aircraft Co.)

Jan. 1985

MFS-25931

Vol. 8, No. 3, P. 376

Flat heat pipes rapidly transfer heat to and from experimental volumes. Heat pipe vapor chamber carries heat to and from thermo electric modules. Critical surface acts as evaporator or condenser in cloud physics experiments. Used as walls of spaceborne atmospheric cloud chambers. On Earth, used as isothermal floors for environmental test chambers.

B84-10111

ENERGY-ABSORBING AIRFRAMES FOR GENERAL AVIATION

H. D. CARDEN, R. J. HAYDUK, J. CRONKHITE (Helicopter Textron, Inc.), and V. BERRY (Helicopter Textron, Inc.)
Jan. 1985 See Also NASA CR-3603 (N82-33735/NSP)

LAR-12808

Vol. 8, No. 3, P. 377

Concept for protecting people in lightweight airplane crashes involves redesigning area between interior floor and outer skin of airplane belly to create subfloor strong enough to bear stresses of flight but crush under force of impact. Several concepts evaluated and five selected and designed as lower fuselage sections tested in NASA's crash-testing program. Notched corner concept, Corrugated Beam concept, Foam-Filled Cylinder concept, Corrugated Half Shell concept, and Canted Bulkhead concept. Experimental and analytical results indicate all five concepts perform well; upper floor remains structurally intact whereas crush zone collapses under essentially constant load.

B84-10112

INTERFEROMETER DETECTS ACOUSTIC EMISSIONS IN COMPOSITES

J. H. CANTRELL JR., R. O. CLAUSE (Virginia Polytechnic Institute and State University), J. C. WADE (Virginia Polytechnic Institute and State University), and P. S. ZERWEKH (Virginia Polytechnic Institute and State University)
Jan. 1985

LAR-12965

Vol. 8, No. 3, P. 378

Embedded single-mode optical fibers sample internal-stress fields directly. Statically loaded composite matrix emits pulsed ultrasonic waves which mechanically modulate embedded fiber and phase-modulate transmitted optical field. Modulation detected by optical interferometry and Fourier optical processing converted to electronic signal proportional to acoustic field amplitude integrated along length of fiber embedded in specimen. Technique used for measurements of both high- and low-frequency CW acoustic fields as well as high-frequency transients.

B84-10113

MEASURING ABSOLUTE OXYGEN PRESSURE

R. RICHTER (CALTECH)

Jan. 1985

NPO-16131

Vol. 8, No. 3, P. 379

Sensor determines absolute pressure of oxygen without reference pressure source. Absolute oxygen pressure transducer with control circuit enables measurement without reference pressure. Transducer, two part device, combines solid electrolyte membranes sensor with diffusional orifice. Device adapted for direct control of oxygen pressure in combustion mixtures.

B84-10114

LOW-STRESS SEALING OF PRESSURE TRANSDUCERS

R. E. KROY (Rockwell International Corp.)

Jan. 1985

MFS-19877**Vol. 8, No. 3, P. 380**

Compliant washer seals high pressures without excessive compressive stress on transducer. Conformal washer serves as effective seal for transducer passing through walls of pressure vessel. Washer makes it unnecessary to tighten mounting nut to high torque, which could damage transducer or adversely affect accuracy. Washer also used to seal mountings for temperature sensors and other devices.

B84-10115**PREVENTING FIRES IN CRYOGENIC OXIDIZER LINES**

W. R. WAGNER (Rockwell International Corp.)

Jan. 1985

MFS-19830**Vol. 8, No. 3, P. 380**

Friction and compression induced ignition prevented by heat-dissipation layer. Thin layer of copper placed inside surfaces of pipes and other parts in contact with flowing liquid oxygen, fluorine, or other oxidizers. Copper layer of only 0.001 to 0.005 inch (0.0254 to 0.127 mm) ensures heat away from hotspots thereby discouraging ignition. Copper layer increases oxygen ignition threshold of pipe by 5 to 20 times.

B84-10116**MEASURING RIND THICKNESS ON POLYURETHANE FOAM**

C. JOHNSON (Martin Marietta Corp.), J. MILLER (Martin Marietta Corp.), and H. BROWN (Martin Marietta Corp.)

Jan. 1985

MFS-25941**Vol. 8, No. 3, P. 381**

Nondestructive test determines rind thickness of polyurethane foam. Surface hardness of foam measured by Shore durometer method: hardness on Shore D scale correlates well with rind thickness. Shore D hardness of 20, for example, indicates rind thickness of 0.04 inch (1 millimeter). New hardness test makes it easy to determine rind thickness of sample nondestructively and to adjust fabrication variables accordingly.

B84-10117**REDUCING THERMAL EXPANSIVITY OF COMPOSITE PANELS**

D. D. SMITH (Boeing Aerospace Co.)

Jan. 1985

MFS-25793**Vol. 8, No. 3, P. 382**

Coefficient of thermal expansion of laminated graphite/epoxy composite panels altered after panels cured by postcuring heat treatment. Postcure decreases coefficient of thermal expansion by increasing crosslinking between molecules. Treatment makes it possible to reprocess costly panels for requisite thermal expansivity instead of discarding them.

B84-10118**SINTERED LINING FOR HEAT-PIPE EVAPORATOR**

D. M. ERNST (Thermacore, Inc.) and G. Y. EASTMAN (Thermacore, Inc.)

Jan. 1985

NPO-16172**Vol. 8, No. 3, P. 382**

Hotspots eliminated by lining inner wall. Distribution of heat transfer liquid in heat-pipe evaporator improved by lining inner wall with layer of sintered metal. Sintered layer takes place of layer of screen wick formerly sintered or bonded to wall. Since sintered layer always full of liquid, no hotspot of type that previously arose where former screen wick did not fit properly against wall.

B84-10119**JOINT FOR ERECTABLE AND COLLAPSIBLE FRAMES**

T. E. PELISCHEK

Jan. 1985

MSC-20635**Vol. 8, No. 3, P. 383**

Joint mechanism allows truss structure to be folded and stowed in small space. Mechanism includes hinge attached to two truss elements connected by two links, tension bar, and compression bar. When folded elements

are released, springs in joint mechanism rotate truss elements about hinge and lock mechanism to form single member. Developed for structures erected in space (antennas, solar panels, solar sails, and masts), joint mechanism adaptable to window-opening struts, folding furniture and television antennas.

B84-10120**LIGHTNING PROTECTION FOR COMPOSITE AIRCRAFT STRUCTURES**

G. O. OLSON (The Boeing Co.)

Jan. 1985

LAR-12879**Vol. 8, No. 3, P. 384**

Lightning protection system consisting of two layers of aluminum foil separated by layer of dielectric material protects graphite/epoxy composite structures on aircraft. Protective layer is secondarily applied lightning protection system, prime advantage of which is nullification of thermal and right angle effect of lightning arc attachment to graphite/epoxy laminate.

B84-10121**EFFICIENT JOINTS FOR GRAPHITE/EPOXY STRUCTURES**

D. E. SKOUMAL (Boeing Aerospace Co.) and J. B. CUSHMAN (Boeing Aerospace Co.)

Jan. 1985 See Also NASA CR-3602 (N83-16787 NSP)

LAR-13091**Vol. 8, No. 3, P. 385**

Bonded joints perform well through wide temperature range. Tests indicate significant improvement in joint efficiencies available through geometric modifications and hybrid material additions at adherent interfaces. Material modifications consisted of placing S-glass polyimide fabric in joint between adherents. Most fabric interface specimens delaminated between two fabric plies as opposed to failing in base adherents.

B84-10122**ACQUISITION OF DYNAMIC STRESS/STRAIN DATA**

R. G. MINES (Rockwell International Corp.) and R. J. DEMONET (Rockwell International Corp.)

Jan. 1985

MSC-20589**Vol. 8, No. 3, P. 385**

Computer program enables real-time data acquisition and plotting of stress strain by small, desk top computer. Program monitors load cell and multiple-strain gages during tension or compression loading. Scan routine triggered by specified change of applied load or longitudinal strain.

B84-10123**DYNAMIC SIMULATION AND STABILITY ANALYSIS**

H. P. FRISCH and J. A. SANBORN

Jan. 1985

GSC-12810**Vol. 8, No. 3, P. 385**

Dynamic Interaction Simulation of Controls and Structure (DISCOS) program developed for dynamic simulation and stability analysis of passive and actively controlled spacecraft. In use of DISCOS, physical system undergoing analysis generally described as cluster of contiguous flexible structures (bodies) that comprise mechanical system, such as spacecraft.

B84-10124**AERODYNAMIC ANALYSIS OF LOW-SPEED WING-FLAP SYSTEMS**

H. W. CARLSON (Kentron International, Inc.) and K. B. WALKLEY (Kentron International, Inc.)

Jan. 1985

LAR-13116**Vol. 8, No. 3, P. 386**

SUBAERF program developed for aerodynamic analysis and design of lowspeed wing-flap systems. SUBAERF based on linearized theory lifting-surface solution. Low speed aerodynamic analysis method used in SUBAERF provides estimates of wing performance which include effects of attainable leading edge thrust and vortex lift.

B84-10125

TURBINE-ENGINE TRANSIENT-ROTOR ANALYSIS

V. GALLARDO JR. (General Electric Co.), M. STALLONE (General Electric Co.), A. STORACE (General Electric Co.), and G. BLACK (General Electric Co.)

Jan. 1985

LEW-13726

Vol. 8, No. 3, P. 386

Computer program developed to predict structural dynamics of rotor system in gas turbine engines subjected to sudden unbalance. TETRA computer code calculates transient structural response of turbine engines due to blade loss or other time-dependent events. Used on structures other than turbine engines with little or no modification.

B84-10126

HEAT-EXCHANGER COMPUTATIONAL PROCEDURE FOR TEMPERATURE-DEPENDENT FOULING

L. CHIAPPETTA (United Technologies Corp.) and E. SZETELA (United Technologies Corp.)

Jan. 1985

LEW-13874

Vol. 8, No. 3, P. 387

Computer program predicts heat-exchanger performance under variety of conditions. Program provides rapid means of calculating distribution of fluid and wall temperatures, fuel deposit formation, and pressure losses at various locations in heat exchanger. Developed for use with heat exchanger that vaporizes fuel prior to fuel ignition; other applications possible.

B84-10127

STRUCTURAL ANALYSIS OF CYLINDRICAL THRUST CHAMBERS

W. ARMSTRONG (Lockheed Missiles & Space Co., Inc.) and M. PEARSON (Lockheed Missiles & Space Co., Inc.)

Jan. 1985

LEW-13655

Vol. 8, No. 3, P. 387

System of three computer programs developed for use with BOPACE finite-element program for analyzing cumulative plastic deformation of structures subject to high thermomechanical load cycles.

B84-10128

TURBULENT RECIRCULATING FLOWS IN ISOTHERMAL COMBUSTOR GEOMETRIES

D. LILLEY (Oklahoma State University) and D. RHODE (Oklahoma State University)

Jan. 1985

LEW-13894

Vol. 8, No. 3, P. 387

Computer program developed that provides mathematical solution to design and construction of combustion chambers for jet engines. Improved results in areas of combustor flow fields accomplished by this computer-program solution, cheaper and quicker than experiments involving real systems for models.

B84-10129

COMPUTATION OF THREE-DIMENSIONAL COMBUSTOR PERFORMANCE

S. SRIVATSA (Garrett Turbine Engine Co.)

Jan. 1985

LEW-13930

Vol. 8, No. 3, P. 388

Existing steady-state 3-D computer program for calculating gasturbine flow fields modified to include computation of soot and nitrogen oxide emission. In addition, radiation calculation corrected for soot particles. These advanced tools offer potential of reducing design and development time required for gas-turbine combustors.

B84-10130

GENERATING TABLES OF THERMODYNAMIC PROPERTIES

S. N. NGUYEN (Rockwell International Corp.)

Jan. 1985

MSC-20701

Vol. 8, No. 3, P. 388

Thermodynamic Property Generation program produces tables for any fluid for which state equation, vapor pressure

equation, specific heat equation, and critical constants are known. Program calculates thermodynamic properties at any state providing way of obtaining properties at extreme environmental conditions.

B84-10131

TRAJECTORY ANALYSIS AND THE ORBIT DETERMINATION

D. J. ALDERSON (CALTECH), F. H. BRADY (CALTECH), P. J. BRECKHELMER (CALTECH), J. B. COLLIER (CALTECH), J. E. EKELUND (CALTECH), J. ELLIS (CALTECH), D. E. HILT (CALTECH), A. R. KHATIB (CALTECH), V. N. LEGERTON (CALTECH), S. K. MCMAHON (CALTECH) et al

Jan. 1985

NPO-15586

Vol. 8, No. 3, P. 388

Two programs aid in trajectory analysis. DPTRAJ, ODP and their supporting utility programs capable of handling massive amounts of data and performing numerical calculations required for solving navigation problems associated with planetary fly-by and lander missions. Used extensively in support of Voyager.

B84-10132

ORBITAL MECHANICS ANALYSIS PROGRAM

W. C. SIMON (Rockwell International Corp.), S. C. JAN-KOWSKI (Rockwell International Corp.), and T. B. HUGHES (Rockwell International Corp.)

Jan. 1985

MSC-20700

Vol. 8, No. 3, P. 389

Orbital Mechanics Analysis Program provides engineers with simple tool for analysis or synthesis of any orbital maneuvering function involving vehicle and target. Program useful in such applications as proximity operations and rendezvous maneuvers.

B84-10133

THERMAL RADIATION ANALYZER

R. A. VOGT, C. L. JENSEN (Martin Marietta Corp.), R. G. GOBLE (Martin Marietta Corp.), and R. J. CONNER (Martin Marietta Corp.)

Jan. 1985

MSC-20448

Vol. 8, No. 3, P. 389

Thermal Radiation Analyzer System TRASYS II solves radiation related aspects of thermal analysis problems. TRASYS II provides for calculation of internode radiation interchange data and for calculation of incident and absorbed heat rate data originating from environmental radiant heat sources. When TRASYS II used in conjunction with generalized thermal analysis program such as Systems Improved Numerical Differencing Analyzer (SINDA), any thermal problem expressed in terms of lumped parameter RC thermal network solved.

B84-10134

DATA-GENERATING PROGRAM FOR ASKA MODELING

A. KARIMI-DECHESH (Rockwell International Corp.) and T. K. CHENG (Rockwell International Corp.)

Jan. 1985

MSC-20644

Vol. 8, No. 3, P. 390

Carrier plate assemblies of NASA Space Shuttle thermal protection system provided for easy access to protected vital parts of Shuttle. Each assembly mounted on substructure with fasteners through holes in protective tiles. Automatic System of Kinematic Analysis (ASKA) finite-element program evaluates these assemblies. PLATEFORT computer program developed as data generator for ASKA modeling. PLATEFORT greatly reduces amount of time and data required for building ASKA model of these assemblies.

B84-10135

TRANSIENT RESPONSE ANALYSIS

L. D. BLACKMAN (Rockwell International Corp.)

Jan. 1985

MSC-20590

Vol. 8, No. 3, P. 390

Transient Response Analysis Program, TRAP aids in

analysis of frequency response of force-transmission and shock-damping devices. Devices analyzed with TRAP include hydraulic actuators, automotive shock absorbers and electromechanical actuators.

B84-10136

PREWHIRL JET MODEL

S. Y. MENG (Rockwell International Corp.), M. JENSEN (Rockwell International Corp.), and E. D. JACKSON
Jan. 1985

MFS-19826

Vol. 8, No. 3, P. 390

Simple accurate model of centrifugal or rocket engine pumps provides information necessary to design inducer backflow deflector, backflow eliminator and prewhirl jet in jet mixing zones. Jet design based on this model shows improvement in inducer suction performance and reduced cavitation damage.

B84-10137

MEASURING SIDE LOADS ON BOLTS

T. O. KILGROVE (CALTECH)

Jan. 1985

NPO-15705

Vol. 8, No. 3, P. 390

Side loads on clevis bolt measured quickly and easily. Such loads introduced during assembly of bolt and affect operation. Now, unwanted loads determined quantitatively and corrected.

B84-10138

EDDY-CURRENT REFERENCE STANDARD

H. H. AMBROSE JR. (Rockwell International Corp.)

Jan. 1985

MFS-19824

Vol. 8, No. 3, P. 391

Magnetic properties of metallic reference standards duplicated and stabilized for eddy-current coil measurements over long times. Concept uses precisely machined notched samples of known annealed materials as reference standards.

B84-10139

FLEXIBLE LIQUID-TRANSPORT TUBE

E. R. COLLINS JR. (CALTECH)

Jan. 1985

NPO-15761

Vol. 8, No. 3, P. 391

Flexible tube with zipper type arrangements of U-shaped side ribs and top plates allows liquids both transported and removed.

B84-10140

CONSERVING PURGE GASES

K. KAN (Rockwell International Corp.), L. BLEWETT (Rockwell International Corp.), and T. NELSON (Rockwell International Corp.)

Jan. 1985

MFS-19625

Vol. 8, No. 3, P. 391

Two-step flow control adjusts to dimensional changes in purged equipment. Two pressure actuated valves provide two-step control. When turbopump starts, helium flows through both valves. As pump operates its parts expand, clearance decrease and back pressure builds up on valves. At preset back pressure value, one valve closes, reducing helium flow.

B84-10141

SELECTING FLATPACK LEAD-FORMING DIES

E. L. CHOATE (Honeywell, Inc.)

Jan. 1985

MFS-25951

Vol. 8, No. 3, P. 391

Optical instrument accurately records unformed lead offset for each flatpack and provides better fit of flatpack to printed wiring board.

B84-10142

COILABLE-COLUMN DEVELOPMENT

P. R. PREISWERK (Astro Research Corp.), L. A. DINLEY (Astro Research Corp.), and K. KNAPP (Astro Research

Corp.)

Jan. 1985

MFS-27032

Vol. 8, No. 3, P. 391

Design changes for longeron columns allow fabrication of larger structures.

B84-10143

MAINTAINING CONSTANT LOAD CELL TEMPERATURE

G. D. VAN MARK (Beech Aircraft Corp.)

Jan. 1985

MSC-20333

Vol. 8, No. 3, P. 391

Thermal insulation and temperature compensation device maintains constant temperature environment for load cells. At constant temperature, cells measure weight accurately and reproducibly.

B84-10144

DETECTION OF GAS SLUGS IN HEAT PIPES

J. A. JONES (CALTECH)

Jan. 1985

NPO-16064

Vol. 8, No. 3, P. 391

Temperature sensing system detects presence of gas slugs in heat pipes. System designed for operation between zero and 70 degrees C and detects noncondensable pockets of gas that result from decomposition of ammonia cooling fluid. Slugs 1 in. (25mm) in length detected.

B84-10145

A POSITIVE-SHUTOFF FUEL VALVE

J. TOLPEN (Rockwell International Corp.)

Jan. 1985

MFS-19779

Vol. 8, No. 3, P. 392

Pneumatically actuated ball valve utilizes continuous contact ball seat seals and dynamic delta seals in lieu of bellows to seal against low pressure leaks in fuel supply lines.

B84-10323

X-RAY DETERMINATION OF WELD MISALINEMENT

C. W. NELSON (Beech Aircraft Corp.)

Apr. 1985

MSC-20418

Vol. 8, No. 4, P. 507

Simple technique uses ordinary X-ray equipment. Weld line between hemispheres of hidden spherical pressure vessel examined for misalignment between hemispheres. Central X-ray tangent to pressure vessel at weld line. Technique not limited to spheres. Also used to check alignment between insulated sections of pipelines or chemical-reaction vessels without removing insulation or interrupting flow or process.

B84-10324

INSULATION DEBOND DETECTION

G. D. JOHNSTON, A. D. COLEMAN, J. N. PORTWOOD, J. M. SAUNDERS, and A. J. PORTER

Apr. 1985

MFS-25862

Vol. 8, No. 4, P. 508

Load-cell and acoustic responses indicate bonding condition nondestructively. Signal recorded by load cell direct and instantaneous measure of local stiffness of material at point of impact. Separate and distinctly different measurement that sensed by microphone. Spectrum analysis of pulse obtained from debonded point will only show frequencies below 425 Hz because insulation alone does not have stiffness to support energy at higher frequencies.

B84-10325

DETERMINING THERMAL DIFFUSIVITIES OF RADIATING SPECIMENS

C. WOOD (CALTECH), R. A. LOCKWOOD (CALTECH), and K. SHIMADA (CALTECH)

Apr. 1985

NPO-15436; NPO-15441

Vol. 8, No. 4, P. 509

Two heat-pulse techniques eliminate uncertainties due to radiation losses. Flashlamp supplies pulse of heat to one side of specimen. Temperatures of illuminated surface

06 MECHANICS

and of opposite surface monitored photometrically. In second method, pulse of electrons supplies heat to one side of specimen. Temperature of opposite side monitored by photon detector. Techniques needed because radiation heat losses in this temperature range introduce uncertainties into conventional heat-flux measurements.

B84-10326
HIGH-PRESSURE COUPLING FOR OPEN-ENDED TUBES
A. N. ANDERSON (Rockwell International Corp.)
Apr. 1985

MSC-20451 Vol. 8, No. 4, P. 510
Temporary fitting easily installed and removed without damage to tubes. Tube-end pressure coupling consists of few parts easy to install and remove. Couplings useful mainly for repeated temporary connections necessary for high pressure testing or prestressing of tubes with finished ends.

B84-10327
BRAZING ALLOYS INDICATE TURBOMACHINERY TEMPERATURES

J. W. SCHLAFF (Rockwell International Corp.)
Apr. 1985
MFS-19792 Vol. 8, No. 4, P. 511

Foils serve as consumable thermometers. Stainless-steel tab with circular window holds brazing-foil sample in place. Tab tacked to object to be tested with capacitive-discharge spot welder operating in range $10 + 1$ joules. After measurements, tabs and samples chiseled off, leaving tested object fairly well intact. Technique used on objects made of alloys with iron, nickel, or cobalt as principal ingredients.

B84-10328
OVER-THE-WING PROPELLER REDUCES WING DRAG
J. L. JOHNSON JR. and R. WHITE (Kentron International, Inc.)
Apr. 1985

LAR-13134 Vol. 8, No. 4, P. 512
Airflow favorably altered if propeller placed above and behind wing. Relocating propeller induces flow over wing airfoil leading edge, which produces leading-edge suction forces not usually attainable by wing in free-stream flow. Concept reduced drag significantly on aircraft model in 12-foot (3.7-meter) wind tunnel. Relocation also helps to reduce cabin noise.

B84-10329
REUSABLE THERMAL BARRIER FOR INSULATION GAPS
C. E. SALADEE (Rockwell International Corp.)
Apr. 1985

MSC-20519 Vol. 8, No. 4, P. 512
Filler composed of resilient, heat-resistant materials. Thermal barrier nestles snugly in gap between two tiles with minimal protrusion beyond faces of surrounding tiles. When removed from gap, barrier springs back to nearly original shape. Developed for filling spaces between tiles on Space Shuttle, also used in furnaces and kilns.

B84-10330
DIFFERENTIAL PRESSURE HELPS SEAL BALL VALVE
J. K. MANGIALARDI (General Electric Co.)
Apr. 1985

MSC-20615 Vol. 8, No. 4, P. 513
Leakage suppressed despite O-ring wear. New design eliminates leakage in vacuum selector valve on Space Shuttle waste-control subsystem. Applied to improve sealing in laboratory and industrial vacuum systems and other plumbing involving switching among lines with pressure differentials of order of 1 atmosphere (0.1 MPa).

B84-10331
SPECIMEN HOLDER FOR ANALYTICAL ELECTRON MICROSCOPES
U. S. CLANTON, A. M. ISAACS (Lockheed), and I. MACKIN-

NON (Microbeam)

Apr. 1985
MSC-20398 Vol. 8, No. 4, P. 514

Reduces spectral contamination by spurious X-ray. Specimen holder made of compressed carbon, securely retains standard electron microscope grid (disk) 3 mm in diameter and absorbs backscattered electrons that otherwise generate spurious X-rays. Since holder inexpensive, dedicated to single specimen when numerous samples examined.

B84-10332
IMPROVED COULOMB-FRICTION DAMPER
G. E. CAMPBELL (Rockwell International Corp.)
Apr. 1985

MSC-20505 Vol. 8, No. 4, P. 515
Equal damping provided on forward and reverse strokes. Improved damper has springs and wedge rings symmetrically placed on both ends of piston wedge, so friction force same in both directions of travel. Unlike conventional automotive shock absorbers, they resemble on outside, both versions require no viscous liquid and operate over wide temperature range.

B84-10333
FUEL-CONSERVATIVE DESCENTS USING A PROGRAMMABLE CALCULATOR

C. E. KNOX
Apr. 1985 See Also TP-2085 (N83-17535/NSP)
LAR-13138 Vol. 8, No. 4, P. 515

Airborne descent algorithm used with or without time constraints. Concepts provide fuel savings by matching airplane arrival flow to airport acceptance rate through time control computations and allowing pilot to descend at his discretion from cruise altitude to designated metering fix in idle-thrust clean (landing gear up, flaps, zero, and speed brakes retracted) configuration. Also used for planning fuel-conservative descents when time is not consideration.

B84-10334
STING-MOUNTED FLOW SURVEY APPARATUS
G. C. ASHBY JR.

Apr. 1985
LAR-13157 Vol. 8, No. 4, P. 516

Flow survey instrumentation integral part of model support system. Drive motor, limit switches, and position transducer contained within streamlined housing and operable in near vacuum wing-tunnel environment. Sting-mounted system has advantages over conventional wall-mounted flow-field survey equipment, include more efficiently utilized run time, higher position accuracy, and fewer runs to map flow field.

B84-10335
DYNAMIC CALIBRATION OF PRESSURE TRANSDUCERS
R. W. HESS, W. T. DAVIS, and P. A. DAVIS

Apr. 1985 See Also NASA TM-85687 (N84-10538/NSP)
LAR-13094 Vol. 8, No. 4, P. 517

Sinusoidal calibration signal produced in 4- to 100-Hz range. Portable oscillating-pressure device measures dynamic characteristics of pressure transducers installed in models or aircraft at frequency and oscillating-pressure ranges encountered during unsteady-pressure-measurement tests. Calibration is over range of frequencies and amplitudes not available with commercial acoustic calibration devices.

B84-10336
ACOUSTO-OPTIC EXTENSOMETER FOR BOLTS

J. MARAM (Rockwell International Corp.) and G. KUHR (Rockwell International Corp.)

Apr. 1985
MFS-19914 Vol. 8, No. 4, P. 518

Bolt torque or tension deduced from non contacting measurements. Pulsed Laser induces shockwave in bolt head while continuous-wave acousto-optic detector monitors distortion produced by shock. Shock travel time measured

to determine bolt length. Solid-state position detector relatively inexpensive and keeps down cost of extensometer.

B84-10337
INTEGRATED EXHAUST-GAS-ANALYSIS SYSTEM
R. ANDERSON and R. SUMMERS

Apr. 1985 See Also NASA TM-81592 (N81-23435/NSP)

LEW-14062 Vol. 8, No. 4, P. 519

Gas-Analysis system includes eight commercial gas analyzers and data-processing and calibration electronics. Two microprocessors range analyzers, calibrate system, process raw data to units of concentration, and make all system information available to facility research computer and to operator. After initial setup, system operates several hours without significant operator attention. Saves considerable operator time.

B84-10338
MULTIPURPOSE PHOTONIC TRANSDUCERS

E. R. DU FRESNE (CALTECH) and W. L. DOWLER (CALTECH)

Apr. 1985

NPO-15135 Vol. 8, No. 4, P. 520

Features include smallness and noise immunity. Photonic transducer is interferometer with two arms. Small relative axial motions of mirrors detected as shifts in interference pattern. Version measures temperature changes via differential expansion or contraction of stalks. New transducers smaller (typical size less than 1 cm) and coupled to monitoring equipment with optical fibers instead of wires. Well suited to biomedical instrumentation.

B84-10339
DERIVING STRAIN MODES FROM VIBRATIONAL TESTS

J. W. YOUNG (Structural Dynamics Research Corp.) and J. C. JOANIDES (Rockwell International Corp.)

Apr. 1985

MSC-20587 Vol. 8, No. 4, P. 521

Measurements and theoretical analysis complement each other. Experimental acceleration and strain data used to calculate coefficients of low-frequency vibrational modes of object under test. An iterative comparison of experimental and calculated strains give modal model of improved accuracy that predicts strains under operating conditions. Method useful in fatigue life and reliability analyses of buildings, pumps, engines, vehicles, and other systems subject to vibrations and loud noises during operation.

B84-10340
ACTIVE PULSE SUPPRESSION OF STRUCTURAL VIBRATIONS

F. UDWADIA (CALTECH)

Apr. 1985

NPO-15788 Vol. 8, No. 4, P. 522

Corrective opposing vibrations reduce Earthquake damage. Algorithm for controlling reactions of buildings and other structures to Earthquake initiates counterpulses when incoming shock pulses exceed threshold level. By using 'go/no-go' criterion rather than continuously adjusting response to every input excitation no matter how small, control system needs less computation effort than comparable closed-loop systems.

B84-10341
CONSTANT-OPERATING-RESISTANCE HOT-WIRE PROBE

P. C. STAINBACK

Apr. 1985

LAR-13144 Vol. 8, No. 4, P. 523

Effects of lead-wire-resistance changes with temperature nullified. Constant-operating-resistance hot-wire probe uses two sets of leads. Exposed to identical conditions, comparison of resistance gives change in sensing element itself. Data taken in more convenient manner, with advantage of not having to constantly check for possible changes in lead resistance and consequently readjust potentiometer.

B84-10342
HOT-WIRE PROBE FOR COMPRESSIBLE SUBSONIC FLOW

P. C. STAINBACK, C. B. JOHNSON, and C. B. BASNETT (SDC)

Apr. 1985

LAR-13051 Vol. 8, No. 4, P. 524

Probe measures velocity, density, and total temperature fluctuations. Three-wire probe used with each wire operating at different overheat ratio. Technique extendable into transonic and low supersonic flow regimes without difficulty except for those problems usually associated with lengthy calibration and possible wire breaking.

B84-10343
MEASURING THE LIQUID CONTENT OF A GAS

D. H. BEEKMAN (Martin Marietta Corp.) and L. H. METHNER (Martin Marietta Corp.)

Apr. 1985

MFS-25990 Vol. 8, No. 4, P. 525

Instrument is adaptation of hot-wire anemometer. Hot-wire anemometer detects liquid droplets entrained in flowing gas. Droplets impinge on probe and carry away heat as vaporized. Power required to maintain probe at constant resistance and elevated temperature gives measure of amount of liquid present. Instrument used in steam turbines to check for condensation and detect fog at airports and highways, generating control signal to turn on fog lights.

B84-10344
CONTINUOUS-FILAMENT ISOGRID COMPOSITE PANEL

J. G. WILLIAMS, R. J. PALMER (McDonnell Douglas Corp.), and A. T. TUCCI (McDonnell Douglas Corp.)

Apr. 1985

LAR-12975 Vol. 8, No. 4, P. 527

Damaged panels do not fail catastrophically when fabricated this way. Isogrid stiffener formed in slotted silicon-rubber tool. At grid intersections, slots offset to prevent excessive buildup of composite material and widened to give room for overlapping filaments to spread when compressed. Following total failure of skin, isogrid stiffener still carries 350 kN/m (2,000 lb/in.) and remains intact.

B84-10345
THERMAL-BALANCE STRIP FOR FLUTED LFC PANELS

P. BONO (McDonnell Douglas Corp.)

Apr. 1985

LAR-12991 Vol. 8, No. 4, P. 527

Waviness of less than 0.004 inch achieved using titanium strips. Process uses titanium balancing strips to keep waviness within 0.004 inch limit. Balancing strips reduce thermal bonding stresses on lower fiberglass fluted sections and placed so fiberglass ends up sandwiched between porous titanium skin and titanium balance strip. Method requires less skill and less labor intensive than composite-wrapped-mandrel method.

B84-10346
SILICONE-RUBBER TOOLING FOR HOLLOW PANELS

F. H. GALLIMORE (McDonnell Douglas Corp.)

Apr. 1985

LAR-12974 Vol. 8, No. 4, P. 527

Wave-free contour surface obtained by using flexible mold. Silicone-rubber layup tool, when used in conjunction with hard plastic laminating mold defining desired contour, produces panel with wave-free surface that accurately reproduces shape of mold. In addition to providing porous hollow-panel wing structure that acts as duct for transporting sucked boundary layer tooling, also used to fabricate high-strength lightweight door panels and any single-or compound-contour panel.

B84-10347
QUICK-CHANGE HOLDER FOR AERONAUTICAL-RESEARCH MICROPHONES

06 MECHANICS

R. COHN

Apr. 1985

FRC-11072

Vol. 8, No. 4, P. 528

Mounting holds microphone flush with aircraft surface and maintains pressure seal. Microphones, which measure dynamic pressure and shock waves as they pass over aircraft fuselage or other experimental body, mounted through fuselage flush with outside surface. Besides being faster and easier to use than older mounts, new mount prevents damage to microphone on removal because no sealant to be cut and scraped away.

B84-10348

MICROPHONE DETECTS BOILER-TUBE LEAKS

S. P. PARTHASARATHY (CALTECH)

Apr. 1985

NPO-16027

Vol. 8, No. 4, P. 529

Unit simple, sensitive, rugged, and reliable. Diaphragm-less microphone detects leaks from small boiler tubes. Porous plug retains carbon granules in tube while allowing pressure changes to penetrate to granules. Has greater life expectancy than previous controllers and used in variety of hot corrosive atmospheres.

B84-10349

IN-PLACE CALIBRATION OF INSTRUMENTATION MICROPHONES

R. B. COHN (Dryden Flight Research Facility)

Apr. 1985

ARC-11463

Vol. 8, No. 4, P. 530

Accidental damage and decalibration prevented. Linearity, sensitivity, and frequency response of microphone measured with commercial sound generator modified so placed directly over or under microphone. Artificial voice connected to oscillator and measuring amplifier. Requisite frequencies and sound pressures applied to microphone, and microphone output recorded. New calibration method used on aircraft and wind-tunnel microphones.

B84-10350

SYNCHRONOUSLY DEPLOYABLE TRUSS

H. G. BUSH, M. K. MIKULAS JR., and R. E. WALLSOM (Kentron International, Inc.)

Apr. 1985

LAR-13117

Vol. 8, No. 4, P. 531

Double-layered truss structure compactly packaged and synchronously deployed. Synchronously deployable truss constructed of two surface layers of struts, arranged in triangles, connected by 'tripods' of equal-length core struts. Mechanism powered by passive spring and damped by hydraulic-damping cylinder. When released, spring drives slider linked to core and surface struts. Variety of truss geometries, including curved structures, contemplated.

B84-10351

DEPLOYABLE GEODESIC TRUSS

M. M. MIKULAS JR., M. D. RHODES, and J. W. SIMONTON

Apr. 1985

LAR-13113

Vol. 8, No. 4, P. 532

Efficiently packaged structure deployed or retracted easily. In preliminary two-bay model each bay has sets of battens connected by two longitudinal crossed members that give bay axial and torsional stiffness. Cross-members hinged in center to fold for packaging. Bays deployed and stabilized by actuators connected between center hinges of cross-members.

B84-10352

ADJUSTABLE MOUNT

E. A. CROSSLEY, H. C. JONES, D. P. HAYNES, and I. W. JONES

Apr. 1985

LAR-13100

Vol. 8, No. 4, P. 534

Remotely-controlled adjustable mount operates in vacuum environments. Mount consists of jacking-screw arrangement to control vertical direction. Gear-driven lead

screw controls other horizontal direction, while rack-and-pinion gears control azimuth and pitch. Adjustments made independently of each other.

B84-10353

GAS-DENSITY GAGE

W. BERNSTERIN (William Marsh Rice University) and J. MCGARITY (William Marsh Rice University)

Apr. 1985

MFS-28011

Vol. 8, No. 4, P. 534

Lightweight density gage that operates over broad pressure range accurately measures gas pressures.

B84-10354

CAPTURE-RANGE INDICATOR

C. HELLER

Apr. 1985

MFS-28008

Vol. 8, No. 4, P. 534

Position indicator allows rapid positioning and linkage of payloads. Device shortens capture time and provides less-stressful linkage on operator.

B84-10355

MEASURING CLEARANCE INDIRECTLY

W. C. JOHNSON (Rockwell International Corp.) and B. O. WESTBERG (Rockwell International Corp.)

Apr. 1985

MFS-19875

Vol. 8, No. 4, P. 534

Plot of deflection versus load indicates clearance between internal pins and wall.

07 MACHINERY

B84-10146

STEPPED-PIN CLEVIS RESISTS JAMMING

T. O. KILLGROVE (CALTECH)

Jan. 1985

NPO-15834

Vol. 8, No. 3, P. 395

Pin modification allows pyrotechnic release devices to operate more smoothly. New clevis pin has stepped diameters to prevent bending as it exits yoke. In contrast, conventional unstepped clevis pin bends and jams as it is withdrawn. Stepped pin design suitable for explosive and possible hammer driven pin pullers.

B84-10147

FORKLIFT SUPPORT DOLLY

W. YOUNG (A. & M. Machine Co.) and H. C. WITCHER

Jan. 1985

GSC-12916

Vol. 8, No. 3, P. 396

Long, heavy loads handled safely. Forklift support dolly enables operator to manipulate safely large sections of materials around corners and through narrow aisles and doorways. Dolly has pivoting tandem wheels for maneuverability. Plate laid out lengthwise along truck axis, with one end clamped to forklift and other end clamped to dolly. With this arrangement, minimum width of passage determined by short side of plate rather than by long side.

B84-10148

FASTER RESPONSE FOR MEMORY-METAL ACTUATORS

C. F. RUOFF (CALTECH)

Jan. 1985

NPO-16120

Vol. 8, No. 3, P. 396

Cooling accelerated by attaching Peltier junction. Electric current carries heat to or from junction between two dissimilar metals, direction of heat flow depending on direction of current and particular metals used. Direction of

current is opposite to that of same two metals operating as thermocouple.

**B84-10149
SEALING MECHANICAL CRYOGENIC COOLERS**
R. RICHTER (CALTECH)

Jan. 1985

NPO-15139

Vol. 8, No. 3, P. 397

Metal bellows used to seal Vuilleumier and Stirling-cycle cryogenic coolers, replacing sliding seals that failed after only 3,000 hours of service. Metal bellows, incorporated in displacer design provide nonrubbing dynamic seal. Lifetime of cryogenic cooler no longer limited by loss of sealing material and by deterioration of regenerators due to clogging by seal debris.

**B84-10150
VACUUM SEAL PERMITS LIMITED ROTATION**
F. LOMBARDI (CALTECH)

Jan. 1985

NPO-15115

Vol. 8, No. 3, P. 398

Flexible metal seal permits rotation of object in vacuum chamber. Seal made from two cylindrical azimuthally fluted bellows attached to ends of cylindrical axially fluted bellows with connecting tubes at both ends. Designed for rotation of sample probes in electron spectroscopy for chemical analysis (ESCA), other applications likely.

**B84-10151
AUTOMATIC COAL-MINING SYSTEM**
E. R. COLLINS JR. (CALTECH)

Jan. 1985

NPO-15861

Vol. 8, No. 3, P. 398

Coal cutting and removal done with minimal hazard to people. Automatic coal mine cutting, transport and roof-support movement all done by automatic machinery. Exposure of people to hazardous conditions reduced to inspection tours, maintenance, repair, and possibly entry mining.

**B84-10152
THE EFFECT OF WIND ON THE AERODYNAMIC RESISTANCE OF HIGHWAY VEHICLES**
B. DAYMAN JR. (CALTECH)

Jan. 1985

NPO-14771

Vol. 8, No. 3, P. 399

CARYAW predicts effects of wind on aerodynamic resistance of vehicles. Determines effect of winds on fuel consumption and determines effects of vehicle speed on fuel consumption for wide variety of wind conditions.

**B84-10153
STANDARD FASTENER LIBRARY**
J. J. TEJWANI (Rockwell International Corp.), T. R. KELLY (Rockwell International Corp.), and M. L. MARKE (Rockwell International Corp.)

Jan. 1985

MSC-20645

Vol. 8, No. 3, P. 400

Program for use with graphics system creates library of standard fastener hardware. Programs categorized by fastener geometric shape with tabulated sizes. Fastener details recalled by configuration and size for insertion into drawing on screen. Program used in production of engineering drawings for Space Shuttle orbiter.

**B84-10154
AERODYNAMIC DESIGN OF ROAD VEHICLES**
D. W. KURTZ (CALTECH)

Jan. 1985 See Also NASA CR-163744 (N81-12943/NSP)

NPO-15474

Vol. 8, No. 3, P. 400

Guidebook discusses design of road vehicles to reduce aerodynamic drag. Book presents strategy for integrating aerodynamic design into vehicle design. Book written for readers lacking experience in aerodynamics.

**B84-10155
INEXPENSIVE PRESSURE-RELIEF VALVE**

E. A. THEODORE (Rockwell International Corp.)

Jan. 1985

MSC-20518

Vol. 8, No. 3, P. 400

Simple device vents excess low-pressure gas. Inexpensive pressure relief valve built from polyvinylchloride pipe. Valve suitable for low pressure-- 25 to 50 cm of mercury-- and flow rates up to 14 m³/min.

**B84-10156
BOLT INSERTS FOR LIGHTNING PROTECTION**

K. O. HAMBROCK (Martin Marietta Corp.)

Jan. 1985

MFS-25918

Vol. 8, No. 3, P. 400

Stainless steel bolt fasteners have adequate grounding paths for protection of structures against lightning strikes. Fasteners particularly useful in sections where insulating material required, such as thermal panels of external storage tank.

**B84-10157
SOLAR-POWERED FLYWHEEL**

F. J. NOLA

Jan. 1985

MFS-25978

Vol. 8, No. 3, P. 400

Energy-storage system has 20 year lifetime. Electrical power source consisting of flywheel and electronic control system stores solar energy. Flywheel developed for space vehicles features good weight-to-energy storage ratios and used as control gyroscope for maneuvering.

**B84-10158
CLAMP SECURES MATERIAL TO CYLINDER BASE**

Y. S. TAM (Rockwell International Corp.)

Jan. 1985

MFS-19479

Vol. 8, No. 3, P. 400

Two-part clamp assembled around pipe or post, ends not free. Resistance welding clamp to post and locking ring to lower part of clamp permanently fixes clamp in place, preventing thermal cycling from loosening clamp.

**B84-10159
REMOTELY OPERATED GRIPPER TRACKS APPLIED FORCE**

G. C. BURNS (McDonnell Douglas Corp.)

Jan. 1985

MSC-20241

Vol. 8, No. 3, P. 401

Operator 'feel' incorporated into new design. Remotely controlled gripper grasps holds, and maneuvers items not equipped with grapple fixture and no preplanned interface with gripper.

**B84-10160
PILLAR-TRIMMING SYSTEM**
E. R. COLLINS JR. (CALTECH)

Jan. 1985

NPO-15848

Vol. 8, No. 3, P. 401

Trimming and reinforcing of coal pillars allows more coal recovery. Conceptual coal-pillar trimming machine use two counterrotating cutting drums to take corners off roof support pillars in coal mines.

**B84-10161
PERFORMANCE TESTING OF THE DOE ELECTRIC TEST VEHICLE**

D. W. KURTZ (CALTECH), J. A. BRYANT (CALTECH), and T. W. PRICE (CALTECH)

Jan. 1985

NPO-15660

Vol. 8, No. 3, P. 401

Report describes total system testing and evaluation of electrically powered automobile.

**B84-10162
INERT-GAS ELECTRICAL DISCHARGE MACHINING**

V. RAMANI (Rockwell International Corp.) and M. L.

07 MACHINERY

CASSIDENTI (Rockwell International Corp.)

Jan. 1985

MFS-19778

Vol. 8, No. 3, P. 401

Holes in complicated hardware successfully drilled by dry EDM process that uses tubular copper electrode and argon or helium gas as dielectric medium.

B84-10163

COUNTERSINK DRILL

R. J. HERNANDEZ (Rockwell International Corp.)

Jan. 1985

MFS-19852

Vol. 8, No. 3, P. 401

Efficient drill design for countersinking or metal drilling uses only two flutes instead of three and made of carbide instead of 'high-speed' steel. Tool performance and service life increased.

B84-10164

TWO-PHASE WET/DRY ENGINE FOR WASTE-HEAT RECOVERY

D. G. ELLIOTT (CALTECH)

Jan. 1985

NPO-15621

Vol. 8, No. 3, P. 401

Novel supersonic fluid expansion nozzle used to vaporize toluene (or other drying-type organic liquid) by expansion through two-phase region to drive impulse turbine in Rankine-cycle engine.

B84-10165

KICK-FREE PRESSURE RELEASE VALVE

T. O. KILLGROVE (CALTECH)

Jan. 1985

NPO-16078

Vol. 8, No. 3, P. 402

Release valve for smoothly venting buildup of gas pressure modified to reduce kickback of mechanism during discharge.

B84-10166

MAGNETIC DESPINNING SYSTEM

G. F. VON TIESENHAUSEN

Jan. 1985

MFS-25966

Vol. 8, No. 3, P. 402

Electrical coil reduces spinning and tumbling speed of orbiting satellites through eddy-current braking. Induction of eddy currents into skin of satellite by electromagnetic field produces torques that oppose rotation.

B84-10167

MEMORY-METAL STEPPING MOTOR

R. S. JAMIESON (CALTECH)

Jan. 1985

NPO-15482

Vol. 8, No. 3, P. 402

Compact stepping motor for applications requiring high torque at slow speeds made with helical spring clutch and electrically-heated memory-metal actuator.

B84-10168

DIVERTER LIP FOR SEAL

E. JACKSON III (Rockwell International Corp.) and D. JOHNSON (Rockwell International Corp.)

Jan. 1985

MFS-19891

Vol. 8, No. 3, P. 402

Proposed one-piece design change for cooling turbine rotor disks eliminates temperature differential that normally causes thermal stresses and cracks.

B84-10169

MEASURING THE RUNOUT ON A ROTARY SHAFT

R. BEATTY (Rockwell International Corp.) and J. FENWICK (Rockwell International Corp.)

Jan. 1985

MFS-19694

Vol. 8, No. 3, P. 402

Runout on shaft such as on pump shaft in liquid oxygen environment measured by device employing pair of pistons placed 90 degrees apart and in contact with shaft.

B84-10356

SAFETY PEDAL FOR FOOT-OPERATED MACHINERY

G. D. GARCIA (Rockwell International Corp.)

Apr. 1985

MSC-20535

Vol. 8, No. 4, P. 537

Ninged structure prevents inadvertent use. Forward motion of foot on yoke plate necessary to operate brake pedal. Downward force on yoke plate turns locking/releasing lever, which then pushes locking pin into indexing hole. New pedal improves both productivity and safety of power brakes and such other machines as metal shearers and punch presses.

B84-10357

BRIDLE ATTACHMENT FOR AIRCRAFT SPIN-RECOVERY PARACHUTE

W. L. WHITE

Apr. 1985

LAR-13076

Vol. 8, No. 4, P. 538

Antispin rolling moment produced by chute drag force. Parachute stowed prior to deployment. At deployment, bridle attachment produces antispin rolling moment. At recovery, parachute forces are in aircraft plane of symmetry. Attachment system reduces parachute diameter typically required for spin recovery of experimental aircraft during hazardous flight testing.

B84-10358

COMPACT ANTISPIN PARACHUTE SYSTEM

R. D. WHIPPLE

Apr. 1985

LAR-12979

Vol. 8, No. 4, P. 539

Costs and complexity of parachute system greatly reduced. Rigid towline parachute system operates in three steps: (1) When aircraft begins to spin, parachute compartment opened up, and parachute unfolds; (2) Parachute deployed and spin terminated; and (3) Parachute released. Advantage of towline system allows use of much smaller parachute, reducing design loads on structural reinforcement. Also, complex pyrotechnic-deployment or jettison systems no longer necessary.

B84-10359

GARTER VALVES

P. JENCEK (Rockwell International Corp.)

Apr. 1985

MFS-19899

Vol. 8, No. 4, P. 540

Small subvalves opened and closed simultaneously. Precisely-machined mating rings act as valves. Rings seal against each other to stop fluid flow. Rings deformed or moved relative to each other to uncover holes and permit flow. Valve controls flow rate of fuel into burner.

B84-10360

DEGREASER REDUCES SOLVENT LOSS

E. R. DU FRESNE (CALTECH)

Apr. 1985

NPO-16128

Vol. 8, No. 4, P. 541

Escape of solvent minimized by second cooling coil. Degreaser suppresses solvent-vapor loss through parts-basket dragout and air drafts. Within CO2 blanket, convection repeatedly exposes CO2/solvent mixture to cold spot created by CO2 coil. Solvent vapor condenses, then runs down via through to cold tank. This small expenditure of CO2 minimizes health and environmental hazards.

B84-10361

TAPERED RING SEAL

D. P. FLEMING

Apr. 1985 See Also NASA TP-1646 (N80-19495/NSP)

LEW-10455

Vol. 8, No. 4, P. 541

Centering force maximized by decreased seal clearance in flow direction. Increased centering force prevents contact between seal and shaft, eliminating seal wear. Ring seals used to restrict fluid leakage between rotating shaft and

nonrotating housing. Seal used in Space Shuttle main engine oxygen pump.

B84-10362

REACTIONLESS WINCH

B. E. BOSWELL (McDonnell Douglas Corp.)

Apr. 1985

MSC-20440

Vol. 8, No. 4, P. 542

Hand-held tool serves variety of uses. Housing of Winch includes simple controls and reaction handle that serves as stowage for ratcheting crank handle. Winch used by divers working underwater. Also used for pulling vehicles out of mud, lifting heavy objects, or tightening cables.

B84-10363

REMOTE COUPLING OF ELECTRICAL CONNECTORS

R. T. BARBOUR (Rockwell International Corp.)

Apr. 1985

MSC-20414

Vol. 8, No. 4, P. 543

Device aligns plug and receptacle axially and radially. Standard multiple-pin plug and socket mounted in mechanism. As threaded shaft moves out from its mounting bracket, two sets of petals engage each other and correct misalignment. Misalignment absorbed by spring-mounted swivels. Designed for umbilical cables between Space Shuttle and payload, mechanism adaptable to other remote or hazardous situations in which human not available to connect mating parts by hand.

B84-10364

TOOL FOR INSERTING AND REMOVING TUBE PLUGS

O. G. MOLINA (Rockwell International Corp.) and A. G. PASCUA (Rockwell International Corp.)

Apr. 1985

MFS-19871

Vol. 8, No. 4, P. 544

Simple handtool used with both straight and bent tubes. Plug consisting of two expandable O-rings pushed into or pulled out of tube with this flexible tool. Flexible shaft of tool threaded at inner (plug) end to engage or disengage plug when knurled handle turned. Results exceptionally low friction between shaft and tube. Allows insertion and removal of plug carefully controlled.

B84-10365

IGNITION-SPARK DETECTOR FOR ENGINE TESTING

G. KUHR (Rockwell International Corp.)

Apr. 1985

MFS-19890

Vol. 8, No. 4, P. 544

Optical fiber views sparks directly. In fuel or oxidizer tube, optical fiber collects light from ignition spark. Fibers also used to collect light from combustion reactions for spectrographic analysis. Useful in engine testing, detector helps determine reason for engine failure.

B84-10366

HINGED SHIELDS FOR MACHINE TOOLS

J. B. LALLANDE, W. W. POLAND, and S. TULL

Apr. 1985

GSC-12915

Vol. 8, No. 4, P. 545

Flaps guard against flying chips, but fold away for tool setup. Clear plastic shield in position to intercept flying chips from machine tool and retracted to give operator access to workpiece. Machine shops readily make such shields for own use.

B84-10367

HOLDING CARGO IN PLACE WITH FOAM

T. T. FISHER (Lockheed Missiles & Space Co., Inc.)

Apr. 1985

MSC-20723

Vol. 8, No. 4, P. 546

Foam fills entire container to protect cargo from shock and vibration. Originally developed for stowing space debris and spent satellites in Space Shuttle for return to Earth, encapsulation concept suitable for preparing shipments carried by truck, boat, or airplane. Equipment automatically injects polyurethane foam into its interior to hold cargo

securely in place. Container of rectangular or other cross section built to match shape of vehicle used.

B84-10368

AUTOMATIC ROBOT SAFETY SHUTDOWN SYSTEM

M. LIRETTE (Martin Marietta Corp.)

Apr. 1985

MFS-25969

Vol. 8, No. 4, P. 546

Robot turned off if acceleration exceeds preset value. Signals from accelerometer on robot arm pass through filter and amplifier, eliminating high-frequency noise and hydraulic pump pulsations. Data digitized and processed in computer. Unit controls other machines that perform repetitive movements, including rotary tables, tracked vehicles, conveyor lines, and elevators.

B84-10369

EDM ELECTRODE FOR INTERNAL GROOVES

V. RAMANI (Rockwell International Corp.) and A. WERNER (Rockwell International Corp.)

Apr. 1985

MFS-19733

Vol. 8, No. 4, P. 547

Electroerosive process inexpensive alternative to broaching. Hollow brass electrodes, soldered at one end to stainless-steel holding ring, held in grooves in mandrel. These electrodes used to machine grooves electrically in stainless-steel tube three-eighths inch (9.5 millimeters) in diameter. Tool used on tubes already in place in equipment.

B84-10370

SETUP AID FOR ELECTRICAL-DISCHARGE MACHINING

G. LINES (Rockwell International Corp.) and J. DUCA (Rockwell International Corp.)

Apr. 1985

MFS-19874

Vol. 8, No. 4, P. 548

Interlock assures that workpiece is correctly assembled in machining fixture. A Plunger in a Hollow Shaft actuates a switch, allowing a power supply to produce current for electrical-discharge machining. Plunger operates only when necessary parts are position.

B84-10371

PROPELLER DESIGN PROGRAM

W. H. PHILLIPS

Apr. 1985

LAR-13141; LAR-13142

Vol. 8, No. 4, P. 548

Planform and propeller twist with minimum induced loss calculated. New Theoretical treatment combines classical theories of Betz-Prandtl, Goldstein, and Glauert easily applied to problem of determining propeller blade geometry for minimum induced loss. Analysis applicable at subsonic flight speeds and neglects structural considerations in propeller design.

B84-10372

HYBRID-VEHICLE TRANSMISSION SYSTEM

G. LUPO (Centro Ricerche Fiat S.p.A.) and G. DOTTI (Centro Ricerche Fiat S.p.A.)

Apr. 1985

NPO-16119

Vol. 8, No. 4, P. 549

Continuously-variable transmission system for hybrid vehicles couples internal-combustion engine and electric motor section, either individually or in parallel, to power vehicle wheels during steering and braking.

B84-10373

EVENING FLOW DISTRIBUTION THROUGH PARALLEL TUBES

S. C. BRAY (General Electric Co.), P. W. DIETZ (General Electric Co.), and H. JASTER (General Electric Co.)

Apr. 1985

MFS-23936

Vol. 8, No. 4, P. 549

Flow nonuniformity in parallel tubes reduced by introducing pressure drops. Total flow maintained and controlled by varying main inlet valve position.

07 MACHINERY

B84-10374 LINEAR BOOM ACTUATOR E. F. KOCH (CALTECH)

Apr. 1985

NPO-16099

Vol. 8, No. 4, P. 550

Actuator stabilizes spacecraft spin by varying length of support struts that hold spacecraft booms. Variation changes spin axis and controls wobble. Linear actuator controls spacecraft wobble applicable in rotating systems on Earth.

B84-10375 SAFETY EVALUATION METHODOLOGY FOR MINING SYSTEMS W. F. ZIMMERMAN (CALTECH)

Apr. 1985

NPO-15831

Vol. 8, No. 4, P. 550

Methodology evaluates design of proposed mining systems. Analysis tests proposed mining systems against specifications and hazards of existing similar systems, examines soundness of new design in terms of reducing or eliminating major health and safety hazards, and identifies major design weaknesses.

B84-10376 HIGH-TEMPERATURE PUMP R. R. HALE (CALTECH) and A. R. MCDUGAL (CALTECH)

Apr. 1985

NPO-15783

Vol. 8, No. 4, P. 550

Heat exchanger in water-cooled pumps allows high-temperature operation.

B84-10377 POWER TRAIN FOR HYBRID ELECTRIC VEHICLE H. C. VIVIAN (CALTECH)

Apr. 1985

NPO-15742

Vol. 8, No. 4, P. 550

Power train of hybrid electric vehicle enables internal-combustion engine and electric motor to operate near same constant speed except when off or idling.

B84-10378 ADJUSTABLE TUNING SPRING FOR BELLOWS PUMP G. L. GREEN (Pan American World Airways, Inc.), D. TU DUC (Pan American World Airways, Inc.), and S. HOOPER (Pan American World Airways, Inc.)

Apr. 1985

MSC-20512

Vol. 8, No. 4, P. 550

Adjustable leaf spring increases maximum operating pressure of pump from 2 to over 60 psi (13 to over 400 kN/m²). Small commercial bellows pump using ac-powered electromagnet to vibrate bellows at mechanical resonance modified to operate over wider pressure range.

higher production speed, lower cost, and good control of crystal quality.

B84-10171 RECIPROCATING SAW FOR SILICON WAFERS

A. D. MORRISON (CALTECH) and E. R. COLLINS JR. (CALTECH)

Jan. 1985

NPO-15863

Vol. 8, No. 3, P. 406

Concept increases productivity and wafer quality. Cutting wafers from silicon ingots produces smooth wafers at high rates with reduced blade wear. Involves straight reciprocating saw blade and slight rotation of ingot between cutting strokes. Many parallel blades combined to cut many wafers simultaneously from ingot.

B84-10172 PRODUCTION LINE FOR DENDRITIC-WEB SOLAR CELLS

D. J. PAGE (Westinghouse Electric Corp.)

Jan. 1985

NPO-15098

Vol. 8, No. 3, P. 407

Direct inclusion of web-growth furnaces in production line expected to result in lower costs than current production processes using silicon wafers sliced from Czochralski boules. Silicon-web input capacity of line is 0.5 m²/min, which corresponds to total peak-power output of about 25 MW for 1 year of production. Line employs about 18 production people per shift and requires about 3,650 square feet of floorspace.

B84-10173 MACHINING OF SILICON-RIBBON-FORMING DIES

A. A. MENNA (Mobil Tyco Solar Energy Corp.)

Jan. 1985

NPO-15127

Vol. 8, No. 3, P. 408

Carbon extension for dies used in forming silicon ribbon crystals machined precisely with help of special tool. Die extension has edges beveled toward narrow flats at top, with slot precisely oriented and centered between flats and bevels. Cutting tool assembled from standard angle cutter and circular saw or saws. Angle cutters cuts bevels while slot saw cuts slot between them. In alternative version, custom-ground edges or additional circular saws also cut flats simultaneously.

B84-10174 AUTOMATICALLY DRESSING BLADES IN SILICON-WAFER CUTTING

A. D. MORRISON (CALTECH)

Jan. 1985

NPO-15745

Vol. 8, No. 3, P. 408

Inserts incorporated in support beams for silicon ingots automatically 'dress' cutting blade during wafer slicing. Segments of blade-dressing material placed at regular intervals in graphite beam. Blade cuts into segments and dressed without operator intervention and without interrupting regular machine operation. Manual dressing eliminated, and production rates increased.

B84-10175 HIGH-MOBILITY EPITAXIAL SILICON WAFERS

R. STERMER JR., A. FRIPP JR., A. JONES (Rockwell International Corp.), J. MCMULLEN (Rockwell International Corp.), H. MANASEVIT (Rockwell International Corp.), I. GERGIS (Rockwell International Corp.), and S. SOCLÖF (Rockwell International Corp.)

Jan. 1985

LAR-12846

Vol. 8, No. 3, P. 409

New technique produces high-mobility multilayer films suitable for use on silicon process line. New material is multilayer film of alternate layers of silicon and alloy of silicon and germanium. Films grown thus far have electron mobilities 50 percent greater than epitaxial silicon films grown previously.

08 FABRICATION TECHNOLOGY

B84-10170 TWO-CRUCIBLE CZOCHRALSKI PROCESS

G. FIEGL (Siltec Corp.) and W. TORBET (Siltec Corp.)

Jan. 1985

NPO-15110

Vol. 8, No. 3, P. 405

Scheme for continuous melt replenishment increases capacity of Czochralski crystal-growing furnace. Replenishing and drawing crucibles of improved Czochralski apparatus connected by heated quartz siphon. When doped silicon added to replenishing crucible, liquid silicon flows into drawing crucible, equalizing two melt levels. Addition of new material automatically controlled in response to optically sensed melt level. Results of this semicontinuous operation

B84-10176

RAPID ADHESIVE BONDING FOR METALS AND COMPOSITESB. A. STEIN, J. R. TYERYAR, R. L. FOX, S. E. STERLING JR., and J. D. BUCKLEY
Jan. 1985

LAR-13066

Vol. 8, No. 3, P. 410

Toroidal induction heater is key element in rapid bonding technique. Rapid adhesive bonding equipment features toroid induction heater for quick bonding of composites and metals. Process avoids damaging composites that cannot withstand high temperatures for long time intervals. Process scaled up for production. Technique suited to bonding of end tabs onto material test specimens.

B84-10177

COLLAPSIBLE AND DEPLOYABLE TRUSSES

R. A. NELSON (Vought Corp.)

Jan. 1985

MFS-25945

Vol. 8, No. 3, P. 411

Cable-controlled mechanisms allow large structures stored in small spaces. Combination of telescoping struts and pivot points allows very large structure collapsed into very small one. Concept used not only for straight but for tapered or curved ones as well. Structure adaptable to terrestrial uses as portable towers, scaffolds, and bridge beams folded compactly for transportation or storage.

B84-10178

HOT-DIPPED METAL FILMS AS EPITAXIAL SUBSTRATES

P. J. SHLICHTA (CALTECH)

Jan. 1985

NPO-15904

Vol. 8, No. 3, P. 412

Multistep process forms semiconductor devices on macrocrystalline films of cadmium or zinc. Solar-cell fabrication processes use hot-dipped macrocrystalline films on low-cost sheet-metal base as substrates for epitaxy. Epitaxial layers formed by variety of methods of alternative sequence paths. Solar cells made economically by forming desired surface substance directly on metal film by chemical reactions.

B84-10179

DECONTAMINATING ALUMINUM/AMMONIA HEAT PIPES

J. A. JONES (CALTECH)

Jan. 1985

NPO-16066

Vol. 8, No. 3, P. 413

Internal gas slugs reduced or eliminated. Manufacturing method increases efficiency of aluminum heat pipes in which ammonia is working fluid by insuring pipe filled with nearly pure charge of ammonia. In new process heat pipe initially closed with stainless-steel valve instead of weld so pipe put through several cycles of filling, purging, and accelerated aging.

B84-10180

POLYURETHANE MASKS LARGE AREAS IN ELECTROPLATING

J. L. BEASLEY (Rockwell International Corp.)

Jan. 1985

MFS-19825

Vol. 8, No. 3, P. 413

Polyurethane foam provides effective mask in electroplating of copper or nickel. Thin layer of Turco maskant painted on area to be masked. Layer ensures polyurethane foam removed easily after served its purpose. Component A, isocyanate, and component B, polyol, mixed together and brushed or sprayed on mask area. Mixture reacts, yielding polyurethane foam. Foam prevents deposition of nickel or copper on covered area. New method saves time, increases productivity and uses less material than older procedures.

B84-10181

VENTED COMPRESSION MOLDING OF GRANULE-FILLED RESINS

J. O. MCCREE (Martin Marietta Aerospace Corp.) and L. ERWIN (Martin Marietta Aerospace Corp.)

Feb. 1985

MFS-25975

Vol. 8, No. 3, P. 414

Resins filled with granules formed to final size and shape in new process. New vented compression molding method takes less time than conventional method. Vacuum-bagging and machining stages eliminated. Part emerges from mold in final size and shape. Suitable for making variety of parts with simple shapes, vented compression molding takes less time and cost less than older processes.

B84-10182

ALIGNING HEAT-EXCHANGER TUBES FOR ASSEMBLY

K. A. BENSON (Rockwell International Corp.)

Feb. 1985

MFS-19857

Vol. 8, No. 3, P. 415

Simple support method makes costly jigs and fixtures unnecessary. 'Dummy' tubes installed at regular intervals to support 'real' tubes before real tubes installed, filled with Cerrobend (or equivalent) material, metallic substance with low melting point, makes dummy tubes rigid so they brace real tubes as installed. When all available spaces for real tubes filled, dummy tubes removed and replaced with real tubes.

B84-10183

BEAM-CAP-FORMING MACHINE

W. MARX (Grumman Aerospace Corp.)

Feb. 1985 See Also CR-170642 (N83-11158/NSP)

MFS-27007

Vol. 8, No. 3, P. 415

Graphite reinforced plastic strip transformed into continuous beam cap. Report describes machine that fabricates beam caps from graphite reinforced thermoplastic materials supplied as strip stock.

B84-10184

MATCHING IMPEDANCES AND MODES IN ACOUSTIC LEVITATION

M. B. BARMATZ (CALTECH)

Feb. 1985

NPO-16022

Vol. 8, No. 3, P. 416

Temperature differences accommodated with tunable coupler. Report discusses schemes for coupling sound efficiently from cool outside atmosphere into hot acoustic levitation chamber. Theoretical studies have practical implications for material-processing systems that employ acoustic levitation.

B84-10185

ACOUSTIC LEVITATION WITH ONE DRIVER

T. G. WANG (CALTECH), I. RUDNICK (CALTECH), D. D. ELLEMAN (CALTECH), and J. D. STONEBURNER (CALTECH)

Feb. 1985

NPO-15793

Vol. 8, No. 3, P. 416

Report discusses acoustic levitation in rectangular chamber using one driver mounted at corner. Placement of driver at corner enables it to couple effectively to acoustic modes along all three axes. Use of single driver reduces cost, complexity and weight of levitation system below those of three driver system.

B84-10186

PRICE ESTIMATION GUIDELINES

R. G. CHAMBERLAIN (CALTECH), R. W. ASTER (CALTECH), P. J. FIRNETT (CALTECH), and M. A. MILLER (CALTECH)

Feb. 1985

NPO-15569

Vol. 8, No. 3, P. 417

Improved Price Estimation Guidelines, IPEG4, program provides comparatively simple, yet relatively accurate estimate of price of manufactured product. IPEG4 processes user supplied input data to determine estimate of price per unit of production. Input data include equipment cost, space required, labor cost, materials and supplies cost, utility

08 FABRICATION TECHNOLOGY

expenses, and production volume on industry wide or process wide basis.

B84-10187 ASSEMBLY-LINE MANUFACTURING INDUSTRY SIMULATION

R. G. CHAMBERLAIN (CALTECH) and P. J. FIRNETT (CALTECH)
Feb. 1985

NPO-16032 Vol. 8, No. 3, P. 417

Assists in economic analysis of production line manufacturing. Originally developed to estimate product price received by hypothetical U.S. industry that manufactures silicon solar modules for use in electricity generation, SAMIS extended and generalized to extent that it simulates operation of many different production line manufacturing industries and/or companies.

B84-10188 TWO-PULSE STITCH WELDING

C. J. TORBORG (Honeywell, Inc.)

Feb. 1985

MFS-25716 Vol. 8, No. 3, P. 418

Second welding pulse at about 20 percent higher energy repairs bad single-pulse welds. Method used successfully to weld polytetrafluoroethylene-insulated nickel wire to stainless-steel terminals in back-plane wiring.

B84-10189 SONICALLY-WELDED THERMAL BLANKETS

R. BETTINI (The Perkin-Elmer Corp.) and F. CITRIN (The Perkin-Elmer Corp.)

Feb. 1985

MFS-25806 Vol. 8, No. 3, P. 418

Insulating layers joined by seams. Sonic welding saves time and reduces weight. Layers of blanket built up from alternating layers of polyester sheet and polyester net. Paper pattern showing lines along which layers are joined together placed over top layer.

B84-10190 FABRICATION OF THICK GOLD STRIP LINES

C. M. GEE (Hughes Aircraft Co.), H. L. GARVIN (Hughes Aircraft Co.), and K. ROBINSON (Hughes Aircraft Co.)

Feb. 1985

NPO-16238 Vol. 8, No. 3, P. 418

Ion-beam etching and masking techniques fabricate micron-sized gold strip lines. Fabricated by use of argon ion-beam milling.

B84-10191 MAGNETIC CHUCK FOR PRECISE GRINDING

R. A. CARVER (Rockwell International Corp.)

Feb. 1985

MFS-19764 Vol. 8, No. 3, P. 418

Handling time substantially reduced. Magnetic grinding chuck used for fabricating parts that have thin, delicate geometries requiring close tolerances.

B84-10192 IMPROVED MELT-LEVEL CONTROL SYSTEM

D. L. MEIER (Westinghouse Electric Corp.)

Feb. 1985

NPO-15900 Vol. 8, No. 3, P. 418

Laser feedback control automatically maintains silicon melt levels. During long-term growth of dendritic-web silicon, silicon melt level controlled and held nearly constant using laser feedback system to sense level of melt and control silicon-pellet feed rate.

B84-10193 SILICON-WEB-GROWING MACHINE

C. DUNCAN (Westinghouse Electric Corp.)

Feb. 1985

NPO-15870 Vol. 8, No. 3, P. 418

Silicon replenished automatically as web is withdrawn.

Semiautomatic silicon-web-growing machine set down in detailed engineering drawings. Melt level sensed with He/Ne laser beam and melt-level error signal used to control motor-driven pellet feeder, speeding up when level is low. System reduces demand upon operator's time.

B84-10194 MINIMIZING CONVECTION DURING CRYSTAL GROWTH

P. J. SHLICHTA

Feb. 1985

NPO-15811 Vol. 8, No. 3, P. 419

Buoyant convection during crystal growth from solution minimized in experiment cell using boundary-layer stabilizing configurants such as downward isothermal growth or upward growth into thermal gradient.

B84-10195 AUTOMATED TEXTURIZATION OF SILICON WAFERS

S. CHITRE (Photowatt International, Inc.), C. SNYDER (Photowatt International, Inc.), G. JONES (Photowatt International, Inc.), and P. MARLOWE (Photowatt International, Inc.)

Feb. 1985

NPO-15816 Vol. 8, No. 3, P. 419

Two-stage texturization of either single-crystal or polycrystalline wafers improves conversion efficiency of finished solar cells.

B84-10196 RECIPROCATING CRYSTALLIZER

R. B. LAL (Alabama A & M University) and M. AGGARWAL (Alabama A & M University)

Feb. 1985

MFS-25948 Vol. 8, No. 3, P. 419

Automatic crystallizer grows crystals from aqueous solutions. Crystals grown from aqueous solutions by slow cooling of growth solution along with forced convection to increase mass transfer.

B84-10197 IMPURITY EFFECTS ON DENDRITIC GROWTH

M. E. GLICKSMAN (Rensselaer Polytechnic Institute)

Feb. 1985

MFS-25672 Vol. 8, No. 3, P. 419

Measurements of effects of soluble impurity addition on dendritic growth rates and morphology allow testing of theoretical dendritic growth models.

B84-10198 ACOUSTIC SORTER FOR SMALL PARTS

T. G. WANG (CALTECH) and E. W. LEUNG (CALTECH)

Feb. 1985

NPO-15913 Vol. 8, No. 3, P. 419

Sorting system uses acoustic resonance chamber, detects, and rejects anomalous parts on automated assembly line. System particularly suited to small nuts, bolts, pins, and assemblies which previously required expensive three dimensional television-monitoring systems to prevent misfeeds.

B84-10199 SQUARE-CUTTING GRINDER

G. B. DENNIS (Boeing Services International)

Feb. 1985

KSC-11257 Vol. 8, No. 3, P. 419

Attachment to grinder used to cut small pipe ends square and smooth, ready for welding. Attachment simple plate bracket fastened to air pencil grinder held against pipe flange to guide grinder.

B84-10200 HOLDER FOR STRAIGHTENING BENT TUBES

A. R. TURNER (Rockwell International Corp.) and E. D. POLZIEN (Rockwell International Corp.)

Feb. 1985

MFS-19705 Vol. 8, No. 3, P. 420

One-piece holder restrains bent metal tube against further bending during straightening operation. Holder consists of handle 16 in. (41 cm) long welded to short, strong tube that fits around tube to be straightened.

B84-10201

ANNULAR-TUBE REINFORCER

R. PESSIN (Rockwell International Corp.)

Feb. 1985

MFS-19738

Vol. 8, No. 3, P. 420

Cylindrical tool inserts support sleeves into annular space between coaxial tubes to provide local reinforcement. Tool particularly useful when space between outer ends of coaxial tubes is narrow, requiring thin sleeve.

B84-10379

OPTICAL-FIBER-WELDING MACHINE

W. C. GOSS (CALTECH), W. A. MANN (CALTECH), and R. GOLDSTEIN (CALTECH)

Apr. 1985

NPO-15004

Vol. 8, No. 4, P. 554

Technique yields joints with average transmissivity of 91.6 percent. Electric arc passed over butted fiber ends to melt them together. Maximum optical transmissivity of joint achieved with optimum choice of discharge current, translation speed, and axial compression of fibers. Practical welding machine enables delicate and tedious joining operation performed routinely.

B84-10380

ROOF POLISHING OF OPTICAL FIBERS

A. R. DHOLAKIA (RCA Corporation)

Apr. 1985

LAR-13070

Vol. 8, No. 4, P. 554

Beveled tip gives optimum coupling efficiency. Abrasive tape used to grind tip of optical fiber. Grinding force depends on stiffness of optical fiber. 'Roof' shape on end of optical glass fiber increases efficiency which couples laser light. End surface angle of 65 degrees with perpendicular required for optimum coupling. Since fiber and tape are light in weight and compliant, ridge defect-free, and chipping on fiber edge totally eliminated.

B84-10381

FABRICATING UNDERWATER ELECTROACOUSTIC TRANSDUCERS

R. L. FERGUSON and R. W. LOVELADY

Apr. 1985

LAR-13007

Vol. 8, No. 4, P. 555

Use of retainer ring instead of adhesives simplifies assembly and disassembly. Underwater electroacoustical transducer assembly uses precast silicone rubber compressed between ceramic crystal and metal container. Removable retainer ring holds assembly in place. Method provides proper stress loading, speed and ease of assembly, and way of removing transducer without damaging crystal.

B84-10382

PRESTRESSED THERMAL-PROTECTION PANELS

T. J. DUNN

Apr. 1985

MSC-20254

Vol. 8, No. 4, P. 556

Panels held securely with minimum of mounting hardware. Each panel held in place by single screw that pulls it into flat shape from its original shallow-dish shape. Shape and prestressing make panel stiff; resists vibration and withstands large mechanical loads. Panel shape and mounting arrangement not limited to thermal-protection systems but also used on aircraft, building walls, or wherever large surfaces must be covered with stiff, flat sheets easily removed for maintenance.

B84-10383

SORTING TITANIUM WELDING RODS

W. D. ROSS JR. (Rockwell International Corp.) and R. L. BROWN (Rockwell International Corp.)

Apr. 1985

MSC-20588

Vol. 8, No. 4, P. 557

Three types of titanium welding wires identified by their resistance to current flow. Welding-wire tester quickly identifies unknown titanium alloy wire by touching wire with test probe, and comparing meter response with standard response. Before touching wire, tip of test probe dipped into an electrolyte.

B84-10384

FLUORESCENT GAGE INDICATION

C. E. BARNS, B. L. GILBAUGH, B. GIN, W. L. HOLT, P. LESAK, R. MANCINI, and H. F. SPENCER

Apr. 1985

ARC-11397

Vol. 8, No. 4, P. 558

Transfer of dye shows quality of contact between two mating parts. Mating parts checked for fit by spreading fluorescent dye on one, making brief light contact with other, and looking (under UV light) for transferred dye. Dye offers greater visibility under ultraviolet illumination, allowing better indication of how precisely parts match and what areas interfere.

B84-10385

SOLAR-ARRAY SUBSTRATE FROM GLASS-REINFORCED CONCRETE

J. L. EIRLS (MB Associates)

Apr. 1985

NPO-15077

Vol. 8, No. 4, P. 558

Design eliminates glass superstrate and associated metal framing. Panel has two trapezoidal stiffening ribs for structural support. Strategic placement of ribs with embedded support tubes (standard PVC tubing) minimizes bending moments and resulting stresses produced by installation and windloads. Glass-reinforced concrete panel has smooth flat surface suitable for solar substrate and includes structural bracing for rigidity and design adaptable to mass production.

B84-10386

BONDING TECHNIQUE FOR STIFFENED-SKIN STRUCTURES

P. O. FRICKLAND (CALTECH), E. L. HEADRICK (CALTECH), and T. HASEGAWA (CALTECH)

Apr. 1985

NPO-15994

Vol. 8, No. 4, P. 559

Consistent bond thickness achieved even in large, complicated parts. Spring Clamp positions and holds parts assembled on tooling plate. Stiffener and backing bar held against adhesive layer by clamp. Spring action of clamp keeps steady force on pieces as they cure, insuring consistent bond thickness.

B84-10387

SOLDER BONDING FOR POWER TRANSISTORS

H. A. SNYTSHEUVEL (TRW, Inc.) and H. MANDEL (TRW, Inc.)

Apr. 1985

MSC-20570

Vol. 8, No. 4, P. 559

Indium solder boosts power rating and facilitates circuit changes. Efficient heat conduction from power transistor to heat sink provided by layer of indium solder. Low melting point of indium solder (141 degrees C) allows power transistor to be removed, if circuit must be reworked, without disturbing other components mounted with ordinary solder that melts at 181 degrees C. Solder allows devices operated at higher power levels than does conventional attachment by screws.

B84-10388

EDGE LABELS FOR MULTILAYER CIRCUIT BOARDS

P. J. ROSSI (Rockwell International Corp.)

Apr. 1985

MSC-20704

Vol. 8, No. 4, P. 560

Quick visual inspection identifies out-of-place layers. Small copper pads or other labels on layers present regular

08 FABRICATION TECHNOLOGY

pattern if multilayer circuit board properly assembled and irregular pattern if one or more layers in wrong place. New method faster, cheaper, and more reliable than earlier methods.

B84-10389

GLASS/EPOXY DOOR PANEL FOR AUTOMOBILES

J. L. BAUER JR. (CALTECH)

Apr. 1985

NPO-15057

Vol. 8, No. 4, P. 561

Lightweight panel cost-effective. Integrally-molded intrusion strap key feature of composite outer door panel. Strap replaces bulky and heavy steel intrusion beam of conventional door. Standard steel inner panel used for demonstration purposes. Door redesigned to exploit advantages of composite outer panel thinner. Outer panel for automobile door, made of glass/epoxy composite material, lighter than conventional steel door panel, meets same strength requirements, and less expensive.

B84-10390

STRIPPING THE SHEATH FROM STRANDED CABLES

A. L. PRISK (CALTECH) and J. W. ROTTA (CALTECH)

Apr. 1985

NPO-15082

Vol. 8, No. 4, P. 561

Device similar to tubing cutter removes tough plastic cover. Insulation stripper is 3 in. (7.6 cm) long and 1.5 (3.8 cm) in diameter. Two rollers are small-diameter bearings. Cutter blade journaled for rotation between pair of similar bearings. Bearings either pin or ball types of suitable dimensions.

B84-10391

GRAVITATIONAL EFFECTS ON CRYSTAL GROWTH BY VAPOR TRANSPORT

J. A. ZOUTENDYK (CALTECH) and W. M. AKUTAGAWA (CALTECH)

Apr. 1985

NPO-15853

Vol. 8, No. 4, P. 562

Crystal-growth apparatus makes it possible to measure growth rates in three directions: up, down, and horizontal. Sealed in quartz ampoule, charge of source material vaporizes and condenses in crystalline state at colder end of tube. Apparatus allows effect of gravity on crystal growth determined quantitatively.

B84-10392

MAKING CUBIC SILICON CARBIDE SEMICONDUCTORS

J. POWELL, H. WILL, and S. NISHINO (Kyoto University)

Apr. 1985

LEW-14018

Vol. 8, No. 4, P. 563

Thin buffer layer of SiC minimizes effects of lattice mismatch. Approach consists of growing single-crystal layer of cubic SiC on single-crystal silicon (Si) wafer by chemical-vapor deposition (CVD). Process developed for production of large-area single-crystal wafers of cubic silicon carbide (SiC) for semiconductor devices; also used to make devices themselves. Applications include electronics for high temperature (up to 900 C) and electronics for very high frequencies.

B84-10393

GAS ATMOSPHERES IMPROVE SILICON-RIBBON QUALITY

F. V. WALD (Mobil Tyco Solar Energy Corp.) and J. P. KALEJS (Mobil Tyco Solar Energy Corp.)

Apr. 1985

NPO-15129

Vol. 8, No. 4, P. 564

Growing crystal surrounded by gas containing carbon or oxygen. Ribbon of solid silicon, edgewise, grows from pool of molten silicon in die. Gases flowing through orifice ensure longer diffusion length and less contamination by carbide particles in product.

B84-10394

CONTOURED ORIFICE FOR SILICON-RIBBON DIE

B. H. MACKINTOSH (Mobil Tyco Solar Energy Corp.)

Apr. 1985

NPO-15126

Vol. 8, No. 4, P. 565

Die configuration encourages purity and stable growth. Contour of die orifice changes near ribbon edges. As result, silicon ribbon has nearly constant width and little carbon contamination. Die part of furnace being developed to produce high-quality, low-cost material for solar cells.

B84-10395

TOP-COATING SILICON ONTO CERAMIC

J. D. HEAPS (Honeywell, Inc.), L. D. NELSON (Honeywell, Inc.), and J. D. ZOOK (Honeywell, Inc.)

Apr. 1985

NPO-15125

Vol. 8, No. 4, P. 565

Polycrystalline silicon for solar cells produced at low cost. Molten silicon poured from quartz trough onto moving carbon-coated ceramic substrate. Doctor blade spreads liquid silicon evenly over substrate. Molten material solidifies to form sheet of polycrystalline silicon having photovoltaic conversion efficiency greater than 10 percent. Method produces 100-um-thick silicon coatings at speed 0.15 centimeter per second.

B84-10396

BONDING HEAT-RESISTANT FABRIC TO TILE

J. W. HOLT (Rockwell International Corp.) and L. W. SMISER (Rockwell International Corp.)

Apr. 1985

MSC-20540

Vol. 8, No. 4, P. 566

Acid etching, densification, and silica cement ensure strong bond. Key step in preparation for bonding to glazed tile is etching quartz fabric and tile with acid. This increases adhesion of silica cement used to form bond. Procedures use high-temperature materials exclusively and therefore suitable for securing flexible seals and heat barriers around doors and viewing ports in furnaces and kilns.

B84-10397

EXPLOSIVE WELDING FOR REMOTE APPLICATIONS

L. J. BEMENT

Apr. 1985

LAR-13119

Vol. 8, No. 4, P. 567

Explosive seam welding produces up to 100-percent joint strength. Ribbon explosive activated by remote energy source produces metallurgically sound joint. Success of technique verified for joints between like metals and joints between two different metals. Applications include structural assembly in toxic atmospheres and in radioactive or otherwise hazardous environments.

B84-10398

WELDING MANY THIN METAL LAYERS

B. O. HARTWELL (Ametek), P. CARAS (Ametek), and P. H. HOBBS (Ametek)

Apr. 1985

MSC-20698

Vol. 8, No. 4, P. 568

Electron-beam welding yields reliable, leakproof joints. Welding bands (also called 'doublers') sandwiched between layers welded to increase final weld-section thickness. New technique ensures repeatable leakproof assemblies.

B84-10399

STRONG, LIGHTWEIGHT CURVED PANELS

R. MOLHO (McDonnell Douglas Corp.) and H. L. BESTOR (McDonnell Douglas Corp.)

Apr. 1985

MSC-16278

Vol. 8, No. 4, P. 569

Sandwich construction gives panels structural efficiency. Large panels with compound curvatures are formed from a honeycomb core faced with sheets of graphite/epoxy cloth and tape. Developed for pod on Space Shuttle, construction readily adapted to curved skin panels on cars, trucks, and airplanes.

B84-10400

TAPE-MOUNTED THERMOCOUPLE

K. S. MACDAVID (CALTECH)

Apr. 1985

NPO-16291

Vol. 8, No. 4, P. 569

Thermocouple junctions soldered to copper-foil adhesives allow easy assembly.

B84-10401

CONNECTOR-ARRAY ATTACHMENT MATRIX

T. J. MALONEY (AIA Research Corp.)

Apr. 1985

NPO-15778

Vol. 8, No. 4, P. 569

Factory-assembled electrical/mechanical connectors on flexible sheets improve installation efficiency.

B84-10402

SNAPRING QUICK FASTENER

A. H. WILSON (CALTECH)

Apr. 1985

NPO-15724

Vol. 8, No. 4, P. 569

Snapring fastener allows quick attachment and detachment of solar panels. Springy structure bent to fit any recess, making solar-panel removal or repair extremely simple.

B84-10403

SPlicing EFFICIENTLY COUPLES OPTICAL FIBERS

G. F. LUTES (CALTECH)

Apr. 1985

NPO-16294

Vol. 8, No. 4, P. 569

Method of splicing single-mode optical fibers results in very low transmission losses through joined fiber ends. Coupling losses between joined optical-fiber ends only 0.1 dB. Method needs no special operator training.

B84-10404

AUTOMATED SOLAR-PANEL FABRICATOR

J. J. HAGERTY (MB Associates)

Apr. 1985

NPO-16205

Vol. 8, No. 4, P. 569

Automated computer-controlled system based on standard commercial industrial robot takes solar cells and other raw materials and assembles them into completed solar panels.

B84-10405

CLOSE-OUT PLUGS

T. ADAMS (Rockwell International Corp.)

Apr. 1985

MFS-19370

Vol. 8, No. 4, P. 570

Externally-applied circular plug seals holes in walls up to 0.44 (12 mm) in diameter.

B84-10406

ACOUSTIC LEVITATION SYSTEM

P. M. GAMMELL (CALTECH), T. G. WANG (CALTECH), A. CROONQUIST (CALTECH), and M. C. LEE (CALTECH)

Apr. 1985

NPO-16146

Vol. 8, No. 4, P. 570

Dense materials, such as steel balls, continuously levitated with energy provided by efficient high-powered siren in combination with shaped reflector. Reflector system, consisting of curved top reflector and flat lower reflector, eliminates instability in spatial positioning of sample.

B84-10407

ACOUSTIC POSITION SERVOSYSTEM

E. W. LEUNG (CALTECH), C. P. LEE (CALTECH), and T. G. WANG (CALTECH)

Apr. 1985

NPO-15936

Vol. 8, No. 4, P. 570

Servosystem automatically centers levitated objects within given volume.

B84-10408

HEAT-SHIELD GAP FILLER

D. B. LEISER, D. A. STEWART, M. SMITH, C. ESTRELLA, and H. E. GOLDSTEIN

Apr. 1985

ARC-11310

Vol. 8, No. 4, P. 570

Ceramic cloth strips provide flexible, easily replaceable insulating filler. Filler prevents hot gas from flowing between heat-shield tiles while allowing space for thermal expansion and contraction. Strips easily replaced when necessary.

09

MATHEMATICS AND
INFORMATION SCIENCES

B84-10202

CALCULATING CLOSED-LOOP SENSITIVITY TO PARAMETER VARIATIONS

D. B. SCHAECHTER (CALTECH)

Feb. 1985

NPO-15941

Vol. 8, No. 3, P. 423

Performance sensitivity calculated by back substitution. Original Lyapunov equation differentiated two times with respect to parameter p. Each differential turns out to yield Lyapunov equation for first and second derivatives with respect to parameter p of steady-state covariance of state variables. Derivatives desired closed-loop performance sensitivities.

B84-10203

TECHNI-KITS AND TECHNI-KIT BUILDING SYSTEMS

E. D. CALLENDER (CALTECH), C. HARTSOUGH (CALTECH), R. V. MORRIS (CALTECH), and Y. YAMAMOTO (CALTECH)

Feb. 1985

NPO-15956

Vol. 8, No. 3, P. 423

Techni-kits consists of theories, methods, standards and computer based tools that assist in design of information-intensive systems. Techni-kit 'building system' is techni-kit that builds techni-kits.

B84-10204

FAST TWO-DIMENSIONAL DIGITAL-FILTER HARDWARE

T. R. EDWARDS

Feb. 1985

MFS-25876

Vol. 8, No. 3, P. 424

Report describes principles of hardware implementation of two-dimensional 5 by 5 convolute-integer low pass filter. Filter processes image data points fast enough for real-time use in image analysis and enhancement.

B84-10205

DESIGN PRIMER FOR REED-SOLOMON ENCODERS

M. PERLMAN (CALTECH) and J. J. LEE (CALTECH)

Feb. 1985 See Also NASA CR-16974 (N83-17141/NSP)

NPO-15568

Vol. 8, No. 3, P. 424

Design and operation of Reed-Solomon (RS) encoders discussed in document prepared as instruction manual for computer designers and others in dataprocessing field. Conventional and Berlekamp architectures compared. Engineers who equip computer memory chips with burst-error and dropout detection and correction find report especially useful.

B84-10206

RESEARCH-CONCEPT EVALUATION

M. J. WHITE (ARINC Research Corp.) and W. KOLB (ARINC Research Corp.)

Feb. 1985

LAR-13143

Vol. 8, No. 3, P. 425

Concepts ranked according to potential benefit/cost ratios. ARINC Research Concept Evaluation Methodology (ARCEM) program provides powerful tool for organization and planning of research activities indicating which con-

09 MATHEMATICS AND INFORMATION SCIENCES

cepts provide greatest benefit for investment and determines number of concepts implemented to justify expenditures for development of generic technologies.

B84-10207

RELATIONAL INFORMATION MANAGEMENT DATA-BASE SYSTEM

O. O. STORAASLI, W. J. ERICKSON (Boeing Commercial Airplane Co.), F. P. GRAY (Boeing Commercial Airplane Co.), D. L. COMFORT (Boeing Commercial Airplane Co.), S. O. WAHLSTROM (Boeing Commercial Airplane Co.), and G. VON LIMBACH (Boeing Computer Services Co.)
Feb. 1985

LAR-12943; LAR-12944; LAR-12945 Vol. 8, No. 3, P. 425

DBMS with several features particularly useful to scientists and engineers. RIM5 interfaced with any application program written in language capable of Calling FORTRAN routines. Applications include data management for Space Shuttle Columbia tiles, aircraft flight tests, high-pressure piping, atmospheric chemistry, census, university registration, CAD/CAM Geometry, and civil-engineering dam construction.

B84-10208

SDDL: SOFTWARE DESIGN DOCUMENTATION LANGUAGE

H. KLEINE (CALTECH), D. E. CALLENDER (CALTECH), and T. M. ZEPKO (CALTECH)
Feb. 1985

NPO-16201; NPO-16202 Vol. 8, No. 3, P. 426

Promotes effective communications between software designer and user. SDDL successful on tasks ranging from small, one-person informal projects to large projects of hundreds of formally published pages of design.

B84-10209

SOFTWARE COST-ESTIMATION MODEL

R. C. TAUSWORTHE (CALTECH)

Feb. 1985

NPO-15862

Vol. 8, No. 3, P. 426

Software Cost Estimation Model SOFTCOST provides automated resource and schedule model for software development. Combines several cost models found in open literature into one comprehensive set of algorithms. Compensates for nearly fifty implementation factors relative to size of task, inherited baseline, organizational and system environment and difficulty of task.

B84-10210

SOFTWARE DESIGN ANALYZER SYSTEM

R. C. TAUSWORTHE (CALTECH)

Feb. 1985

NPO-16234

Vol. 8, No. 3, P. 426

CRISP80 software design analyzer system a set of programs that supports top-down, hierarchic, modular structured design, and programing methodologies. CRISP80 allows for expression of design as picture of program.

B84-10211

INTEGRATED PROCUREMENT MANAGEMENT SYSTEM, VERSION II

L. J. COLLIER (Computer Science Corp.)

Feb. 1985

MSC-20278

Vol. 8, No. 3, P. 427

Integrated Procurement Management System, Version II (IPMS II) is online/ batch system for collecting developing, managing and disseminating procurementrelated data at NASA Johnson Space Center. Portions of IPMS II adaptable to other procurement situations.

B84-10212

LANGUAGE FOR ALLOCATION AND NETWORK SCHEDULING

J. K. WILLOUGHBY (Science Applications, Inc.)

Feb. 1985

MSC-20633

Vol. 8, No. 3, P. 427

Programing Language for Allocation and Network Scheduling, Plans, handles many scheduling requirements of Space Shuttle program. Also generalized, high-level tree manipulation language.

B84-10213

A VISUALLY ORIENTED TEXT EDITOR

J. E. GOMEZ (CALTECH)

Feb. 1985

NPO-15088

Vol. 8, No. 3, P. 427

HERMAN employs Evans & Sutherland Picture System 2 to provide screenoriented editing capability for DEC PDP-11 series computer. Text altered by visual indication of characters changed. Group of HERMAN commands provides for higher level operations. HERMAN provides special features for editing FORTRAN source programs.

B84-10214

STRUCTURED FORTRAN PREPROCESSOR

J. A. FLYNN (CALTECH), C. L. LAWSON (CALTECH), W. VAN SNYDER (CALTECH), and H. N. TSITSIVAS (CALTECH)

Feb. 1985

NPO-15726

Vol. 8, No. 3, P. 428

SFTRAN3 supports structured programing in FORTRAN environment. Language intended particularly to support two aspects of structured programing -nestable single-entry control structures and modularization and top-down organization of code. Code designed and written using these SFTRAN3 facilities have fewer initial errors, easier to understand and less expensive to maintain and modify.

B84-10215

NASTRAN NASTPLT PLOTTING POST PROCESSOR

R. STRANG (Computer Sciences Corp.)

Feb. 1985

GSC-12833

Vol. 8, No. 3, P. 428

NASTRAN NASTPLT Plotting Post Processor reads NASTRAN-generated NASTPLT plot files, checks file contents for validity and translates NASTPLT plot commands into appropriate calls to plotting routines for either CALCOMP Tektronix PLOT10, or Versatec plotting systems.

B84-10216

ALGORITHM SOLVES CONSTRAINED AND UNCONSTRAINED OPTIMIZATION PROBLEMS

M. A. DENSON (McDonnell Douglas Corp.)

Feb. 1985

MSC-20683

Vol. 8, No. 3, P. 428

Is quasi-Newton iteration utilizing Broyden/Fletcher/Goldfarb/Shanno update on inverse Hessian matrix. Capable of solving constrained optimization unconstrained optimization and constraints only problems with one to five independent variables from one to five constraint functions and one dependent function optimized.

B84-10217

HANDLING SOFTWARE REQUESTS FOR COMMANDS

W. KING JR. (IBM Corp.)

Feb. 1985

KSC-11226

Vol. 8, No. 3, P. 429

Software component created expressly to provide interface between dedicated command buffer and components requesting command issuance. Component resolves problems that arise when software processes command requests from other subsystems and several requests received at approximately same time.

B84-10218

PRIORITY-BASED DISPATCHING ALGORITHM

G. OUZTS (IBM Corp.)

Feb. 1985

KSC-11277

Vol. 8, No. 3, P. 429

Tasks assigned to different queues based on priority. Proposed algorithm controls execution of transient tasks of different priorities in real-time computation.

B84-10219**MORE EFFICIENT STRUCTURAL DESIGN BY OPTIMALITY CRITERIA**

R. LEVY (CALTECH)

Feb. 1985

NPO-15832; NPO-15993**Vol. 8, No. 3, P. 429**

Computer algorithm aids in selection of active constraints on structural design via optimality-criterion method-highly useful way of ensuring lightweight, low-cost structures.

B84-10220**ADDING STALE-DATA FLAG TO AND ERROR-CORRECTING CODE**

N. BELL SR. (IBM Corp.), J. BURKAVAGE (IBM Corp.), and J. WICKS (IBM Corp.)

Feb. 1985

KSC-11134**Vol. 8, No. 3, P. 429**

A suitable constant 'exclusive-Or'd' with ECC to flag data without impairing detection of correctable errors.

B84-10221**ROOT-LOCUS ALGORITHMS**

E. R. WECHSLER (CALTECH)

Feb. 1985

NPO-16154**Vol. 8, No. 3, P. 430**

Two algorithms for use on programmable pocket calculators allow plotting of individual points on root-locus diagram with or without time delay.

B84-10222**ALGORITHMS FOR FINITE-ELEMENT EQUATIONS**

M. A. SALAMA (CALTECH), R. MELOSH (Duke University), and S. UTKU (Duke University)

Feb. 1985

NPO-16029**Vol. 8, No. 3, P. 430**

Five direct and five iterative algorithms for finite element equations in linear equilibrium problems investigated for number of parallel computer architectures and their basic computation methods compared.

B84-10223**SOFTWARE-IMPLEMENTATION PLAN**

G. JACOBSON (CALTECH) and A. SPINAK (CALTECH)

Feb. 1985

NPO-16123**Vol. 8, No. 3, P. 430**

Top-down implementation plan provides a methodology for solving problems in or aiding software engineering design.

B84-10224**TEST SEQUENCES FOR REED-SOLOMON ENCODERS**

J. J. LEE (CALTECH)

Feb. 1985

NPO-15542**Vol. 8, No. 3, P. 430**

Theory of Reed-Solomon codes yields sequences of input test symbols. Two specific sequences worked out for codes of 8 bits per symbol with 223 information symbols and 32 parity check symbols per code words. Test patterns also used for decoders.

B84-10409**FLIGHT-STABILITY EXTREMES CALCULATED FROM THE UNCERTAINTY ELLIPSE**

D. F. DOMINIK (Rockwell International Corp.)

Apr. 1985

MSC-20308**Vol. 8, No. 4, P. 573**

Tangents and normals to ellipse derived for situations with two correlated aerodynamic force or moment variables having normally (Gaussian) distributed uncertainty. Although transformations and vector calculations tedious when done by hand, equations in closed form and give rapid results when performed by computers or programmable desk calculators. Probability extremes of ratios and magnitude obtained directly, without repeated table lookup or other complication.

B84-10410**PREDICTING THE RELIABILITY OF SOLAR-CELL INTERCONNECTIONS**

G. R. MON (CALTECH), D. M. MOORE (CALTECH), and R. G. ROSS JR. (CALTECH)

Apr. 1985

NPO-15976**Vol. 8, No. 4, P. 574**

The reduction of life expectancy by thermal cycling calculated during design. Connections between solar cells critical parts of solarcell arrays generating electric power. Reliability affects life expectancy of modules, panels, and arrays. Used to predict stress-cycle lifetimes of such structures as arches, walkways, cylindrical ribbing of aircraft fuselages and submarine hulls, and pipeline expansion loops. Testing costs reduced by about 90 percent.

B84-10411**PREDICTING SEVERE DUSTSTORMS**

P. M. WOICHESHYN (CALTECH)

Apr. 1985

NPO-14999**Vol. 8, No. 4, P. 575**

Combined human/machine forecasting technique shows promise. Severe duststorms in Great Plains forecast with fair reliability. Forecasts derived from combination of human expertise and variety of meteorological information sources, including all current and recent weather observations, standard National Meteorological Center (NMC) computer analyses for surface and upper air, and NMC 12-, 24-, 36-, and 48-hour prognostication charts generated by Limited Fine Mesh computer model.

B84-10412**COST CONSIDERATIONS IN NONLINEAR FINITE-ELEMENT COMPUTING**

S. UTKU (Duke University), R. J. MELOSH (Duke University), M. ISLAM (Duke University), and M. SALAMA (CALTECH)

Apr. 1985

NPO-16237**Vol. 8, No. 4, P. 576**

Conference paper discusses computational requirements for finiteelement analysis using quasi-linear approach to nonlinear problems. Paper evaluates computational efficiency of different computer architectural types in terms of relative cost and computing time.

B84-10413**SOURCE PRE-PROCESSOR OR INTERFACE-SPECIFICATION LANGUAGE**

W. J. LUEBKERT (Telos Computing, Inc.)

Apr. 1985

NPO-15814**Vol. 8, No. 4, P. 576**

A user's guide available for source program pre-processor (SPP) method for producing descriptions of data structures or records. SPP enhances usefulness of Program Design Language (PDL) - software-design tool decreases debugging time and improves quality of source programs.

B84-10414**LIBRARY INFORMATION-PROCESSING SYSTEM**

Innovator Not Given (Informatics General Corp.) Apr. 1985

GSC-12861**Vol. 8, No. 4, P. 576**

System works with Library of Congress MARC II format. System composed of subsystems that provide wide range of library information processing capabilities. Format is American National standards Institute (ANSI) format for machine-readable bibliographic data. Adaptable to any medium-to-large library.

B84-10415**ORBITAL AND GEODETIC ERROR ANALYSIS**

T. FELSENTREGER, P. MARESCA (Business Technological Systems), and R. ESTES (Business Technological Systems)

Apr. 1985

GSC-12768**Vol. 8, No. 4, P. 577**

Results that previously required several runs determined in more computer-efficient manner. Multiple runs performed

09 MATHEMATICS AND INFORMATION SCIENCES

only once with GEODYN and stored on tape. ERODYN then performs matrix partitioning and linear algebra required for each individual error-analysis run.

B84-10416

MANAGING SOFTWARE DESIGN AND DESIGN CHANGES

R. E. LOESH (CALTECH)

Apr. 1985

NPO-15331

Vol. 8, No. 4, P. 577

Microprocessor-based system for document production work scheduling, and change control and management information aids in design, development, and control of software. Main components Z80 microprocessor, floppydisk and hard-disk drives, and a character printer. System linked to large computer. Major software components are control program monitor (CP/M), text-editing and wordprocessing system, workbreakdown-schedule processor, and database management tool.

B84-10417

ERROR CORRECTION FOR TANDEM DATA-TRANSMISSION PATHS

E. C. POSNER (CALTECH) and A. L. RUBIN (CALTECH)

Apr. 1985

NPO-16125

Vol. 8, No. 4, P. 578

Mathematical analysis for digital data transmission calculates optimum number of binary error-correcting repeaters to install in given number of wideband channel links. Asymptotic results compared to computed numerical results.

B84-10418

SIMPLIFIED CONVOLUTION CODES

T. K. TRUONG (CALTECH) and I. S. REED (CALTECH)

Apr. 1985

NPO-16251

Vol. 8, No. 4, P. 578

Simple recursive algorithm efficiently calculates minimum-weight error vectors using Diophantine equations. Recursive algorithm uses general solution of polynomial linear Diophantine equation to determine minimum-weight error polynomial vector in equation in polynomial space.

B84-10419

PREDICTIVE SMOOTHING-CONVOLUTION ALGORITHM

J. C. ALVAREZ (Ford Aerospace Communications Corp.)

Apr. 1985

MSC-20604

Vol. 8, No. 4, P. 578

Signal estimate continually updated with or without phase correction. Technique useful where signal varies slowly with respect to sampling rate.

B84-10420

PARALLEL VLSI ARCHITECTURE

T. K. TRUONG (CALTECH), I. REED (University of Southern California), C. YEH (University of Southern California), and H. SHAO (University of California)

Apr. 1985

NPO-16124

Vol. 8, No. 4, P. 578

Fermat number transformation convolutes two digital data sequences. Very-large-scale integration (VLSI) applications, such as image and radar signal processing, X-ray reconstruction, and spectrum shaping, linear convolution of two digital data sequences of arbitrary lengths accomplished using Fermat number transform (ENT).

Typical Subject Index Listing

The title of each Tech Brief is listed under several selected subject headings to provide the user with a variety of approaches in his search for specific information. The Tech Brief number, e.g., B84-10400, is located under and to the right of the title and is followed by a two-digit number, e.g., 08, which designates the subject category in which the entire entry can be found.

Gas Atmospheres Improve
Silicon-Ribbon Quality
NPO-15129 B84-10393 08

CONTROLLERS
Programmable Multirate Controller
MFS-25533 B84-10042 02

CONVECTION
Minimizing Convection During Crystal Growth
NPO-15811 B84-10194 08

CONVERGENCE
Algorithm Solves Constrained and Unconstrained Optimization Problems
MSC-20683 B84-10216 09

COOLING
Preventing Fires in Cryogenic Oxidizer Lines
MFS-19830 B84-10115 06

COPOLYMERS
Elastomeric Cathode Binder
NPO-15424 B84-10315 04

CORRELATION
Estimates of Small Signal/Noise Ratios
NPO-15653 B84-10257 02

CORROSION TESTS
Solution Potentials Indicate
Aluminum-Alloy Tempers
MFS-25846 B84-10081 04

COST ANALYSIS
Software Cost-Estimation Model
NPO-15862 B84-10209 09

COST EFFECTIVENESS
Research-Concept Evaluation
LAR-13143 B84-10206 09

COST ESTIMATES
Price Estimation Guidelines
NPO-15569 B84-10186 08
Software Cost-Estimation Model
NPO-15862 B84-10209 09

COUNTERSINKING
Countersink Drill
MFS-19852 B84-10163 07

COUPLING
Remote Coupling of Electrical Connectors
MSC-20414 B84-10363 07

COUPLING CIRCUITS
Powerline Coupler for Windmill Motor/Generators
MFS-25944 B84-10010 01

COUPLINGS
High-Pressure Coupling for Open-Ended Tubes
MSC-20451 B84-10326 06
Hybrid-Vehicle Transmission System
NPO-16119 B84-10372 07

CRACK PROPAGATION
Double Linear Damage Rule for Fatigue Analysis
LEW-14058 B84-10103 06

CRACKING (FRACTURING)
Coal-Face Fracture With A Two-Phase Liquid
NPO-15849 B84-10090 04

CROSSTALK
Convolutionally-Coded Unbalanced QPSK Systems
NPO-15566 B84-10267 02

CRYOGENIC COOLING
Sealing Mechanical Cryogenic Coolers
NPO-15139 B84-10149 07

CRYSTAL DEFECTS
Defect Chemistry of Hg_{1-x}Cd_xTe
MFS-25851 B84-10309 04

CRYSTAL GROWTH
Eutectic-Alloy Morphology
MFS-25937 B84-10084 04
Two-Crucible Czochralski Process
NPO-15110 B84-10170 08
Minimizing Convection During Crystal Growth
NPO-15811 B84-10194 08
Gravitational Effects on Crystal Growth by Vapor Transport
NPO-15853 B84-10391 08
Contoured Orifice for Silicon-Ribbon Die
NPO-15126 B84-10394 08

CRYSTALLIZATION
Reciprocating Crystallizer
MFS-25948 B84-10196 08

CURRENT REGULATORS
Hall-Effect Ground-Fault Interruptor
NPO-15915 B84-10255 01

CURVED PANELS
Prestressed Thermal-Protection Panels
MSC-20254 B84-10382 08
Strong, Lightweight Curved Panels
MSC-16278 B84-10399 08

CUTTERS
Square-Cutting Grinder
KSC-11257 B84-10199 08
Stripping the Sheath From Stranded Cables
NPO-15082 B84-10390 08

CUTTING
Automatically Dressing Blades in Silicon-Water Cutting
NPO-15745 B84-10174 08

CYLINDRICAL SHELLS
Quick-Change Holder for Aeronautical-Research Microphones
FRC-11072 B84-10347 06

CZOCHEWSKI METHOD
Two-Crucible Czochralski Process
NPO-15110 B84-10170 08

D

DAMAGE
Reversing Optical Damage In LiNbO₃ Switches
NPO-16239 B84-10227 01

DAMPING
Transient Response Analysis
MSC-20590 B84-10135 06
Improved Coulomb-Friction Damper
MSC-20505 B84-10332 06

DATA ACQUISITION
Fast Dual Analog-to-Digital Converter
NPO-15006 B84-10026 02
Acquisition of Dynamic Stress/Strain Data
MSC-20589 B84-10122 06

DATA BASE MANAGEMENT SYSTEMS
Relational Information Management Data-Base System
LAR-12943 B84-10207 09
Integrated Procurement Management System, Version II
MSC-20278 B84-10211 09

DATA BASES
Computerized Interactive Harness Engineering
NPO-16272 B84-10014 01

DATA MANAGEMENT
Adding Stale-Data Flag to and Error-Correcting Code
KSC-11134 B84-10220 09

DATA SYSTEMS
Programmable Multirate Controller
MFS-25533 B84-10042 02
Optical Mass Memory System Specification
MFS-25592 B84-10047 02

DATA TRANSMISSION
Intercomputer Communication Link
NPO-13446 B84-10029 02

DECODERS
Real-Time Reed-Solomon Decoder
NPO-15982 B84-10228 01

DECODING
Simplified Convolution Codes
NPO-16251 B84-10418 09

DECONTAMINATION
Decontaminating Aluminum/Ammونيا Heat Pipes
NPO-16066 B84-10179 08

DELAMINATING
Welding Many Thin Metal Layers
MSC-20698 B84-10398 08

DENDRITIC CRYSTALS
Impurity Effects on Dendritic Growth
MFS-25672 B84-10197 08

DENSITY MEASUREMENT
Gas-Density Gage
MFS-28011 B84-10353 06

DESALINIZATION
Solar-Thermal-Desalination Study
NPO-15795 B84-10071 03

DESCENT TRAJECTORIES
Fuel-Conservative Descents Using A Programmable Calculator
LAR-13138 B84-10333 06

DESIGN ANALYSIS
Evaluating Solar Collectors
NPO-15733 B84-10068 03
Software Design Analyzer System
NPO-16234 B84-10210 09
More Efficient Structural Design by Optimality Criteria
NPO-15832 B84-10219 09
Ellipsoidal Balloon Antenna
NPO-15931 B84-10238 01
Paraboloidal-Dish Power Modules
NPO-16100 B84-10302 03

DESULFURIZING
Desulfurization of Coal in Fluidized Beds
NPO-15924 B84-10303 04

DIAGRAMS
Root-Locus Algorithms
NPO-16154 B84-10221 09

DIALYSIS
Dialysis Extraction for Chromatography
NPO-15691 B84-10100 05

DIELECTRICS
Inert-Gas Electrical Discharge Machining
MFS-19778 B84-10162 07

SUBJECT INDEX

Theoretical Investigation Of Dielectric
Horn Antennas
GSC-12876 B84-10245 01

DIES
Selecting Flatpack Lead-Forming
Dies
MFS-25951 B84-10141 06
Machining of Silicon-Ribbon-Forming
Dies
NPO-15127 B84-10173 08
Contoured Orifice for Silicon-Ribbon
Die
NPO-15126 B84-10394 08

DIESEL ENGINES
Testing Ceramics for Diesel Engines
NPO-15624 B84-10078 04

DIFFERENTIAL PRESSURE
Differential Pressure Helps Seal Ball
Valve
MSC-20615 B84-10330 06

DIGITAL DATA
Parallel VLSI Architecture
NPO-16124 B84-10420 09

DIGITAL FILTERS
Fast Two-Dimensional Digital-Filter
Hardware
MFS-25876 B84-10204 09

DIGITAL SYSTEMS
Optical Quantum Receiver For Binary
Signals
NPO-15122 B84-10030 02

DIOPHANTINE EQUATION
Simplified Convolution Codes
NPO-16251 B84-10418 09

DIRECT POWER GENERATORS
Integrated Fuel Cell/Coal Gasifier
NPO-16062 B84-10314 04

DISPLAY DEVICES
A Visually Oriented Text Editor
NPO-15088 B84-10213 09

DISTANCE MEASURING EQUIPMENT
Measuring Clearance Indirectly
MFS-19875 B84-10355 06

DISTILLATION EQUIPMENT
Solar-Powered Water Distillation
NPO-15894 B84-10069 03

DIVERTERS
Diverter Lip for Seal
MFS-19891 B84-10168 07

DOCUMENTATION
SDDL: Software Design
Documentation Language
NPO-16201 B84-10208 09

DOLLIES
Forklift Support Dolly
GSC-12916 B84-10147 07

DOORS
Glass/Epoxy Door Panel for
Automobiles
NPO-15057 B84-10389 08

DOPPLER EFFECT
Estimating Doppler Shifts for
Synthetic-Aperture Radar
NPO-15990 B84-10264 02

DOPPLER RADAR
Report on Satellite Radar for
Detecting Ocean Currents
NPO-15704 B84-10032 02

DRIFT RATE
Removing Drift From
Frequency-Stability Measurements
NPO-15833 B84-10040 02

DRILLS
Countersink Drill
MFS-19852 B84-10163 07

DRY CELLS
Battery-Operated High-Voltage
Power Supply
GSC-12818 B84-10001 01

DUST STORMS
Predicting Severe Duststorms
NPO-14999 B84-10411 09

DYNAMIC CHARACTERISTICS
Dynamic Simulation and Stability
Analysis
GSC-12810 B84-10123 06

DYNAMIC PRESSURE
Dynamic Calibration of Pressure
Transducers
LAR-13094 B84-10335 06

DYNAMIC RESPONSE
Transient Response Analysis
MSC-20590 B84-10135 06
Calculating Closed-Loop Sensitivity to
Parameter Variations
NPO-15941 B84-10202 09

DYNAMIC STRUCTURAL ANALYSIS
Turbine-Engine Transient-Rotor
Analysis
LEW-13726 B84-10125 06

DYNAMOMETERS
Performance Testing of the DOE
Electric Test Vehicle
NPO-15660 B84-10161 07

E

EARTHQUAKE RESISTANT STRUCTURES
Active Pulse Suppression of
Structural Vibrations
NPO-15788 B84-10340 06

ECOLOGY
Experimental Ecosystems Sealed in
Glass
NPO-15712 B84-10097 05

ECONOMIC ANALYSIS
Assembly-Line Manufacturing
Industry Simulation
NPO-16032 B84-10187 08

ECOSYSTEMS
Experimental Ecosystems Sealed in
Glass
NPO-15712 B84-10097 05

EDDY CURRENTS
Tube-Wall Thickness Detector
MFS-19741 B84-10024 01
Eddy-Current Inspection of Ball
Bearings
MFS-25833 B84-10104 06
Eddy-Current Reference Standard
MFS-19824 B84-10138 06
Magnetic Despinning System
MFS-25966 B84-10166 07
Differential-Coil Eddy-Current
Material Sorter
MFS-19872 B84-10231 01

EDITING
A Visually Oriented Text Editor
NPO-15088 B84-10213 09

ELASTIC PROPERTIES
Properties of Low-Expansion
Laminates
MFS-25859 B84-10082 04

ELASTOMERS
Elastomer Encapsulant for Solar-Cell
Arrays
NPO-15663 B84-10083 04

ELECTRICAL MEASUREMENT

Predicting Polymer/Liquide
Interactions
NPO-14874 B84-10312 04
Elastomeric Cathode Binder
NPO-15424 B84-10315 04

ELECTRIC AUTOMOBILES
Performance Testing of the DOE
Electric Test Vehicle
NPO-15660 B84-10161 07

ELECTRIC BATTERIES
Circuit for Monitoring Cell Voltages
MFS-25924 B84-10008 01

ELECTRIC BRIDGES
Platinum-Resistor Differential
Temperature Sensor
NPO-15666 B84-10252 01

ELECTRIC CHOPPERS
Negatively Coupled Inductors for
Odd-Phase Choppers
NPO-15380 B84-10017 01

ELECTRIC CONNECTORS
Wire-Identification Instrument
NPO-15633 B84-10027 02

ELECTRIC DISCHARGES
Improved Spark-Ignitor Circuitry
MFS-19751 B84-10019 01
Setup Aid for Electrical-Discharge
Machining
MFS-19874 B84-10370 07

ELECTRIC GENERATORS
Front-End Program for SYSGEN
NPO-15782 B84-10036 02
Assessing Energy-Generating
Systems
NPO-16159 B84-10056 03
Thermoelectric Generator
NPO-16164 B84-10059 03

ELECTRIC HYBRID VEHICLES
Electric/Hybrid Vehicle Simulation
NPO-15229 B84-10034 02
Hybrid-Vehicle Transmission System
NPO-16119 B84-10372 07
Power Train for Hybrid Electric
Vehicle
NPO-15742 B84-10377 07

ELECTRIC MOTOR VEHICLES
Batteries for Electric Vehicles
NPO-15142 B84-10244 01

ELECTRIC MOTORS
Advanced dc-Traction-Motor Control
System
NPO-16118 B84-10229 01

ELECTRIC PULSES
Eliminating False Signals From
Electromechanical Keyboards
MSC-20429 B84-10044 02
Pulsed-Current Transducers
NPO-14048 B84-10251 01

ELECTRIC RELAYS
Solid-State Latching Relay
NPO-15028 B84-10250 01

ELECTRIC WIRE
Calculating Strain Relief in
Electronic-Component Leads
MSC-20416 B84-10248 01

ELECTRICAL FAULTS
Testing for Solar-Array Hotspots
NPO-15596 B84-10073 03

ELECTRICAL GROUNDING
Estimation of Grounding-Strap
Resistances
MSC-20694 B84-10241 01

ELECTRICAL MEASUREMENT
LRU Voltage Analysis
MSC-20699 B84-10035 02

ELECTRICAL RESISTIVITY

Measuring The Contact Resistances
Of Photovoltaic Cells
NPO-16168 B84-10240 01
Estimation of Grounding-Strap
Resistances
MSC-20694 B84-10241 01

ELECTROACOUSTIC TRANSDUCERS
Fabricating Underwater
Electroacoustic Transducers
LAR-13007 B84-10381 08

ELECTROCHEMICAL CELLS
High-Cycle-Life Lithium Cell
NPO-15921 B84-10232 01

ELECTRODES
EDM Electrode for Internal Grooves
MFS-19733 B84-10369 07

ELECTROLYSIS
Molten-Salt Electrolysis
NPO-15535 B84-10320 04

ELECTROLYTES
Equation for Electrolyte Viscosity
NPO-15096 B84-10076 04

ELECTRON ATTACHMENT
Electron-Attachment Profiles
NPO-14865 B84-10299 03

ELECTRON BEAM WELDING
Welding Many Thin Metal Layers
MSC-20698 B84-10398 08

ELECTRON MICROSCOPES
Specimen Holder for Analytical
Electron Microscopes
MSC-20398 B84-10331 06

ELECTRON MOBILITY
High-Mobility Epitaxial Silicon
Wafers
LAR-12846 B84-10175 08

ELECTRONIC CONTROL
Digital Sequence Controller
NPO-15725 B84-10012 01
Advanced dc-Traction-Motor Control
System
NPO-16118 B84-10229 01

ELECTRONIC EQUIPMENT TESTS
Direct-Current Unbalance Detector
NPO-15978 B84-10007 01

ELECTRONIC MODULES
Real-Time Reed-Solomon Decoder
NPO-15982 B84-10228 01

ELECTROPHORESIS
Parameters Affecting
Electrophoresis
MFS-25593 B84-10099 05

ELECTROPLATING
Polyurethane Masks Large Areas in
Electroplating
MFS-19825 B84-10180 08
Increasing the Ductility of
Electroplated Metals
MFS-19873 B84-10304 04

ELLIPTIC FUNCTIONS
Flight-Stability Extremes Calculated
From the Uncertainty Ellipse
MSC-20308 B84-10409 09

ENCAPSULATING
Elastomer Encapsulant for Solar-Cell
Arrays
NPO-15663 B84-10083 04

ENDOSCOPES
Imaging System For
High-Temperature Processes
NPO-15945 B84-10273 02

ENERGY CONSERVATION
Reducing Stepping-Motor Power
Consumption
MFS-25119 B84-10246 01

ENERGY CONVERSION EFFICIENCY
Solar/Thermal Powerplant
Simulation
NPO-15440 B84-10058 03
Thermoelectric Generator
NPO-16164 B84-10059 03

ENERGY STORAGE
Solar-Powered Flywheel
MFS-25978 B84-10157 07

ENGINE TESTS
Ignition-Spark Detector for Engine
Testing
MFS-19890 B84-10365 07

ENGINEERING MANAGEMENT
Relational Information Management
Data-Base System
LAR-12943 B84-10207 09

ENVIRONMENT SIMULATION
Integrated System for Environmental
Simulation
KSC-11274 B84-10065 03

ENVIRONMENTAL MONITORING
Dialysis Extraction for
Chromatography
NPO-15691 B84-10100 05

ENVIRONMENTAL TESTS
Determining The Life Expectancy of
Photovoltaic Systems
NPO-15683 B84-10253 01

ERROR ANALYSIS
Convolutionally-Coded Unbalanced
QPSK Systems
NPO-15566 B84-10267 02
Determining The Slope Error Of A
Parabolic Reflector
NPO-15713 B84-10280 03
Orbital and Geodetic Error Analysis
GSC-12768 B84-10415 09

ERROR CORRECTING CODES
Reed-Solomon Encoder
NPO-16074 B84-10048 02
Adding Stale-Data Flag to and
Error-Correcting Code
KSC-11134 B84-10220 09
Simplified Convolution Codes
NPO-16251 B84-10418 09

ERROR CORRECTING DEVICES
Error Correction for Tandem
Data-Transmission Paths
NPO-16125 B84-10417 09

ETCHING
Fabrication of Thick Gold Strip Lines
NPO-16238 B84-10190 08

EUTECTIC ALLOYS
Eutectic-Alloy Morphology
MFS-25937 B84-10084 04

EUTECTIC COMPOSITES
Heat Storage and Transport
NPO-15468 B84-10291 03
Eutectic Contact Inks for Solar Cells
NPO-15171 B84-10305 04

EVALUATION
Safety Evaluation Methodology for
Mining Systems
NPO-15831 B84-10375 07

EVAPORATORS
Sintered Lining for Heat-Pipe
Evaporator
NPO-16172 B84-10118 06

EXCITATION
Acoustic Levitation With One Driver
NPO-15793 B84-10185 08

EXHAUST GASES
Integrated Exhaust-Gas-Analysis
System
LEW-14062 B84-10337 06

EXPLOSIVE WELDING
Explosive Welding for Remote
Applications
LAR-13119 B84-10397 08

EXTENSOMETERS
Acousto-optic Extensometer for
Bolts
MFS-19914 B84-10336 06

EXTRACTION
Low-Temperature Extraction of Oil
From Shale
NPO-15656 B84-10310 04

EYE EXAMINATIONS
Photographic Screening for Eye
Defects

FOAMS
Polyurethane-Foam Maskant
MFS-19786 B84-10091 04

FOCUSING
Point-Focusing Solar-Power
Distributed Receivers
NPO-15578 B84-10294 03

FOLDING STRUCTURES
Stowable Solar-Cell Array
NPO-15893 B84-10020 01
Joint For Erectable and Collapsible
Frames
MSC-20635 B84-10119 06
Collapsible and Deployable Trusses
MFS-25945 B84-10177 08
Synchronously Deployable Truss
LAR-13117 B84-10350 06
Deployable Geodesic Truss
LAR-13113 B84-10351 06

FORCE DISTRIBUTION
Forklift Support Dolly
GSC-12916 B84-10147 07

FORECASTING
Predicting the Reliability of Solar-Cell
Interconnections
NPO-15976 B84-10410 09
Predicting Severe Duststorms
NPO-14999 B84-10411 09

FORMING TECHNIQUES
Beam-Cap-Forming Machine
MFS-27007 B84-10183 08
Silicon Formation for Solar Cells
NPO-14973 B84-10313 04

FOULING
Monitoring Marine Microbial Fouling
MFS-25928 B84-10096 05

Heat-Exchanger Computational
Procedure For Temperature-Dependent
Fouling
LEW-13874 B84-10126 06

FRAMES
Joint For Erectable and Collapsible
Frames
MSC-20635 B84-10119 06

FREQUENCY DISCRIMINATORS
Discriminator Aids Phase-Lock
Acquisition
NPO-14311 B84-10233 01

FREQUENCY MEASUREMENT
Instrumentation for Solar-Oscillation
Measurements
NPO-15687 B84-10287 03
Insulation Debond Detection
MFS-25862 B84-10324 06

FREQUENCY MODULATION
Temperature Compensation for a
Frequency-Modulated Oscillator
MSC-20556 B84-10249 01

FREQUENCY MULTIPLIERS
Normalizing VFO Frequency by
Non-Power-of-2 Division
NPO-15330 B84-10049 02

FREQUENCY SHIFT
Frequency-Modulation Correlation
Spectrometer
NPO-15558 B84-10061 03

FREQUENCY STABILITY
Removing Drift From
Frequency-Stability Measurements
NPO-15833 B84-10040 02
Adjustable-Frequency Spectrophone
Laser Stabilization
NPO-15516 B84-10067 03

FRESH WATER
Solar-Thermal-Desalination Study
NPO-15795 B84-10071 03

FRESNEL LENSES
Fresnel-Lens/Heat-Storage System
NPO-16242 B84-10289 03

FRICTION MEASUREMENT
Measuring the Runout on a Rotary
Shaft
MFS-19694 B84-10169 07

FUEL CELLS
Integrated Fuel Cell/Coal Gasifier
NPO-16062 B84-10314 04

FUEL CONSUMPTION
The Effect of Wind on the
Aerodynamic Resistance of Highway
Vehicles
NPO-14771 B84-10152 07
Fuel-Conservative Descents Using A
Programmable Calculator
LAR-13138 B84-10333 06

FUEL TESTS
Rapid Freezing-Point Measurement
LEW-14019 B84-10279 03

FUEL VALVES
A Positive-Shutoff Fuel Valve
MFS-19779 B84-10145 06
Garter Valves
MFS-19899 B84-10359 07

FUEL-AIR RATIO
Measuring Absolute Oxygen
Pressure
NPO-16131 B84-10113 06

FURNACES
Temperature-Gradient Furnace for
Solidification Experiments
MFS-25963 B84-10101 06
Improved Ellipsoidal Radiation
Furnace
MFS-25933 B84-10102 06

FUSELAGES

Continuous-Filament Isogrid
Composite Panel
LAR-12975 B84-10344 06
FUSES (ORDNANCE)
Burnwire Simulator
NPO-15883 B84-10021 01
FUSION WELDING
Optical-Fiber-Welding Machine
NPO-15004 B84-10379 08

G

GAS ANALYSIS

Laser Pollutant-Measuring Systems
NPO-16101 B84-10285 03
Electron-Attachment Profiles
NPO-14865 B84-10299 03
Integrated Exhaust-Gas-Analysis
System
LEW-14062 B84-10337 06

GAS DENSITY

Gas-Density Gage
MFS-28011 B84-10353 06

GAS DYNAMICS

Measuring the Liquid Content of a
Gas
MFS-25990 B84-10343 06

GAS EXPANSION

Two-Phase Wet/Dry Engine for
Waste-Heat Recovery
NPO-15621 B84-10164 07

GAS FLOW

Conserving Purge Gases
MFS-19625 B84-10140 06
Constant-Operating-Resistance
Wire Probe
LAR-13144 B84-10341 06

GAS LASERS

Adjustable-Frequency Spectrophone
Laser Stabilization
NPO-15516 B84-10067 03

GAS POCKETS

Detection of Gas Slugs in Heat
Pipes
NPO-16064 B84-10144 06

GAS TURBINE ENGINES

Turbine-Engine Transient-Rotor
Analysis
LEW-13726 B84-10125 06

GASEOUS DIFFUSION

Mathematical Model for Gas
Dissolution in Glass
NPO-15104 B84-10093 04

GASIFICATION

Solar-Heated Gasifier
NPO-15071 B84-10293 03

GATES (CIRCUITS)

Optical Logic Gates
NPO-15134 B84-10003 01

GEOMETRICAL OPTICS

A General Optical Systems
Evaluation Program
GSC-12823 B84-10057 03

GETTERS

Activated Internal Gettering
NPO-15530 B84-10316 04

GLASS

Mathematical Model for Gas
Dissolution in Glass
NPO-15104 B84-10093 04

GLASS FIBERS

Containerless Manufacture of Glass
Optical Fibers
MFS-25905 B84-10075 04

Pure Glasses From Multicomponent
Gels
NPO-16160 B84-10079 04

GRAPHITE-EPOXY COMPOSITES

Reducing Thermal Expansivity of
Composite Panels
MFS-25793 B84-10117 06
Efficient Joints for Graphite/Epoxy
Structures
LAR-13091 B84-10121 06
Strong, Lightweight Curved Panels
MSC-16278 B84-10399 08

GRAVITATIONAL EFFECTS

Gravitational Effects on Crystal
Growth by Vapor Transport
NPO-15853 B84-10391 08

GRINDING MACHINES

Magnetic Chuck for Precise Grinding
MFS-19764 B84-10191 08
Square-Cutting Grinder
KSC-11257 B84-10199 08

GUARDS (SHIELDS)

Guard For Fuse Caps
KSC-11283 B84-10243 01
Hinged Shields for Machine Tools
GSC-12915 B84-10366 07

H

HALL EFFECT

Hall-Effect Ground-Fault Interruptor
NPO-15915 B84-10255 01

HARDNESS

Measuring Rind Thickness on
Polyurethane Foam
MFS-25941 B84-10116 06

HARMONICS

Negatively Coupled Inductors for
Odd-Phase Choppers
NPO-15380 B84-10017 01

HEART IMPLANTATION

Transducers For Heat Research
NPO-15095 B84-10094 05

HEAT EXCHANGERS

Receiver For Solar Air Turbine
NPO-15124 B84-10052 03
Heat-Exchanger Computational
Procedure For Temperature-Dependent
Fouling
LEW-13874 B84-10126 06
A Ceramic Heat Exchanger for Solar
Receivers
NPO-15771 B84-10296 03

HEAT OF VAPORIZATION

Solar-Power System Produces
High-Pressure Steam
NPO-15434 B84-10288 03

HEAT PIPES

Flexible Heat Pipe
GSC-12864 B84-10109 06
Uniform-Temperature Walls for Cloud
Chambers
MFS-25931 B84-10110 06
Detection of Gas Slugs in Heat
Pipes
NPO-16064 B84-10144 06

Decontaminating Aluminum/Ammo-
nia Heat Pipes
NPO-16066 B84-10119 08

HEAT RADIATORS

Solar Shutter
NPO-15428 B84-10292 03

HEAT RESISTANT ALLOYS

Lightweight High-Temperature
Thermal Insulation
MFS-19754 B84-10306 04

HEAT STORAGE

Fresnel-Lens/Heat-Storage System
NPO-16242 B84-10289 03
Heat Storage and Transport
NPO-15468 B84-10291 03

HEAT TRANSFER

Fabricating Thin-Shell Heat-Transfer
Models
LAR-13087 B84-10108 06

HEAT TREATMENT

Vacuum Baking To Remove Volatile
Materials
NPO-15648 B84-10080 04
Reducing Thermal Expansivity of
Composite Panels
MFS-25793 B84-10117 06

HESSIAN MATRICES

Algorithm Solves Constrained and
Unconstrained Optimization Problems
MSC-20683 B84-10216 09

HIERARCHIES

Software-Implementation Plan
NPO-16123 B84-10223 09

HIGH LEVEL LANGUAGES

Language for Allocation and Network
Scheduling
MSC-20633 B84-10212 09

HIGH PRESSURE

High-Pressure Coupling for
Open-Ended Tubes
MSC-20451 B84-10326 06

HIGH TEMPERATURE FLUIDS

High-Temperature Pump
NPO-15783 B84-10376 07

HIGH TEMPERATURE TESTS

Fabricating Thin-Shell Heat-Transfer
Models
LAR-13087 B84-10108 06
Brazing Alloys Indicate
Turbomachinery Temperatures
MFS-19792 B84-10327 06

HIGH VOLTAGES

Battery-Operated High-Voltage
Power Supply
GSC-12818 B84-10001 01

HOLDERS

Clamp Secures Material to Cylinder
Base
MFS-19479 B84-10158 07
Holder for Straightening Bent Tubes
MFS-19705 B84-10200 08
Specimen Holder for Analytical
Electron Microscopes
MSC-20398 B84-10331 06
Quick-Change Holder for
Aeronautical-Research Microphones
FRC-11072 B84-10347 06

HORN ANTENNAS

Efficient Reflector Antenna
NPO-16262 B84-10239 01
Theoretical Investigation Of Dielectric
Horn Antennas
GSC-12876 B84-10245 01

HOT PRESSING

Increasing the Ductility of
Electroplated Metals
MFS-19873 B84-10304 04

HOT-WIRE ANEMOMETERS

Constant-Operating-Resistance
Wire Probe
LAR-13144 B84-10341 06

Measuring the Liquid Content of a Gas
MFS-25990 B84-10343 06

HOUSINGS
Guard For Fuse Caps
KSC-11283 B84-10243 01

HYDROGEN MASERS
Removing Drift From Frequency-Stability Measurements
NPO-15833 B84-10040 02

HYDROLYSIS
Aquatic Plants Aid Sewage Filter
MFS-25808 B84-10095 05

I

IGNITERS
Improved Spark-Ignitor Circuitry
MFS-19751 B84-10019 01
Ignition-Spark Detector for Engine Testing
MFS-19890 B84-10365 07

IMAGE ENHANCEMENT
Fast Two-Dimensional Digital-Filter Hardware
MFS-25876 B84-10204 09

IMAGE FILTERS
Soft-X-Ray Prefilter for Hot, Bright Objects
NPO-15972 B84-10060 03

IMAGE RESOLUTION
Report on Satellite Radar for Detecting Ocean Currents
NPO-15704 B84-10032 02
Eye-Movement Tracker Would Reduce Video Bandwidth
NPO-15432 B84-10043 02

IMAGING TECHNIQUES
Remote-Imaging Parameters
NPO-14869 B84-10041 02
Measuring Tracking Accuracy of CCD Imagers
NPO-15665 B84-10260 02
Imaging System For High-Temperature Processes
NPO-15945 B84-10273 02
Quicker Selection of CCD Images
NPO-15345 B84-10274 02
High-Resolution vice Camera
NPO-15086 B84-10275 02
Reflecting Schmidt/Littrow Prism Imaging Spectrometer
NPO-15801 B84-10277 03

IMPACT TESTS
Insulation Debond Detection
MFS-25862 B84-10324 06

IMPACT TOLERANCES
Energy-Absorbing Airframes for General Aviation
LAR-12808 B84-10111 06

IMPEDANCE MATCHING
Matching Impedances and Modes in Acoustic Levitation
NPO-16022 B84-10184 08

IMPURITIES
Impurity Effects on Dendritic Growth
MFS-25672 B84-10197 08

INCLUSIONS
Reducing Liquid Permeation Through Polymer Sheets
NPO-15802 B84-10089 04

INDUCTION HEATING
Rapid Adhesive Bonding for Metals and Composites
LAR-13066 B84-10176 08

INDUCTORS
Negatively Coupled Inductors for Odd-Phase Choppers
NPO-15380 B84-10017 01

INFORMATION DISSEMINATION
NASTRAN NASTPLT Plotting Post Processor
GSC-12833 B84-10215 09
Interactive Digital Signal Processor
GSC-12862 B84-10268 02

INFORMATION FLOW
Packet Telemetry and Packet Telecommand
NPO-16301 B84-10276 02

INFORMATION MANAGEMENT
Computerized Interactive Harness Engineering
NPO-16272 B84-10014 01
Relational Information Management Data-Base System
LAR-12943 B84-10207 09

Library Information-Processing System
GSC-12861 B84-10414 09

INFORMATION SYSTEMS
Techni-kits and Techni-kit Building Systems
NPO-15956 B84-10203 09

INFRARED SPECTRA
A Sensitive Infrared Photodetector
NPO-15926 B84-10022 01

INFRARED TRACKING
Integrated Laser and Light Detector
NPO-15943 B84-10230 01

INJECTION LASERS
Integrated Laser and Light Detector
NPO-15943 B84-10230 01

INORGANIC CHEMISTRY
Making Pure Fine-Grained Inorganic Powder
NPO-16398 B84-10086 04

INORGANIC COATINGS
High-Temperature Coating for Titanium
NPO-16222 B84-10311 04

INPUT/OUTPUT ROUTINES
Software for PROM Programming
MSC-20641 B84-10013 01
Communication Program Emulates Switchboard
MFS-19917 B84-10270 02

INSERTION
Tool for Inserting and Removing Tube Plugs
MFS-19871 B84-10364 07

INSERTS
Annular-Tube Reinforcer
MFS-19738 B84-10201 08

INSPECTION
Fluorescent Gage Indication
ARC-11397 B84-10384 08
Edge Labels for Multilayer Circuit Boards
MSC-20704 B84-10388 08

INSTALLING
Connector-Array Attachment Matrix
NPO-15778 B84-10401 08

INSTRUCTION SETS (COMPUTERS)
Software-Implementation Plan
NPO-16123 B84-10223 09

INTEGRATED CIRCUITS
Circuit for Monitoring Cell Voltages
MFS-25924 B84-10008 01
Parallel VLSI Architecture
NPO-16124 B84-10420 09

INTERFACES
Intercomputer Communication Link
NPO-13446 B84-10029 02

INTERFEROMETERS
Interferometer Measures Broadband Surface Acoustic Waves
LAR-12966 B84-10050 03
Interferometer Detects Acoustic Emissions in Composites
LAR-12965 B84-10112 06
Interferometer for Measuring Acoustic Signals
LAR-13030 B84-10281 03

INTERFEROMETRY
Thermal-Expansion Measurement
MFS-27000 B84-10064 03

INTERPROCESSOR COMMUNICATION
Communication Program Emulates Switchboard
MFS-19917 B84-10270 02

ION BEAMS
Fabrication of Thick Gold Strip Lines
NPO-16238 B84-10190 08

IONIZERS
Zero-Net-Charge Air Ionizer
NPO-15937 B84-10054 03
Measuring Air-Ionizer Output
NPO-16058 B84-10242 01

IONOSPHERIC CROSS MODULATION
Calibrating for Ionospheric Phase Delays
NPO-15430 B84-10297 03

IRRADIANCE
Ten Thousand Solar Constants Radiometer
NPO-15922 B84-10290 03

ISOLATION
Improved RF Isolation Amplifier
NPO-16026 B84-10011 01

ISOLATORS
Stable Optocoupler
MFS-25927 B84-10226 01

ISOSTATIC PRESSURE
Samarium/Cobalt Magnets
MFS-27006 B84-10088 04

J

JET MIXING FLOW
Prewhirl Jet Model
MFS-19826 B84-10136 06

JOINTS (JUNCTIONS)
Joint For Erectable and Collapsible Frames
MSC-20635 B84-10119 06
Efficient Joints for Graphite/Epoxy Structures
LAR-13091 B84-10121 06

K

KEYING

Eliminating False Signals From

 Systems
 KSC-11273 B84-10031 02
 Measuring The Contact Resistances
 Of Photovoltaic Cells
 NPO-16168 B84-10240 01

MECHANICAL DEVICES
 Remotely Operated Gripper Tracks
 Applied Force
 MSC-20241 B84-10159 07

MECHANICAL DRIVES
 Remote Coupling of Electrical
 Connectors
 MSC-20414 B84-10363 07

MEDICAL EQUIPMENT
 Transducers For Heat Research
 NPO-15095 B84-10094 05
 Probe Follower for Moving Blood
 Vessels
 NPO-15898 B84-10321 05
 Photographic Screening for Eye
 Defects
 MFS-27045 B84-10322 05

MEDICAL SERVICES
 Estimating Health Services
 Requirements
 NPO-14151 B84-10098 05

MELTING POINTS
 Rapid Freezing-Point Measurement
 LEW-14019 B84-10279 03

MELTS (CRYSTAL GROWTH)
 Two-Crucible Czochralski Process
 NPO-15110 B84-10170 08
 Improved Melt-Level Control System
 NPO-15900 B84-10192 08
 Reciprocating Crystallizer
 MFS-25948 B84-10196 08

METAL COATINGS
 Preventing Fires in Cryogenic
 Oxidizer Lines
 MFS-19830 B84-10115 06

METAL CUTTING
 Square-Cutting Grinder
 KSC-11257 B84-10199 08

METAL FILMS
 Hot-Dipped Metal Films as Epitaxial
 Substrates
 NPO-15904 B84-10178 08

METAL FOILS
 Brazing Alloys Indicate
 Turbomachinery Temperatures
 MFS-19792 B84-10327 06

MICHELSON INTERFEROMETERS
 Flexible Mirror Mount for Michelson
 Interferometer
 NPO-15746 B84-10066 03

MICROBIOLOGY
 Experimental Ecosystems Sealed in
 Glass
 NPO-15712 B84-10097 05

MICROPHONES
 Microphone Detects Boiler-Tube
 Leaks
 NPO-16027 B84-10348 06

In-Place Calibration of
 Instrumentation Microphones
 ARC-11463 B84-10349 06

MICROSCOPY
 Monitoring Marine Microbial Fouling
 MFS-25928 B84-10096 05

MICROSTRIP TRANSMISSION LINES
 Circularly-Polarized Microstrip
 Antenna
 NPO-15875 B84-10009 01

MICROWAVE COUPLING
 X-Band Strip-Line Power
 Divider/Combiner
 NPO-16086 B84-10002 01
 Magic-T-Coupled Magnetrons
 NPO-15061 B84-10235 01

MICROWAVE SWITCHING
 Light-Activated Microwave Device
 NPO-16112 B84-10234 01

MINING
 Coal-Face Fracture With A
 Two-Phase Liquid
 NPO-15849 B84-10090 04
 Automatic Coal-Mining System
 NPO-15861 B84-10151 07
 Pillar-Trimming System
 NPO-15848 B84-10160 07
 Safety Evaluation Methodology for
 Mining Systems
 NPO-15831 B84-10375 07

MINORITY CARRIERS
 Activated Internal Gettering
 NPO-15530 B84-10316 04

MISALIGNMENT
 X-Ray Determination of Weld
 Misalignment
 MSC-20418 B84-10323 06

MIXTURES
 Eutectic Contact Inks for Solar Cells
 NPO-15171 B84-10305 04

MOLDING MATERIALS
 Vented Compression Molding of
 Granule-Filled Resins
 MFS-25975 B84-10181 08

MOLECULAR BEAM EPITAXY
 Preparing InSb Substrates
 NPO-16127 B84-10317 04

MOLTEN SALTS
 Molten-Salt Electrolysis
 NPO-15535 B84-10320 04

MORPHOLOGY
 Eutectic-Alloy Morphology
 MFS-25937 B84-10084 04

MOTION PERCEPTION
 Probe Follower for Moving Blood
 Vessels
 NPO-15898 B84-10321 05

MOUNTING
 Quick-Change Holder for
 Aeronautical-Research Microphones
 FRC-11072 B84-10347 06
 Solder Bonding for Power
 Transistors
 MSC-20570 B84-10387 08

MULTIPLEXING
 Wire-Identification Instrument
 NPO-15633 B84-10027 02

MULTIPROCESSING (COMPUTERS)
 Controlling Solar-Power Systems
 With Distributed Processors
 NPO-15101 B84-10259 02

MULTISTATIC RADAR
 Bistatic Synthetic-Aperture Radar
 NPO-15619 B84-10272 02

N

NAVIGATION
 Low-Frequency Navigational System
 NPO-15264 B84-10045 02
 Angle-Measurement and Ranging
 System
 MFS-25912 B84-10053 03
 Trajectory Analysis and the Orbit
 Determination
 NPO-15586 B84-10131 06

NETWORK ANALYSIS
 Thermal Radiation Analyzer
 MSC-20448 B84-10133 06

NEUTRALIZERS
 Zero-Net-Charge Air Ionizer
 NPO-15937 B84-10054 03

NEWTON-RAPHSON METHOD
 Cost Considerations in Nonlinear
 Finite-Element Computing
 NPO-16237 B84-10412 09

NICKEL IRON BATTERIES
 Batteries for Electric Vehicles
 NPO-15142 B84-10244 01

NICKEL ZINC BATTERIES
 Batteries for Electric Vehicles
 NPO-15142 B84-10244 01

NOISE PREDICTION
 Predictive Smoothing-Convolution
 Algorithm
 MSC-20604 B84-10419 09

NOISE REDUCTION
 Eliminating False Signals From
 Electromechanical Keyboards
 MSC-20429 B84-10044 02

NORMAL DENSITY FUNCTIONS
 Acoustic Gaussian Far-Field Pattern
 LAR-12967 B84-10051 03

O

O RING SEALS
 Tapered Ring Seal
 LEW-10455 B84-10361 07

OCEAN CURRENTS
 Report on Satellite Radar for
 Detecting Ocean Currents
 NPO-15704 B84-10032 02

ON-LINE SYSTEMS
 Monitoring Performance of Complex
 Systems
 KSC-11273 B84-10031 02

ONBOARD EQUIPMENT
 LRU Voltage Analysis
 MSC-20699 B84-10035 02

OPTICAL COMMUNICATION
 Optical Quantum Receiver For Binary
 Signals
 NPO-15122 B84-10030 02
 Direct-Photon-Detection Communi-
 cations
 NPO-15905 B84-10256 02
 Short-Range Digital Optical Links
 NPO-15999 B84-10269 02

OPTICAL CORRECTION PROCEDURE
 Reversing Optical Damage In LiNbO3
 Switches
 NPO-16239 B84-10227 01

OPTICAL COUPLING
 Stable Optocoupler
 MFS-25927 B84-10226 01
 Multipurpose Photonic Transducers
 NPO-15135 B84-10338 06
 Optical-Fiber-Welding Machine
 NPO-15004 B84-10379 08

Roof Polishing of Optical Fibers
LAR-13070 B84-10380 08
Splicing Efficiently Couples Optical
Fibers
NPO-16294 B84-10403 08

OPTICAL MEASUREMENT

Thermal-Expansion Measurement
MFS-27000 B84-10064 03
Selecting Flatpack Lead-Forming
Dies
MFS-25951 B84-10141 06

OPTICAL MEMORY (DATA STORAGE)

Optical Mass Memory System
Specification
MFS-25592 B84-10047 02

OPTICAL PATHS

A General Optical Systems
Evaluation Program
GSC-12823 B84-10057 03

OPTICAL REFLECTION

Improved Optical Keyboard
NPO-15132 B84-10254 01
Reflecting Schmidt/Littrow Prism
Imaging Spectrometer
NPO-15801 B84-10277 03

OPTICAL TRACKING

Integrated Laser and Light Detector
NPO-15943 B84-10230 01
Laser Rangefinder and Remote
Profilometer
NPO-15865 B84-10278 03

OPTIMIZATION

Algorithm Solves Constrained and
Unconstrained Optimization Problems
MSC-20683 B84-10216 09
More Efficient Structural Design by
Optimality Criteria
NPO-15832 B84-10219 09

OPTOGALVANIC SPECTROSCOPY

Monitoring of Reactive Atmospheric
Species
NPO-15981 B84-10063 03

ORBIT CALCULATION

Trajectory Analysis and the Orbit
Determination
NPO-15586 B84-10131 06

ORBITAL ELEMENTS

Orbital and Geodetic Error Analysis
GSC-12768 B84-10415 09

ORBITAL MECHANICS

Orbital Mechanics Analysis Program
MSC-20700 B84-10132 06

ORIFICES

Contoured Orifice for Silicon-Ribbon
Die
NPO-15126 B84-10394 08

OSCILLATIONS

Convective Oscillations at
Crystal/Melt Interface
MFS-25892 B84-10055 03

OSCILLATORS

Normalizing VFO Frequency by
Non-Powr-of-2 Division
NPO-15330 B84-10049 02
Discriminator Aids Phase-Lock
Acquisition
NPO-14311 B84-10233 01

OUTGASSING

Vacuum Baking To Remove Volatile
Materials
NPO-15648 B84-10080 04

OXIDATION

Inhibiting Wet Oxidation of Ammonia
ARC-11407 B84-10307 04

OXYGEN TENSION

Measuring Absolute Oxygen
Pressure
NPO-16131 B84-10113 06

P**PACKAGING**

Holding Cargo in Place With Foam
MSC-20723 B84-10367 07

PACKET TRANSMISSION

Packet Telemetry and Packet
Telecommand
NPO-16301 B84-10276 02

PANELS

Continuous-Filament Isogrid
Composite Panel
LAR-12975 B84-10344 06
Thermal-Balance Strip for Fluted LFC
Panels
LAR-12991 B84-10345 06
Glass/Epoxy Door Panel for
Automobiles
NPO-15057 B84-10389 08

PARABOLIC REFLECTORS

Determining The Slope Error Of A
Parabolic Reflector
NPO-15713 B84-10280 03
Paraboloidal-Dish Power Modules
NPO-16100 B84-10302 03

PARALLEL FLOW

Evening Flow Distribution Through
Parallel Tubes
MFS-23936 B84-10373 07

PARAMETER IDENTIFICATION

Remote-Imaging Parameters
NPO-14869 B84-10041 02
Retrieval of Geophysical Parameters
From Radiometric Data
NPO-16266 B84-10286 03

PARTICLE INTERACTIONS

Parameters Affecting
Electrophoresis
MFS-25593 B84-10099 05

PARTITIONS (MATHEMATICS)

Orbital and Geodetic Error Analysis
GSC-12768 B84-10415 09

PAYLOAD TRANSFER

Capture-Range Indicator
MFS-28008 B84-10354 06

PEDALS

Safety Pedal for Foot-Operated
Machinery
MSC-20535 B84-10356 07

PELTIER EFFECTS

Faster Response for Memory-Metal
Actuators
NPO-16120 B84-10148 07

PERFORATED SHELLS

Vented Compression Molding of
Granule-Filled Resins
MFS-25975 B84-10181 08

PERFORMANCE PREDICTION

Mathematical Storage-Battery
Models
NPO-15615 B84-10018 01
Cost and Performance of Distributed
Photovoltaic Systems
NPO-16001 B84-10033 02
Safety Evaluation Methodology for
Mining Systems
NPO-15831 B84-10375 07

PERFORMANCE TESTS

Integrated System for Environmental
Simulation
KSC-11274 B84-10065 03

PERMEABILITY

Reducing Liquid Permeation Through
Polymer Sheets
NPO-15802 B84-10089 04

PERT

Software Cost-Estimation Model
NPO-15862 B84-10209 09

PHASE DETECTORS

Temperature-Stabilized Phase
Detector
NPO-15766 B84-10016 01

PHASE ERROR

Convolutionally-Coded Unbalanced
QPSK Systems
NPO-15566 B84-10267 02
Calibrating for Ionospheric Phase
Delays
NPO-15430 B84-10297 03

PHASE LOCKED SYSTEMS

Normalizing VFO Frequency by
Non-Powr-of-2 Division
NPO-15330 B84-10049 02
Discriminator Aids Phase-Lock
Acquisition
NPO-14311 B84-10233 01

PHASE MODULATION

Frequency-Modulation Correlation
Spectrometer
NPO-15558 B84-10061 03

PHASE SHIFT

Estimating Doppler Shifts for
Synthetic-Aperture Radar
NPO-15990 B84-10264 02

PHASED ARRAYS

Semiconductor Laser Phased Array
NPO-15963 B84-10006 01

PHOTODETACHMENT

A Sensitive Infrared Photodetector
NPO-15926 B84-10022 01

PHOTOELECTRIC GENERATORS

Controlling Solar-Power Systems
With Distributed Processors
NPO-15101 B84-10259 02

PHOTOELECTRON SPECTROSCOPY

Electron-Attachment Profiles
NPO-14865 B84-10299 03

PHOTOGRAPHIC EQUIPMENT

Photographic Screening for Eye
Defects
MFS-27045 B84-10322 05

PHOTOMETERS

A Sensitive Infrared Photodetector
NPO-15926 B84-10022 01
Ignition-Spark Detector for Engine
Testing
MFS-19890 B84-10365 07

PHOTONICS

Optical Logic Gates
NPO-15134 B84-10003 01
Direct-Photon-Detection Communi-
cations
NPO-15905 B84-10256 02
Multipurpose Photonic Transducers
NPO-15135 B84-10338 06

PHOTOVOLTAIC CELLS

Stowable Solar-Cell Array
NPO-15893 B84-10020 01
Assessing the Performance of Solar
Arrays
NPO-15277 B84-10070 03
Elastomer Encapsulant for Solar-Cell
Arrays
NPO-15663 B84-10083 04

SUBJECT INDEX

Determining The Life Expectancy of Photovoltaic Systems
NPO-15683 B84-10253 01

PHOTOVOLTAIC CONVERSION
Cost and Performance of Distributed Photovoltaic Systems
NPO-16001 B84-10033 02

PHYSIOCHEMISTRY
Defect Chemistry of Hg_{1-x}Cd_xTe
MFS-25851 B84-10309 04

PINS
Stepped-Pin Clevis Resists Jamming
NPO-15834 B84-10146 07

PIPES (TUBES)
Flexible Liquid-Transport Tube
NPO-15761 B84-10139 06
Holder for Straightening Bent Tubes
MFS-19705 B84-10200 08
High-Pressure Coupling for Open-Ended Tubes
MSC-20451 B84-10326 06

PLASTIC COATINGS
Applying Uniform Polymer Coatings To Microspheres
NPO-16075 B84-10308 04

PLASTIC DEFORMATION
Structural Analysis of Cylindrical Thrust Chambers
LEW-13655 B84-10127 06

PLATES (STRUCTURAL MEMBERS)
Data-Generating Program for ASKA Modeling
MSC-20644 B84-10134 06
Snapping Quick Fastener
NPO-15724 B84-10402 08

PLOTTERS
NASTRAN NASTPLT Plotting Post Processor
GSC-12833 B84-10215 09

PLOTTING
Root-Locus Algorithms
NPO-16154 B84-10221 09

PLUGGING
Tool for Inserting and Removing Tube Plugs
MFS-19871 B84-10364 07

PLUGS
Close-Out Plugs
MFS-19370 B84-10405 08

PNEUMATIC CONTROL
A Positive-Shutoff Fuel Valve
MFS-19779 B84-10145 06

POISSON RATIO
Acquisition of Dynamic Stress/Strain Data
MSC-20589 B84-10122 06

POLARITY
Detecting The Polarity Of Lightning Strikes
NPO-16063 B84-10247 01

POLISHING
Roof Polishing of Optical Fibers
LAR-13070 B84-10380 08

POLYNOMIALS
Predictive Smoothing-Convolution Algorithm
MSC-20604 B84-10419 09

POLYURETHANE FOAM
Polyurethane-Foam Maskant
MFS-19786 B84-10091 04
Measuring Rind Thickness on Polyurethane Foam
MFS-25941 B84-10116 06
Polyurethane Masks Large Areas in Electroplating
MFS-19825 B84-10180 08

POROUS CONTROL
Increasing the Ductility of Electroplated Metals
MFS-19873 B84-10304 04

POROUS PLATES
Pressure-Letdown Plates for Coal Gasifiers
NPO-15965 B84-10077 04

PORTABLE EQUIPMENT
Inert-Gas Electrical Discharge Machining
MFS-19778 B84-10162 07
Collapsible and Deployable Trusses
MFS-25945 B84-10177 08

PORTS (OPENINGS)
X-Band Strip-Line Power Divider/Combiner
NPO-16086 B84-10002 01

POSITION INDICATORS
Capture-Range Indicator
MFS-28008 B84-10354 06

POSITIONING DEVICES (MACHINERY)
Remotely Operated Gripper Tracks Applied Force
MSC-20241 B84-10159 07

POTENTIAL FLOW
Streaming-Potential Studies
MFS-25657 B84-10092 04

POWDER (PARTICLES)
Making Pure Fine-Grained Inorganic Powder
NPO-16398 B84-10086 04

POWER CONDITIONING
Advanced dc-Traction-Motor Control System
NPO-16118 B84-10229 01

POWER EFFICIENCY
Powerline Coupler for Windmill Motor/Generators
MFS-25944 B84-10010 01
Maximum Outputs of Solar Photovoltaic Arrays
NPO-15966 B84-10284 03

POWER MODULES (STS)
Paraboloidal-Dish Power Modules
NPO-16100 B84-10302 03

POWER SUPPLY CIRCUITS
Battery-Operated High-Voltage Power Supply
GSC-12818 B84-10001 01
Lightweight Regulated Power Supply
NPO-15977 B84-10236 01
Controlling Solar-Power Systems With Distributed Processors
NPO-15101 B84-10259 02

PRESSURE CHAMBERS
Beam Window for Pressure Chambers
MFS-25961 B84-10107 06

PRESSURE MEASUREMENT
Measuring Absolute Oxygen Pressure
NPO-16131 B84-10113 06
Gas-Density Gage
MFS-28011 B84-10353 06

PRESSURE REDUCTION
Pressure-Letdown Plates for Coal Gasifiers
NPO-15965 B84-10077 04
Evening Flow Distribution Through Parallel Tubes
MFS-23936 B84-10373 07

PRESSURE REGULATORS
Conserving Purge Gases
MFS-19625 B84-10140 06

PROTECTIVE COATINGS

Inexpensive Pressure-Relief Valve
MSC-20518 B84-10155 07
Kick-Free Pressure Release Valve
NPO-16078 B84-10165 07

PRESSURE SENSORS
Low-Stress Sealing of Pressure Transducers
MFS-19877 B84-10114 06
Dynamic Calibration of Pressure Transducers
LAR-13094 B84-10335 06

PRESTRESSING
Prestressed Thermal-Protection Panels
MSC-20254 B84-10382 08

PREWHIRLING
Prewirl Jet Model
MFS-19826 B84-10136 06

PRIORITIES
Priority-Based Dispatching Algorithm
KSC-11277 B84-10218 09

PRISMS
Composite Spectrometer Prisms
NPO-16060 B84-10300 03

PROCUREMENT MANAGEMENT
Integrated Procurement Management System, Version II

Angle-Measurement and Ranging System
MFS-25912 B84-10053 03

RATIOMETERS
Digital Ratiometer
NPO-15396 B84-10271 02

RAY TRACING
A General Optical Systems Evaluation Program
GSC-12823 B84-10057 03

REACTION TIME
Faster Response for Memory-Metal Actuators
NPO-16120 B84-10148 07

READERS
Managing Software Design and Design Changes
NPO-15331 B84-10416 09

RECEIVERS
Optical Quantum Receiver For Binary Signals
NPO-15122 B84-10030 02
Receiver For Solar Air Turbine
NPO-15124 B84-10052 03

RECOVERY PARACHUTES
Bridle Attachment for Aircraft Spin-Recovery Parachute
LAR-13076 B84-10357 07
Compact Antispin Parachute System
LAR-12979 B84-10358 07

SUBJECT INDEX

REFLECTORS
Improved Ellipsoidal Radiation Furnace
MFS-25933 B84-10102 06
Efficient Reflector Antenna
NPO-16262 B84-10239 01
Acoustic Levitation System
NPO-16146 B84-10406 08

REGRESSION ANALYSIS
Retrieval of Geophysical Parameters From Radiometric Data
NPO-16266 B84-10286 03

REGULATORS
Zero-Net-Charge Air Ionizer
NPO-15937 B84-10054 03

REINFORCEMENT (STRUCTURES)
Aligning Heat-Exchanger Tubes for Assembly
MFS-19857 B84-10182 08
Annular-Tube Reinforcer
MFS-19738 B84-10201 08
Continuous-Filament Isogrid Composite Panel
LAR-12975 B84-10344 06

RELEASING
Stepped-Pin Clevis Resists Jamming
NPO-15834 B84-10146 07

RELIABILITY ANALYSIS
Deriving Strain Modes From Vibrational Tests
MSC-20587 B84-10339 06
Predicting the Reliability of Solar-Cell Interconnections
NPO-15976 B84-10410 09

RELIEF VALVES
Inexpensive Pressure-Relief Valve
MSC-20518 B84-10155 07
Kick-Free Pressure Release Valve
NPO-16078 B84-10165 07

REMOTE HANDLING
Adjustable Mount
LAR-13100 B84-10352 06
Explosive Welding for Remote Applications
LAR-13119 B84-10397 08

REMOTE MANIPULATOR SYSTEM
Proximity Indicator for Remote Manipulator
NPO-15064 B84-10258 02

REMOTE SENSORS
General Design Considerations for Remote Sensors
NPO-15930 B84-10298 03

REMOVAL
Stripping the Sheath From Stranded Cables
NPO-15082 B84-10390 08

RENDEZVOUS GUIDANCE
Orbital Mechanics Analysis Program
MSC-20700 B84-10132 06

REPEATERS
Error Correction for Tandem Data-Transmission Paths
NPO-16125 B84-10417 09

REPORT GENERATORS
Generating Tables of Thermodynamic Properties
MSC-20701 B84-10130 06

RESEARCH MANAGEMENT
Research-Concept Evaluation
LAR-13143 B84-10206 09

RESOLUTION
Measuring Tracking Accuracy of CCD Imagers
NPO-15665 B84-10260 02

RESONANCE

Adjustable Tuning Spring for Bellows Pump
MSC-20512 B84-10378 07

RESONANCE TESTING

Tuning Concept for Resonant Cavities
NPO-15890 B84-10004 01

RIBBONS

Gas Atmospheres Improve Silicon-Ribbon Quality
NPO-15129 B84-10393 08

RING STRUCTURES

Support System for Solar Receivers
NPO-15749 B84-10072 03
Garter Valves
MFS-19899 B84-10359 07
Snapping Quick Fastener
NPO-15724 B84-10402 08

ROBOTS

Automatic Robot Safety Shutdown System
MFS-25969 B84-10368 07

ROLLING MOMENTS

Bridle Attachment for Aircraft Spin-Recovery Parachute
LAR-13076 B84-10357 07

ROOFS

Roof Overhangs for Solar Houses
LAR-13140 B84-10282 03

ROTATING SHAFTS

Measuring the Runout on a Rotary Shaft
MFS-19694 B84-10169 07

ROTATION

Vacuum Seal Permits Limited Rotation
NPO-15115 B84-10150 07

ROTOR BLADES (TURBOMACHINERY)

Turbine-Engine Transient-Rotor Analysis
LEW-13726 B84-10125 06

RUBBER

Predicting Polymer/Liquide Interactions
NPO-14874 B84-10312 04

S**SAFETY DEVICES**

Kick-Free Pressure Release Valve
NPO-16078 B84-10165 07
Guard For Fuse Caps
KSC-11283 B84-10243 01
Safety Pedal for Foot-Operated Machinery
MSC-20535 B84-10356 07
Hinged Shields for Machine Tools
GSC-12915 B84-10366 07
Automatic Robot Safety Shutdown System
MFS-25969 B84-10368 07

SAMPLERS

Sorting Titanium Welding Rods
MSC-20588 B84-10383 08

SAMPLING

Fast Dual Analog-to-Digital Converter
NPO-15006 B84-10026 02

SANDWICH STRUCTURES

Strong, Lightweight Curved Panels
MSC-16278 B84-10399 08

SATELLITE TRANSMISSION

Retrieval of Geophysical Parameters From Radiometric Data
NPO-16266 B84-10286 03

SATURABLE REACTORS

Lightweight Regulated Power Supply
NPO-15977 B84-10236 01

SAWS

Reciprocating Saw for Silicon Wafers
NPO-15863 B84-10171 08

SCHEDULING

Language for Allocation and Network Scheduling
MSC-20633 B84-10212 09

SCRAPERS

Cleaning The Walls of A Silane Reactor
NPO-15851 B84-10318 04

SEALING

Differential Pressure Helps Seal Ball Valve
MSC-20615 B84-10330 06

SEALS (STOPPERS)

Low-Stress Sealing of Pressure Transducers
MFS-19877 B84-10114 06

Vacuum Seal Permits Limited Rotation
NPO-15115 B84-10150 07

Diverter Lip for Seal
MFS-19891 B84-10168 07

Tapered Ring Seal
LEW-10455 B84-10361 07

Close-Out Plugs
MFS-19370 B84-10405 08

SELECTORS

Selecting Flatpack Lead-Forming Dies
MFS-25951 B84-10141 06

SEMICONDUCTOR DEVICES

Light-Activated Microwave Device
NPO-16112 B84-10234 01
Making Cubic Silicon Carbide Semiconductors
LEW-14018 B84-10392 08

SEMICONDUCTOR LASERS

Semiconductor Laser Phased Array
NPO-15963 B84-10006 01
Short-Range Digital Optical Links
NPO-15999 B84-10269 02

SEMICONDUCTORS (MATERIALS)

Upgrading Metallurgical-Grade Silicon
NPO-15076 B84-10074 04

SENSITIVITY

Calculating Closed-Loop Sensitivity to Parameter Variations
NPO-15941 B84-10202 09

SENSORY FEEDBACK

Remotely Operated Gripper Tracks
Applied Force
MSC-20241 B84-10159 07

SEPARATORS

Molten-Salt Electrolysis
NPO-15535 B84-10320 04

SEQUENCING

Digital Sequence Controller
NPO-15725 B84-10012 01

Test Sequences for Reed-Solomon Encoders
NPO-15542 B84-10224 09

SERVICE LIFE

Sealing Mechanical Cryogenic Coolers
NPO-15139 B84-10149 07

SERVOMECHANISMS

Acoustic Position Servosystem
NPO-15936 B84-10407 08

SEWAGE TREATMENT

Aquatic Plants Aid Sewage Filter
MFS-25808 B84-10095 05

SHAFTS (MACHINE ELEMENTS)

Measuring the Runout on a Rotary Shaft
MFS-19694 B84-10169 07

SHALE OIL

Low-Temperature Extraction of Oil From Shale
NPO-15656 B84-10310 04

SHELLS (STRUCTURAL FORMS)

Fabricating Thin-Shell Heat-Transfer Models
LAR-13087 B84-10108 06

SHIELDING

Telescoping Shield for Point-Focusing Solar Concentrators
NPO-16236 B84-10283 03

SHOCK ABSORBERS

Improved Coulomb-Friction Damper
MSC-20505 B84-10332 06

SHORT CIRCUITS

Direct-Current Unbalance Detector
NPO-15978 B84-10007 01

SHUTDOWNS

Automatic Robot Safety Shutdown System
MFS-25969 B84-10368 07

SIGNAL ANALYSIS

Calibrating for Ionospheric Phase Delays
NPO-15430 B84-10297 03

Predictive Smoothing-Convolution Algorithm
MSC-20604 B84-10419 09

SIGNAL GENERATORS

Temperature-Stabilized Phase Detector
NPO-15766 B84-10016 01

SIGNAL PROCESSING

Interactive Digital Signal Processor
GSC-12862 B84-10268 02

SIGNAL TO NOISE RATIOS

Estimates of Small Signal/Noise Ratios
NPO-15653 B84-10257 02

SILANES

Streaming-Potential Studies
MFS-25657 B84-10092 04

SILICON

Upgrading Metallurgical-Grade Silicon
NPO-15076 B84-10074 04

Reciprocating Saw for Silicon Wafers
NPO-15863 B84-10171 08

Production Line for Dendritic-Web Solar Cells
NPO-15098 B84-10172 08

High-Mobility Epitaxial Silicon Wafers
LAR-12846 B84-10175 08

Silicon-Web-Growing Machine
NPO-15870 B84-10193 08

Silicon Formation for Solar Cells
NPO-14973 B84-10313 04

Gas Atmospheres Improve Silicon-Ribbon Quality
NPO-15129 B84-10393 08

Top-Coating Silicon Onto Ceramic
NPO-15125 B84-10395 08

- SILICON CARBIDES**
 Making Cubic Silicon Carbide
 Semiconductors
 LEW-14018 B84-10392 08
- SILICONE RUBBER**
 Silicone-Rubber Tooling for Hollow Panels
 LAR-12974 B84-10346 06
- SINGLE SIDEBAND TRANSMISSION**
 Improved Ultrasonic Resolution Via Analog Technique
 NPO-15707 B84-10039 02
- SINTERING**
 Sintered Lining for Heat-Pipe Evaporator
 NPO-16172 B84-10118 06
 Lightweight High-Temperature Thermal Insulation
 MFS-19754 B84-10306 04
- SIRENS**
 Acoustic Levitation System
 NPO-16146 B84-10406 08
- SLIDING FRICTION**
 Improved Coulomb-Friction Damper
 MSC-20505 B84-10332 06
- SLOPES**
 Determining The Slope Error Of A Parabolic Reflector
 NPO-15713 B84-10280 03
- SOL-GEL PROCESSES**
 Pure Glasses From Multicomponent Gels
 NPO-16160 B84-10079 04
- SOLAR ARRAYS**
 Stowable Solar-Cell Array
 NPO-15893 B84-10020 01
 Assessing the Performance of Solar Arrays
 NPO-15277 B84-10070 03
 Support System for Solar Receivers
 NPO-15749 B84-10072 03
 Testing for Solar-Array Hotspots
 NPO-15596 B84-10073 03
 Maximum Outputs of Solar Photovoltaic Arrays
 NPO-15966 B84-10284 03
 Solar-Array Substrate From Glass-Reinforced Concrete
 NPO-15077 B84-10385 08
 Automated Solar-Panel Fabricator
 NPO-16205 B84-10404 08
- SOLAR CELLS**
 Production Line for Dendritic-Web Solar Cells
 NPO-15098 B84-10172 08
 Hot-Dipped Metal Films as Epitaxial Substrates
 NPO-15904 B84-10178 08
 Automated Texturization of Silicon Wafers
 NPO-15816 B84-10195 08
 Maximum Outputs of Solar Photovoltaic Arrays
 NPO-15966 B84-10284 03
 Eutectic Contact Inks for Solar Cells
 NPO-15171 B84-10305 04
 Predicting the Reliability of Solar-Cell Interconnections
 NPO-15976 B84-10410 09
- SOLAR COLLECTORS**
 Evaluating Solar Collectors
 NPO-15733 B84-10068 03
 Solar-Power System Produces High-Pressure Steam
 NPO-15434 B84-10288 03
 Heat Storage and Transport
 NPO-15468 B84-10291 03
- A Ceramic Heat Exchanger for Solar Receivers
 NPO-15771 B84-10296 03
- SOLAR CONSTANT**
 Ten Thousand Solar Constants Radiometer
 NPO-15922 B84-10290 03
- SOLAR ENERGY**
 Solar-Powered Flywheel
 MFS-25978 B84-10157 07
 Fresnel-Lens/Heat-Storage System
 NPO-16242 B84-10289 03
- SOLAR ENERGY CONVERSION**
 Solar/Thermal Powerplant Simulation
 NPO-15440 B84-10058 03
- SOLAR GENERATORS**
 Point-Focusing Solar-Power Distributed Receivers
 NPO-15578 B84-10294 03
- SOLAR HEATING**
 Solar-Powered Water Distillation
 NPO-15894 B84-10069 03
 Telescoping Shield for Point-Focusing Solar Concentrators
 NPO-16236 B84-10283 03
 Solar-Heated Gasifier
 NPO-15071 B84-10293 03
- SOLAR HOUSES**
 Roof Overhangs for Solar Houses
 LAR-13140 B84-10282 03
- SOLAR OSCILLATIONS**
 Instrumentation for Solar-Oscillation Measurements
 NPO-15687 B84-10287 03
- SOLAR PONDS (HEAT STORAGE)**
 Purification of Solar Ponds
 NPO-15397 B84-10295 03
- SOLAR RADIATION**
 Point-Focusing Solar-Power Distributed Receivers
 NPO-15578 B84-10294 03
- SOLAR RADIATION SHIELDING**
 Solar Shutter
 NPO-15428 B84-10292 03
- SOLDERING**
 Solder Bonding for Power Transistors
 MSC-20570 B84-10387 08
- SOLID STATE DEVICES**
 High-Frequency, High-Power Capacitor
 LEW-14034 B84-10225 01
 Solid-State Latching Relay
 NPO-15028 B84-10250 01
- SOLIDIFICATION**
 Temperature-Gradient Furnace for Solidification Experiments
 MFS-25963 B84-10101 06
 Impurity Effects on Dendritic Growth
 MFS-25672 B84-10197 08
- SOLVENT RETENTION**
 Degreaser Reduces Solvent Loss
 NPO-16128 B84-10360 07
- SOUND GENERATORS**
 In-Place Calibration of Instrumentation Microphones
 ARC-11463 B84-10349 06
- SOURCE PROGRAMS**
 Source Pre-Processor or Interface-Specification Language
 NPO-15814 B84-10413 09
- SPACE COMMERCIALIZATION**
 Reciprocating Crystallizer
 MFS-25948 B84-10196 08
 Acoustic Position Servosystem
 NPO-15936 B84-10407 08
- SPACE PERCEPTION**
 Proximity Indicator for Remote Manipulator
 NPO-15064 B84-10258 02
- SPARK IGNITION**
 Improved Spark-Ignitor Circuitry
 MFS-19751 B84-10019 01
- SPARK MACHINING**
 Inert-Gas Electrical Discharge Machining
 MFS-19778 B84-10162 07
 EDM Electrode for Internal Grooves
 MFS-19733 B84-10369 07
- SPATIAL RESOLUTION**
 Improved Ultrasonic Resolution Via Analog Technique
 NPO-15707 B84-10039 02
 General Design Considerations for Remote Sensors
 NPO-15930 B84-10298 03
- SPECTRA**
 Monitoring of Reactive Atmospheric Species
 NPO-15981 B84-10063 03
- SPECTRAL RESOLUTION**
 General Design Considerations for Remote Sensors
 NPO-15930 B84-10298 03
- SPECTROMETERS**
 Precise Control of a Tunable IR Diode Laser
 NPO-16000 B84-10023 01
 Frequency-Modulation Correlation Spectrometer
 NPO-15558 B84-10061 03
 Reflecting Schmidt/Littrow Prism Imaging Spectrometer
 NPO-15801 B84-10277 03
 Composite Spectrometer Prisms
 NPO-16060 B84-10300 03
- SPECTRORADIOMETERS**
 Ten Thousand Solar Constants Radiometer
 NPO-15922 B84-10290 03
- SPHERICAL SHELLS**
 Applying Uniform Polymer Coatings To Microspheres
 NPO-16075 B84-10308 04
- SPIN REDUCTION**
 Magnetic Despinning System
 MFS-25966 B84-10166 07
 Bridle Attachment for Aircraft Spin-Recovery Parachute
 LAR-13076 B84-10357 07
 Compact Antispin Parachute System
 LAR-12979 B84-10358 07
- SPIN STABILIZATION**
 Linear Boom Actuator
 NPO-16099 B84-10374 07
- SPlicing**
 Splicing Efficiently Couples Optical Fibers
 NPO-16294 B84-10403 08
- SPRAYED COATINGS**
 High-Temperature Coating for Titanium
 NPO-16222 B84-10311 04
- SPRAYING**
 Silicon Formation for Solar Cells
 NPO-14973 B84-10313 04
- STABILITY AUGMENTATION**
 Stable Optocoupler
 MFS-25927 B84-10226 01
- STANDARDIZATION**
 Eddy-Current Reference Standard
 MFS-19824 B84-10138 06

SUBJECT INDEX

STATIC ELECTRICITY

Measuring Air-Ionizer Output
NPO-16058 B84-10242 01

STATIC LOADS

Measuring Side Loads On Bolts
NPO-15705 B84-10137 06

STATISTICAL ANALYSIS

Multiple-User Adaptive-Array
Communication System

Synthetic-Aperture Radars
NPO-15024 B84-10262 02
Synchronized Radar-Target
Simulator
MSC-20240 B84-10263 02

TECHNOLOGY ASSESSMENT

Evaluating Solar Collectors
NPO-15733 B84-10068 03
Research-Concept Evaluation
LAR-13143 B84-10206 09

TELECOMMUNICATION

Intercomputer Communication Link
NPO-13446 B84-10029 02
Multiple-User Adaptive-Array
Communication System
NPO-15765 B84-10037 02

TELEMETRY
Estimates of Small Signal/Noise Ratios
NPO-15653 B84-10257 02
Packet Telemetry and Packet Telecommand
NPO-16301 B84-10276 02

TEMPER (METALLURGY)
Solution Potentials Indicate Aluminum-Alloy Tempers
MFS-25846 B84-10081 04

TEMPERATURE CONTROL
Uniform-Temperature Walls for Cloud Chambers
MFS-25931 B84-10110 06
Maintaining Constant Load Cell Temperature
MSC-20333 B84-10143 06
Minimizing Convection During Crystal Growth
NPO-15811 B84-10194 08
Telescoping Shield for Point-Focusing Solar Concentrators
NPO-16236 B84-10283 03
Solar Shutter
NPO-15428 B84-10292 03

TEMPERATURE GRADIENTS
Temperature-Gradient Furnace for Solidification Experiments
MFS-25963 B84-10101 06
Diverter Lip for Seal
MFS-19891 B84-10168 07

TEMPERATURE MEASUREMENT
Rapid Freezing-Point Measurement
LEW-14019 B84-10279 03
Brazing Alloys Indicate Turbomachinery Temperatures
MFS-19792 B84-10327 06

TEMPERATURE SENSORS
Detection of Gas Slugs in Heat Pipes
NPO-16064 B84-10144 06
Platinum-Resistor Differential Temperature Sensor
NPO-15666 B84-10252 01

TEST FACILITIES
Integrated System for Environmental Simulation
KSC-11274 B84-10065 03
Reliability Studies for Fatigue-Crack Detection
MFS-27031 B84-10085 04

TEST FIRING
Burnwire Simulator
NPO-15883 B84-10021 01

TEST PATTERN GENERATORS
Test Sequences for Reed-Solomon Encoders
NPO-15542 B84-10224 09

TEST STANDS
Adjustable Mount
LAR-13100 B84-10352 06

TEXTURES
Automated Texturization of Silicon Wafers
NPO-15816 B84-10195 08

THERMAL ANALYSIS
Platinum-Resistor Differential Temperature Sensor
NPO-15666 B84-10252 01

THERMAL CONTROL COATINGS

High-Temperature Coating for Titanium
NPO-16222 B84-10311 04

THERMAL DIFFUSIVITY

Determining Thermal Diffusivities of Radiating Specimens
NPO-15436 B84-10325 06

THERMAL EXPANSION

Thermal-Expansion Measurement
MFS-27000 B84-10064 03
Properties of Low-Expansion Laminates
MFS-25859 B84-10082 04
Reducing Thermal Expansivity of Composite Panels
MFS-25793 B84-10117 06
Stabilized Aluminum Titanate
NPO-16227 B84-10319 04

THERMAL INSULATION

Sonically-Welded Thermal Blankets
MFS-25806 B84-10189 08
Lightweight High-Temperature Thermal Insulation
MFS-19754 B84-10306 04
Reusable Thermal Barrier for Insulation Gaps
MSC-20519 B84-10329 06
Heat-Shield Gap Filler
ARC-11310 B84-10408 08

THERMAL PROTECTION

Data-Generating Program for ASKA Modeling
MSC-20644 B84-10134 06
Prestressed Thermal-Protection Panels
MSC-20254 B84-10382 08

THERMAL RADIATION

Thermal Radiation Analyzer
MSC-20448 B84-10133 06

THERMAL REACTORS

Fluidized-Bed Reactor System
NPO-15975 B84-10087 04

THERMAL RESISTANCE

Constant-Operating-Resistance Wire Probe
LAR-13144 B84-10341 06
Bonding Heat-Resistant Fabric to Tile
MSC-20540 B84-10396 08

THERMAL SIMULATION

Solar/Thermal Powerplant Simulation
NPO-15440 B84-10058 03
Maintaining Constant Load Cell Temperature
MSC-20333 B84-10143 06

THERMAL STABILITY

Temperature-Stabilized Phase Detector
NPO-15766 B84-10016 01
Thermal Compensator for Paraboloidal Reflector
NPO-16145 B84-10301 03

THERMISTORS

Temperature Compensation for a Frequency-Modulated Oscillator
MSC-20556 B84-10249 01

THERMOCOUPLES

Tape-Mounted Thermocouple
NPO-16291 B84-10400 08

THERMODYNAMIC COUPLING

Matching Impedances and Modes in Acoustic Levitation
NPO-16022 B84-10184 08

THERMODYNAMIC EFFICIENCY

Two-Phase Wet/Dry Engine for Waste-Heat Recovery
NPO-15621 B84-10164 07

THERMODYNAMIC PROPERTIES

Generating Tables of Thermodynamic Properties
MSC-20701 B84-10130 06

THERMOELECTRIC GENERATORS

Thermoelectric Generator
NPO-16164 B84-10059 03

THICKNESS

Tube-Wall Thickness Detector
MFS-19741 B84-10024 01

THIN WALLS

Tube-Wall Thickness Detector
MFS-19741 B84-10024 01

THREE DIMENSIONAL FLOW

Computation of Three-Dimensional Combustor Performance
LEW-13930 B84-10129 06

THRESHOLD

DETECTORS
(DOSIMETERS)
Quicker Selection of CCD Images
NPO-15345 B84-10274 02

THRUST CHAMBERS

Structural Analysis of Cylindrical Thrust Chambers
LEW-13655 B84-10127 06

TILES

Bonding Heat-Resistant Fabric to Tile
MSC-20540 B84-10396 08

TIME SERIES ANALYSIS

Interactive Digital Signal Processor
GSC-12862 B84-10268 02

TITANATES

Stabilized Aluminum Titanate
NPO-16227 B84-10319 04

TITANIUM ALLOYS

Sorting Titanium Welding Rods
MSC-20588 B84-10383 08

TOOLING

Silicone-Rubber Tooling for Hollow Panels
LAR-12974 B84-10346 06

TOOLS

Magnetic Chuck for Precise Grinding
MFS-19764 B84-10191 08
Annular-Tube Reinforcer
MFS-19738 B84-10201 08
Measuring Clearance Indirectly
MFS-19875 B84-10355 06
Reactionless Winch
MSC-20440 B84-10362 07
Tool for Inserting and Removing Tube Plugs
MFS-19871 B84-10364 07
EDM Electrode for Internal Grooves
MFS-19733 B84-10369 07

TOPOGRAPHY

Contour-Mapping Synthetic-Aperture Radar
NPO-15939 B84-10265 02

TOWING

Compact Antispin Parachute System
LAR-12979 B84-10358 07

TOXIC HAZARDS

Desulfurization of Coal in Fluidized Beds
NPO-15924 B84-10303 04

TRACKING (POSITION)

Low-Frequency Navigational System
NPO-15264 B84-10045 02
Measuring Tracking Accuracy of CCD Imagers
NPO-15665 B84-10260 02

TRAJECTORY ANALYSIS

Trajectory Analysis and the Orbit
Determination
NPO-15586 B84-10131 06

TRANSDUCERS

Direct-Current Unbalance Detector
NPO-15978 B84-10007 01
Transducers For Heat Research
NPO-15095 B84-10094 05
Pulsed-Current Transducers
NPO-14048 B84-10251 01
Multipurpose Photonic Transducers
NPO-15135 B84-10338 06
Fabricating Underwater
Electroacoustic Transducers
LAR-13007 B84-10381 08

TRANSFER FUNCTIONS

Transfer-Function Simulator
NPO-15696 B84-10046 02

TRANSIENT RESPONSE

Transient Response Analysis
MSC-20590 B84-10135 06

TRANSMISSION

Remote-Imaging Parameters
NPO-14869 B84-10041 02

TRANSMISSION LOSS

Error Correction for Tandem
Data-Transmission Paths
NPO-16125 B84-10417 09

TRANSMISSIONS (MACHINE ELEMENTS)

Hybrid-Vehicle Transmission System
NPO-16119 B84-10372 07

TRANSPORT PROPERTIES

Parameters Affecting
Electrophoresis
MFS-25593 B84-10099 05

TRUSSES

Collapsible and Deployable Trusses
MFS-25945 B84-10177 08
Synchronously Deployable Truss
LAR-13117 B84-10350 06
Deployable Geodesic Truss
LAR-13113 B84-10351 06

TUBE HEAT EXCHANGERS

Aligning Heat-Exchanger Tubes for
Assembly
MFS-19857 B84-10182 08
High-Temperature Pump
NPO-15783 B84-10376 07

TUNABLE LASERS

Precise Control of a Tunable IR Diode
Laser
NPO-16000 B84-10023 01

TUNING

Tuning Concept for Resonant
Cavities
NPO-15890 B84-10004 01

TURBINES

Receiver For Solar Air Turbine
NPO-15124 B84-10052 03

TURBULENCE

Turbulent Recirculating Flows in
Isothermal Combustor Geometries
LEW-13894 B84-10128 06

TYPEWRITERS

Improved Optical Keyboard
NPO-15132 B84-10254 01

U**ULTRASONIC WAVE TRANSDUCERS**

Acoustic Gaussian Far-Field Pattern
LAR-12967 B84-10051 03

ULTRASONIC WELDING

Sonically-Welded Thermal Blankets
MFS-25806 B84-10199 08

ULTRASONICS

Improved Ultrasonic Resolution Via
Analog Technique
NPO-15707 B84-10039 02

UMBILICAL CONNECTORS

Remote Coupling of Electrical
Connectors
MSC-20414 B84-10363 07

UNDERWATER ACOUSTICS

Fabricating Underwater
Electroacoustic Transducers
LAR-13007 B84-10381 08

UPGRADING

Upgrading Metallurgical-Grade
Silicon
NPO-15076 B84-10074 04

V**VACUUM CHAMBERS**

Vacuum Seal Permits Limited
Rotation
NPO-15115 B84-10150 07

VACUUM TESTS

High-Frequency, High-Power
Capacitor
LEW-14034 B84-10225 01

VALVES

Differential Pressure Helps Seal Ball
Valve
MSC-20615 B84-10330 06
Garter Valves
MFS-19899 B84-10359 07

VAPOR DEPOSITION

Gravitational Effects on Crystal
Growth by Vapor Transport
NPO-15853 B84-10391 08

VAPORIZERS

Heat-Exchanger Computational
Procedure For Temperature-Dependent
Fouling
LEW-13874 B84-10126 06
Degreaser Reduces Solvent Loss
NPO-16128 B84-10360 07

VIBRATION ISOLATORS

Isolation Mounting for
Charge-Coupled Devices
NPO-15551 B84-10005 01
Active Pulse Suppression of
Structural Vibrations
NPO-15788 B84-10340 06

VIBRATION MODE

Acoustic Levitation With One Driver
NPO-15793 B84-10185 08

VIBRATIONAL STRESS

Deriving Strain Modes From
Vibrational Tests
MSC-20587 B84-10339 06

VIDEO COMMUNICATION

Eye-Movement Tracker Would
Reduce Video Bandwidth
NPO-15432 B84-10043 02

VIEWING

Beam Window for Pressure
Chambers
MFS-25961 B84-10107 06
Imaging System For
High-Temperature Processes
NPO-15945 B84-10273 02

VISCOSITY

Equation for Electrolyte Viscosity
NPO-15096 B84-10076 04

VOLTAGE CONVERTERS (DC TO DC)

Automatic Monitoring of Switching
Power Supplies
MFS-25968 B84-10028 02

VOLTAGE REGULATORS

LRU Voltage Analysis
MSC-20699 B84-10035 02
Lightweight Regulated Power Supply
NPO-15977 B84-10236 01

VOLTMETERS

Circuit for Monitoring Cell Voltages
MFS-25924 B84-10008 01

W**WAFERS**

Reciprocating Saw for Silicon
Wafers
NPO-15863 B84-10171 08
Automatically Dressing Blades in
Silicon-Wafer Cutting
NPO-15745 B84-10174 08
Automated Texturization of Silicon
Wafers
NPO-15816 B84-10195 08
Making Cubic Silicon Carbide
Semiconductors
LEW-14018 B84-10392 08

WARPAGE

Thermal-Balance Strip for Fluted LFC
Panels
LAR-12991 B84-10345 06

WASHERS (SPACERS)

Low-Stress Sealing of Pressure
Transducers
MFS-19877 B84-10114 06

WATER TREATMENT

Solar-Powered Water Distillation
NPO-15894 B84-10069 03
Solar-Thermal-Desalination Study
NPO-15795 B84-10071 03

WAVE DISPERSION

Composite Spectrometer Prisms
NPO-16060 B84-10300 03

WAVEFORMS

Automatic Monitoring of Switching
Power Supplies
MFS-25968 B84-10028 02
Interferometer Measures Broadband
Surface Acoustic Waves
LAR-12966 B84-10050 03
Antenna Subreflector Fed by a Line
Source
MSC-20626 B84-10237 01

WEAR

Measuring the Runout on a Rotary
Shaft
MFS-19694 B84-10169 07

WEATHER

Predicting Severe Duststorms
NPO-14999 B84-10411 09

WEBS (SHEETS)

Silicon-Web-Growing Machine
NPO-15870 B84-10193 08

WEIGHT MEASUREMENT

Maintaining Constant Load Cell
Temperature
MSC-20333 B84-10143 06

WEIGHTING FUNCTIONS

Multiple-User Adaptive-Array
Communication System
NPO-15765 B84-10037 02

WELD STRENGTH

SUBJECT INDEX

WELD STRENGTH

Explosive Welding for Remote
Applications
LAR-13119 B84-10397 08

WELD TESTS

Sorting Titanium Welding Rods
MSC-20588 B84-10383 08

WELDED JOINTS

X-Ray Determination of Weld
Misalignment
MSC-20418 B84-10323 06

WELDING

Two-Pulse Stitch Welding
MFS-25716 B84-10188 08
Sonically-Welded Thermal Blankets
MFS-25806 B84-10189 08
Welding Many Thin Metal Layers
MSC-20698 B84-10398 08

WINCHES

Reactionless Winch
MSC-20440 B84-10362 07

WIND EFFECTS

The Effect of Wind on the
Aerodynamic Resistance of Highway
Vehicles
NPO-14771 B84-10152 07

Over-the-Wing Propeller Reduces
Wing Drag
LAR-13134 B84-10328 06

WIND TUNNEL APPARATUS

Sting-Mounted Flow Survey
Apparatus
LAR-13157 B84-10334 06

WIND TUNNEL TESTS

Surface-Streamline Flow
Visualization
LEW-13875 B84-10105 06

WINDING

Twist-Free Wire Stranding
MFS-25914 B84-10025 01

WINDMILLS (WINDPOWERED MACHINES)

Powerline Coupler for Windmill
Motor/Generators
MFS-25944 B84-10010 01

WINDOWS (APERTURES)

Beam Window for Pressure
Chambers
MFS-25961 B84-10107 06

WING FLAPS

Aerodynamic Analysis of Low-Speed
Wing-Flap Systems
LAR-13116 B84-10124 06

WING LOADING

Over-the-Wing Propeller Reduces
Wing Drag
LAR-13134 B84-10328 06

WING PANELS

Silicone-Rubber Tooling for Hollow
Panels
LAR-12974 B84-10346 06

WIRE WINDING

Twist-Free Wire Stranding
MFS-25914 B84-10025 01

WIRING

Wire-Identification Instrument
NPO-15633 B84-10027 02

WORD PROCESSING

A Visually Oriented Text Editor
NPO-15086 B84-10213 09

X

X RAY FLUORESCENCE

Specimen Holder for Analytical
Electron Microscopes
MSC-20398 B84-10331 06

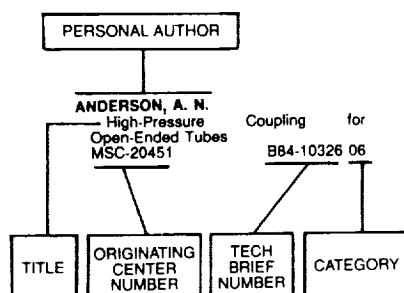

X RAY IMAGERY

Soft-X-Ray Prefilter for Hot, Bright
Objects
NPO-15972 B84-10060 03

X RAY INSPECTION

X-Ray Determination of Weld
Misalignment
MSC-20418 B84-10323 06

Typical Personal Author Index Listing

This index is arranged alphabetically by author. The Tech Brief title is listed followed by the originating Center number, e.g., MSC-20451. The Tech Brief number, e.g., B84-10326, is followed by a two-digit number, e.g., 06, which designates the subject category.

A

ORIGINATING CENTER NUMBER INDEX

INDEX TO NASA TECH BRIEFS

FEBRUARY 1987

Typical Originating Center Number Index Listing

The left hand column identifies the originating Center number, to the right of each originating Center number is the Tech Brief number, e.g., B84-13030, followed by a two-digit number, e.g., 03, which identifies the subject category containing the entire citation.

TECH BRIEF NUMBER INDEX

INDEX TO NASA TECH BRIEFS

FEBRUARY 1987

Typical Tech Brief Number Index Listing

The left hand column identifies the Tech Brief number, e.g., B84-10001, followed by a two-digit number, e.g., 01, which identifies the subject category containing the entire citation. Following the subject category number is the originating Center number.

B84-10001 01	GSC-12818	B84-10045 02	NPO-15264	B84-10110 06	MFS-25931
